be a stream of blots that you associate as being a stream. And then at a certain point they divide, and two lines proceed from it. It could very well be, you see, that an individual could reincarnate as two next time. Or any number you want. Amoeba fashion. But you will see these connections in your blots. Now then the question arises: Is this just your idea or are these connections real? In order to answer that one, all we have to do, is to look out of some sort of pattern formation, that we find not in the situation, that we find a Rorschach blot, but say we are examining the structure of a muscle. We've sliced the muscle and are looking at it carefully with microscopes and things. What do we find? We find that muscle is an enormous conglomeration of cells. But that these cells have patterns in them. Or at any rate, we notice certain areas of their behavior, where they seem to constitute tubes. But what is the difference between the tube's one sees in a cross-section of muscle and the pictures of forms one sees in a Rorschach blot? Just get down to it. What is the difference? You might say that would be a large variation of individual opinion as to the nature of the Rorschach blot patterns. And less division of opinion about how one should interpret muscle patterns. But is that alone enough establish a significant difference between the two situations? Especially when you get down to the micro level, where more and more the molecules, or cells or whatever, are distant from each other. You see, isn't it really remarkable, that at a certain level of magnification we see this as a huge distribution of rather formless things and we can only see what form we make when we go down in magnification, and come back to approaching the normal vision, that we see these vastly scattered blob and globs and globs and globules or whatever, take shape. And is this alteration of magnification anything like a psychological projection? It's very difficult to draw a hard and fast line between making out sensible patterns in the physical world of everyday life on the one hand and interpretive Rorschach blots on the other. Seeing faces in marble. Seeing cities in the clouds. And so on.

So then, what might appear as lines of continuity between the various lives could be said to be there in the sense that there are veins and nerve lines embedded in the cell structure of muscles. But always it's quite clear to us: there is something about the projections we make, of faces into marble, that has a kind of illusion to it. Quite so. And what Buddhist philosophy wants to draw our attention to is that the same kind of illusion is existing in our

attitude to the physical world. We are projecting. But of course creatures of like structure will make the same projections. Just as we look around here and see that we are more or less all the same basic shape. And therefore probably have the same sort of brains inside our heads. We are projecting a more or less similar structure upon the external world. And our agreement about that is the same thing as saying "Well that's the way it is". But you see how relative that is. It is in relation to having a brain system of this particular kind. So. The Westerner may be anxious that his idea about reincarnation is something more than a fantasy. The Oriental, the Buddhist or the Hindu very much hopes it is only a fantasy. And in that case it can be overcome. He can be delivered from a cycle of futility. Only you mustn't understand, again you must understand that too literally. If you want to know what Buddhists really teach on this matter, put it in a very simple way, you get a book by Alexandra David-Néel, called *The Secret Oral Teachings*. Difficult to get hold of, but somebody in this country is going to publish it soon. It is published in India. But I think Lawrence Ferlinghetti is going to publish it. *City Lights*, San Francisco. That book really goes into this and I called, I call it the "I told you so book", because I've often been accused of inventing my own unique brand of Buddhism and hoisting it off on the public as being the real thing. I just have to point them to this book and say: "you see?" Alexandra David-Néel, that's French. DAVID-NEEL. Could say David Neil. So now.

What becomes interesting in this, is that you will pick out the lines of continuity between lives upon what basis? Why, just in the same way as you pick out continuity between tones. By the way they interval to each other. In which case the death interval, the off interval, becomes the significant connecting factor between the on intervals. That's what you do, when you look at patterns of blobs on a wall. You could play with Roland Hall's paintings that way and see all sorts of things in them. And it depends what intervals you find significant that connects what you call the on pieces. See, you've always got off pieces and on pieces. You've got a kind of mosaic. Look into a press photograph with a magnifying glass and you find a mosaic of black and white dots. And so you can, again, you can make the significant connections and as you do you come out with somebody's face. And so in the world, our nerves are very much like the press photograph. When something impinges upon the retinal backdrop of the

eye, it impinges upon a whole lot of rods and cones that are either on or off. The state of a neuron, you see, is that it fires or it doesn't fire. So we've got this press photograph in it. If you work with L.S.D., this becomes very clear. You get a vision sometimes of the world which is positively pointillist, like the paintings of Seurat. Somehow it seems as if your nerve ends had been activated individually. And you become aware of a grainy quality in everything. This could be dismissed as a pure hallucination, but all hallucinations have some basis in our neural structure. You see? They may not be experiences of what we call the objective world, but in any experiment, that turns your consciousness on your consciousness, your senses on your senses, you will get curious things happening. Just as you might get oscillations in electric circuitry. So. It would then be intervals once again. That could be the significant connecting factors in a developmental pattern of an individual through a series of incarnations. But those intervals are illusions. The connection is illusory. But, in a sense, an illusion, to which we Westerners are not really accustomed. Because Maya means illusion in a very complex sense. It means also: creative power. Art. Magic. Calculation in the sense of the calculus. This is difficult for us to understand, you see, the notion, that the world is Maya. Why is it difficult for us to understand that? What is our feeling about saying this is a dream a projection? What's the objection to that idea? Well. I think that that historically at the root of our Western objection to this idea is that it's discussion is to God. It is if to say God did not really create the world as it says in the Bible. But that he only seemed to. But you realize that this is an absolute verbal hang up. It's also question of of values. If the world is real, then I mistake you seriously, and you mistake me seriously. If the world is only a dream then it doesn't matter. You see, if you say it doesn't matter, then you are saying: it's purely spiritual. Like, it's immaterial baby. And you see how we flip around in our use of words. We say something "Oh, that's merely matter."

So, it doesn't matter. Everybody gets completely confused in the way they think about these things because they've never really been thought about really these questions of is it real or is it not real. When an Oriental says of something that it's not real, the first thing he means is, it's not permanent. And so the degree of the quality of change of the smoke like, and dare I say the dream like, because the dream vanishes, you see, and so they say life is

like a dream. As you get older you're more and more aware of the speed at which things change. With the child it seems to be slow. Children easily get bored. As you get older life goes zzzip. Especially if you live in California where you can keep a steady mailing list for more than two months because every two months a quarter of the addresses has changed. And, you know, the bulldozers come in and they change the shape of everything and knock down all the old buildings and up go new ones and then they get knocked down. Or they're so jerry built that they fall apart. But there it goes, you see, and so there is this quality. He means dream like, the thing is in constant flux. But he also means illusion. In showing the extent to which what is going on in this flux is a creation of the perceiving organism. So that by illusion the Oriental also means relative. As in the relationship between the vibrations in the ear. Between the cloud, the sun and the observer, these things produce, a rainbow, sound and so on. But these are relative realities. And so when Buddhist use the word void, Shunyata in Sanskrit, as designating the nature of the world, this should rather be translated relativity than nothingness. But the great scholar Scherbatsky e made this very plain in his book on the Buddha's Nirvana ["The Conception of Buddhist Nirvana"]. It is relativity, that we should think of, rather than our ideas of nonbeing. So from that point of view, as also from the standpoint of quantum mechanics and modern physics, the illusory nature of the world is very clear. It was so much so that one physicist, who was a little daft, used to go round in the most enormous padded shoes for fear of dropping through the atomic structure of the floor.

So one gets this extraordinary sense then, of living in this incredibly real seeming world. Which, the more you analyze it, consists mostly of space. And you come to feel a, shall I say, diaphanous quality about things. That a mountain is only a faster wave and longer lasting rainbow. And that, as the poet said, the hills are shadows and they flow from form to form and nothing stands. And if you will experience this, this kind of creepy feeling you get, when you think that this is just you, and everything about you is just a "phffsht". Here and gone. And swallowed up in space. Why do you say swallowed up? You see, people, poets, people who talk "swallowed by the grave, swallowed into space, disappeared into nothing, gone, vanished into thin, thin air." Why is there an objection to this? Well, one's been taught to object. Because you've been taught to identify with a solid side of

the picture. And to disidentify with the empty side of the picture. But you've been hoaxed and fooled. Because, you, when you die, are not, as it were, gulped out by thin air. You are just as much the thin air as anything else. It's all of a piece, it isn't a fight going on. But everything is represented as a fight. A contest between this side and that. But this is really the whole thing about illusion. Where the ordinary person sees a battle, the enlightened person sees a cooperation between two sides. Have you ever tried to play chess with yourself? And honestly take each side as you play its move against the other one? Or to get to, you know, those swords they have in bars, they stick into olives and martinis. You get two of these swords and fence with yourself and see if you really can stick it into one of your hands and have the other one defend it. This is the most fascinating game and this is the game God is playing, sitting there. Two hands, you know, is good, is evil. Here is Christ and here is Lucifer. And he got really involved in this fight, you see. When he finds out, that if he makes the right hand win all the time there's no point in the game. He has to get into the left hand but in order for there to be a real fight he mustn't let the left hand know what the right hand is doing and vice versa. He explains all the stuff in the Bible. But really, you see, underneath he two hands they join back here like a kind of a horseshoe or like the snake ouroboros, which is always after its own tail. And an aspect of that, not letting your left hand know what your right hand is doing, is the way we identify ourselves with what's inside the skin and not with what's outside it. We identify ourselves as reality with the solid things that we can see and all the rest of space and that's nothing and see. We characteristically take sides in a situation where both sides are aspects of the situation. Who would take this side? Will you have this or that? Choose. SBut the sage doesn't choose, because he says "Well, there's no choice here." He might choose, for the sake of going along, you know, like somebody says "Well, what would you like to do today? We can go into town and do some marketing or we can stay out here and go swimming." You don't care which you do, so you just say one in order to satisfy your host. So. Then behind the explicit battle, there is the implicit agreement. Tweedledum and Tweedledee agreed to have a battle. We agree to differ. If we want to have a sane social order. So cheer up. You may well be so conditioned, just like to feel the fear of the known, even though you know much better. If you have come in life to a point where, say, you have bad teeth through aging, or hardening eyeballs. When you get

awakened and you get satori or anything, it won't make any difference to your teeth or your eyeballs. I've never heard of a case of spiritual healing of somebody's teeth.

So in rather a similar way, there will be certain emotional habits that you have. That will be practically unchangeable. And they settle in as you get older and you have to live with them, just like you have to live with the color of your hair, or whether you've got a funny shaped mouth or something like that. It all goes along. It's part of the pattern that you're in for the time being and will live out. A lot of people go around judging other people and say "Well think they've had some wonderful experience, but they are still sick in some way." as if that was reprehensible. Or they're still lose their tempers a bit. One expects all these things to change. Emotional habits, proof like that. One must get rid of that kind of the Beaver Protestantism. And so. But, you know, what does happen is, although you have fears, anxiety basically, in the face of life and death, nevertheless you can get to a point where it's like having a deep center, which isn't anxious. And above all isn't anxious about being anxious. You say OK so I anxious. And somehow you can tolerate it, you can stand the tension. It's one of the most fascinating things to learn, to hold tension. And not go, when you get a problem, not go rushing off to solve it immediately. Because most problems, when solved in a rush re solved in the wrong way. Especially the emotional problems between people. You have to stand, for example, not being liked, which is a terribly difficult thing for Americans. But what I've said here, I think, about space and about rebirth and so on, you will notice one thing about it all. Nothing that I've said, or understanding anything that I've said doesn't require any kind of what I would call special knowledge. It's all out in front of you. It doesn't require, actually it doesn't require meditation exercises or LSD or anything. It's all out in the open. And the only really essential meditation exercise is stopping thinking. And being able to perceive without conceptualizing what you're looking at. And that's the interior silence. Without which there is really nothing to think about or talk about except thinking and talking. So let's have an intermission.

Individual and the World

If you were told that you were going to be given half an hour's interview with God, and you had the privilege of asking one question- I wonder what you would ask. You might be given some preparation, too. Because, when you think what is your ultimate question, you will probably do many things before you arrive at it and I know many people would discover that they had no question to ask. The situation would be altogether too overwhelming. But many people to whom I've put this problem say that the question that they would ask is: Who am I. And that is something we know very little about. Because whatever it is that we call I is too close for inspection. It's like trying to bite your own teeth. Or to touch the tip of your finger with the tip of the same finger. And although other people can tell you who you are and do, they only see you from the outside, as you see them from the outside. And you don't see from the inside. And so the nature of what is that we call eye is extremely puzzling. Because there is some confusion as to how much of us is I.

We talk in ordinary ways about my body. My feet. And when we go to the dentist to have our teeth fixed, we regard him rather as a mechanic. Like you take your car to the garage so you take your body to the surgeon or the dentist or whatever it is to be fixed how the parts changed or something of that kind. And they're really getting to work on that now. And so the question is when somebody has a heart transplant. That sounds very radical because we say in my heart of hearts. But nowadays most of us seem to feel that whatever it is, that I is, is located in the head. Somewhere behind the eyes and between the ears is the center. And the rest of us is an appendage a vehicle which carries the self around. Now popular speech also reflects the sensation. That I am very different from what we call the other. Other people, other things. Anything that we can become aware of is sort of other. There is an opposition apparently between the knower and the known. And so we talk about facing reality. We talk about coming into this world. As if somehow we didn't belong. As if instead of being leaves growing out of a tree we were a lot of birds that had alighted on bare branches. And it has become common sense for most people living in the twentieth century today to adopt the nineteenth century philosophy of science. Which interprets the physical universe outside human bodies as being a mechanical contraption which is essentially stupid, unfeeling automatic, Composed of mainly geological elements: rocks gases and so forth. And therefore we feel

rather alone and left out of this thing. In contrast with the ideas of Ptolemaic astronomy. Instead of being at the center of the universe. We are on the outer limits of a minor galaxy revolving around an unimportant star. On a small minute ball of rock. And therefore that astronomical way of looking at things is simply overwhelming. It makes us feel not only of no importance but also very much left out. And as a result, that is the common sense of most people living today.

We did of course have a religious view of our nature that we were the children of a loving God who is in charge of this whole operation. But very few people actually believe that anymore. A great many people think they ought to believe it and would like to believe in it but they don't. Most ministers that I know don't believe it but they feel guilty about this because they feel they ought to. But it became implausible. There never was a serious argument against it. It simply became unthinkable in comparison with the dimensions of the universe as we now see it. So having lost a way of looking at the world, an image of the world which gave us some sense of meaning, we now have an image of the world which gives us none at all. And so we feel rather inclined to put up a fight against the whole show. Interestingly enough, when in the nineteenth century we switched our common sense from supernaturalism to naturalism, one would think that a naturalist would be a person who love nature. Just as a materialist ought to be a person who loves material but certainly isn't. With what is called a philosophy of scientific naturalism. Naturalism is used in a negative way. It has nothing to do with being natural it has something to do with being not supernatural, Merely natural. And all sorts of phrases with coined in that epoch which I would call put down phrases. Freud spoke of the basic psychic energy as Libido, which means blind lust. People like Ernst Hegel spoke of the universe as being a manifestation of blind energy. Think of that put down word blind. And therefore we also speak of unconscious mental mechanisms. And the very word unconscious as being the deeper aspect of our psyche is a negative word and a put down word. So is to say what you are functioning as a rational ego with values and with a capacity to love, is simply the epiphenomenon of a purely mechanical process. To bad. So as a result of this so-called naturalism we began to put up the most whopping fight against nature that was ever engaged in. And that fight is an expression of our fury and of a feeling of being left out. So that the

technological experiment which became possible as a result of the mechanical Sciences has largely been conducted in a spirit of rage. And the results are evident all around us. Here in Palm Springs. You are gradually getting all the smog from Los Angeles. This great cloud of poisonous gas put up by a city which is exemplary in this whole civilized world for fouling it's own nest. Perhaps only Calcutta could be a bit worse. Or some such terrible slum. But we have done it by technology. By ruthless beating about of nature without consideration for what the scientist would call our ecology.

Ecology is that aspect of science which deals with the relationship between organisms and their environments. Ecology is the study of the balance of nature. Of the way in which every living being depends upon innumerable other living beings of all species. And also upon inanimate forces. Air, water, temperature, gases, vegetation and all sorts of things. And this is one of the most important sciences that we can possibly study today. Because we are in a position where we realize that we cannot help interfering with the world. To be alive is to interfere. You must interfere. You cannot go back and say: Hands off nature. let's leave it all alone. Because you're stuck with it. Especially once you've started to interfere in a major way. We have so altered our environment that there is no hope for it but to go ahead. But we can, to some extent, change direction. But the only way that I can see of our effectively changing direction is through a transformation of the feeling that we have of our own existence and of what we mean by I. The reason for this is simply that all kinds of intelligent and even powerful people like, say, Laurance Rockefeller who are interested in ecology and in conservation of our natural resources, they can scream their heads off but nobody pays any attention. There is as yet no really serious program at the government level to do anything radical about the pollution of water, the waste of water, pollution of air and the general ravaging of the United States of America. I'm amazed that congressman can pass a bill imposing severe penalties on anyone who burns the American flag, whereas they are responsible for burning that for which the flag stands. The United States as a territory, as a people, and as a biological manifestation. That is an example of our perennial confusion of symbols with realities. Which is in a way at the heart of the trouble because what we think of as I is much more a symbol than it is a reality. The living organism, the whole mind-body, is much more than

anything we mean by I. I largely stands for your personality. Your role in life. And the very word person, as you probably know, comes from the Latin persona. A word originally used for the mask worn by actors in Graeco-Roman drama. That through which sound comes, because the mask had a mega phonic mouth to carry the voice an open air theaters. So when you speak of being a real person, it really means being a genuine fake. Because the personality is only the front. What is behind it? Well of course the organism is behind it. The whole organism. And we must be very careful not to confuse the organism with various symbols that we have for it, because those symbols can be extremely misleading. If we say the organism is the body, what we usually mean by the body, is an impoverished meaning. When we speak of my body that is to say my vehicle, my physical automobile. That is an unenriched meaning of the word body. Because what you really are as a body, as a living organism, is not some sort of separate existence coated by a skin which divides you from the rest of the world. Shakespeare has King John saying to Hubert: "Within this wall of flesh there is a soul counts thee her creditor." Within this wall of flesh: the skin considered as a barrier. When actually, from a biological point of view, the human skin and all skins are osmotic membranes. You know when you get something by osmosis. By sort of soaking it in. So in the same way one's skin is a spongy construction full of holes. Full of communicators, nerve endings. And your skin is simply a vibrating membrane through which the so-called external world flows into you and through you. So that you yourself actually are not so much an entity that moves around in an environment. You are much more like a whirlpool in a stream. And, as you know, the whirlpool is constant only in its doing, that is to say in its whirling. And you could recognize individual whirligigs in a stream. But the water is flowing through them all the time. They are never the same but for a second. And so it is also with us. Or imagine it in another way supposing you have a rope and one foot of the rope is made of hemp, one foot of it is made of cotton, one foot of it is made of silk, one foot of it is made of nylon and so on. Now tie a simple knot in the rope. Now move the knot along the rope. And one minute it will be hemp, the next cotton, next silk, next nylon and so on. Same knot. It will be recognizable as a continuing knot, as that knot. The knot in that rope. But the constitution of it will change as it moves. And so our constitution is changing constantly. Imagine for example a university. The student body undergraduate changes

every four years. The faculty changes every so often. The buildings keep changing more and more. What constitutes the University of California? It certainly isn't the faculty, it isn't the students, it isn't the governors, it isn't the administration, it isn't the buildings. What is it? Why a doing. A behavior. A university-ing process of study and experiment and so on. So it is exactly the same with you. You flow. You are a process.

But how do we draw the line about this process and its relationship to all other processes? We find that a very difficult thing to do the more you think about it. If you really felt with your whole organism, instead of just with that part of it called conscious attention, you would become aware of this flowing fact. And you would get a very strange feeling which at first might frighten you. It is possible of course to have this feeling. And the feeling is like this: You would not be quite sure how to interpret it. You might feel that you yourself were doing everything else that's happening. That would be one way of feeling. The other way of feeling it would be that you are doing nothing at all. But that everything else is doing you. And you would feel completely passive like a puppet on the end of strings. Although on the other hand if you got the feeling that you were doing it all you would feel like God Almighty. It is very easy for our consciousness to slip into this state of sensation. It can happen spontaneously, like measles. It can happen by training. As when someone practices yoga. It can happen chemically as when certain drugs are taken. And one has to be very careful about this feeling because it's enormously easy to misinterpret. Either as being omnipotent, being God in the personal, literal sense. Or as being helpless and merely driven. Now what should be understood is that both these ways of feeling are right. Only they must both be taken together. To be simultaneously omnipotent and helpless. These are two poles, opposite poles of one and the same state. Because the message that is coming through, and that we find difficulty in understanding, because it's contrary to our common sense, contrary to our whole history and conditioning, the message that's coming through is: you as a living organism and all that is going on in your environment constitute a single process. What in physics we would call a unified field. A single process like a pattern but you know any pattern has all sorts of subsidiary wiggles in it. Like the organism itself is a unified pattern but it's full of wiggles. All sorts of tubes and organs and bones and nerves and so on. Working in this way. You know the body

doesn't have a boss. We could pitch a big argument. Who is really the top dog in your body, your stomach or your brain? I can argue for both ways. Let's first argue for the stomach. The stomach is fundamental. That's what eats and eating is the fundamental thing of being alive. By putting food into the stomach it digests it and from there it goes out and energizes everything else. Obviously the stomach is the most important. The hands, the mouth, the feet all exist to serve the stomach and naturally as a final achievement of the stomach is the brain. Evolving later in the evolutionary process as a gadget up there to scavenge around and find stuff for the stomach to eat, that's the function the brain. But now let's take the argument to the side of the brain. The brain says: "Oh no no. I'm not. Just because I arrived late doesn't mean that I'm unimportant. I was being gotten ready for. Because I am the thing that is the flower at the top of this thing. And this tube with stomachs in it and things below was preparing for me and the stomach is my servant. It is doing all the dirty work and getting energy to put currents through my wonderful circuits. So that by the creation of all the goods of the mind of the Arts and Sciences and religion and philosophy and so on I shall be the true head of man. Well both arguments are right. Because you have a relationship between stomach and brain, which is a sort of polarity. The one exists for the other. It's like when you prop up two sticks against each other they will stand up so long as they lean on each other. Take one away and the other collapses. So chop off the head and the stomach is finished. Take out the stomach and the head is finished. So this is the way all organic life proceeds. It's different with mechanical life. Because the mechanism must invariably have a boss. The man who puts the machine together, the person who constructs the computer, who designs it, who asks it questions, who programs it. He is the boss. But organisms don't have bosses. They are essentially, I would say, democratic arrangements. Where, somehow, in a marvelous way, an enormous company of cells are working together. But that isn't the way, the body wasn't sort of: one day a lot of cells all crept to together and said: We are a body. That does sometimes happen in the biological domain, but much rather this: when you watch the gestation of a mammal, you see first of all a very simple little organism. Which swells. And as it swells, it becomes more and more complicated from within. No parts are added, nothing is screwed on, there's no welding done or anything like that. It bulges and of course it does absorb material, but it transforms it. But all of it works together at once like the legs of a

centipede. Like you work all together at once. For, you see, when we come down to it, you think you decide things, but you don't know how you do it.

How do you open and close your hand? And you can decide I will now open my and do it, but you don't know how it's done. And yet in a sense you do know how it's done because you say I know how to open my hand. But you don't know in words. You can't explain it. Still less can you explain how you see, still less can you explain how you are conscious. How are you an ego? Well you don't know because the springs of being conscious, of being an ego are outside the surveillance of consciousness. They're somehow underneath. And that lets the cat out of the bag at once, because you see that what is I is something very very much deeper than the superficial consciousness. And what you call I in the sense of the voluntary willing center, ego, has very little to do with it. You are just a watchman on top of the mast or a radar on a ship that is scanning the environment by conscious attention looking out for trouble. Or looking for food. The real you is much too complicated to think about. Supposing when you woke up in the morning, you had to switch yourself on. That is to say, you had to, by an act of conscious attention, to go through your brain and turn on all the synapses necessary for wakeful life. It'd take you hours. Supposing you really had to be conscious of all the details involved in walking or in breathing or in circulation of the blood. You'd never get around to it. So you see when we inspect the physical world with conscious attention the first thing that strikes us is that the physical world is extraordinarily complicated. How can it possibly be organized. But actually the physical world is not complicated at all. What is complicated is the task of trying to describe it in words. Or of trying to figure it out in numbers. Because that is analogous to the task of, say, removing the water from the Pacific Ocean into the Atlantic with a beer mug. We can only take one mug at a time. And so we say in popular speech you can only think of one thing at a time. That's not exactly true but what it reveals is that thinking, that conscious thought is a kind of calculus in which we understand things bit by bit. And it leads us into the superstition that things really are bits. Now, when you eat chicken of course you have to bite it. And you take it in bits. And to make it easier to bite you order from the grocer a cut up fryer. But you don't get cut up fryers out of eggs. Because you see although we can speak of A

chicken, AN egg, or A body, it is not actually a bit. It hasn't been bitten off except for purposes of thinking. Now.

This is beautifully brought out in a passage from Whitehead, which I will read to you. He is discussing the nineteenth century philosophy of science, which I was just discussing, too. And He's saying in this philosophy: All our impressions of nature are simply products of our minds. Nature gets credit which should in truth be reserved for ourselves. The rose for its sent the nightingale for his song and the sun for his radiance. The poets are entirely mistaken. They should address their lyrics to themselves and should turn them into odes of self congratulation on the excellency of the human mind. Nature is a dull affair. Soundless, scentless, colorless. Merely the hurrying of material, endlessly, meaninglessly. However you disguise it, this is the practical outcome of the characteristic scientific philosophy which closed even the seventeenth century. In the first place we must note its astounding efficiency as a system of concepts for the organization of scientific research. In this respect, it is fully worthy of the genius of the century which produced it. It has held its own as the guiding principle of scientific studies ever since. It is still raining. Every university in the world organizes itself in accordance with it. No alternative system of organizing the pursuit of scientific truth has been suggested. It is not only reigning, but it is without a rival. And yet it is quite unbelievable. This conception of the universe is surely framed in terms of high abstractions and the paradox only arises because we have mistaken our abstractions for concrete realities. He calls that, you see, the fallacy of misplaced concreteness. The attribution, in other words, to our bitty way of thinking to the world which we are biting. That is misplaced concreteness. The separations between things are abstract. They are concepts. In the same way, for example, as lines of latitude and longitude are concepts. Even though a Russian poet has recently made a beautiful poem about the world being like a ball carried in a net bag. But you never expect to trip over the equator when you cross it. And although it is something quite abstract and does not exist in nature, it's extremely useful for purposes of navigation. So in the same way, bit-ing and having words to describe particular events or particular wiggles in the universal pattern are very useful. But they are very dangerous when you confuse things with natural events. Because then you get into this sort of trouble.

The trouble of the sorcerer. The surgeon who is too much of a specialist in one organ runs into that organ and alters it and does what he considers a better mechanical job than the Lord did. But then he discovers to his dismay and the even greater dismay of his patient that the operation has unforeseen consequences in some other part of the organism. Because he didn't realize the connection. When, likewise, we object to certain insect pests. Oh, we say, get rid of them. D.D.T.. So. Then we found we got rid of something else we didn't want to get rid of. And worse still that this insect that we didn't like was doing a job for us in some manner of which weren't aware and we only become aware of it when suddenly we find ourselves covered with another kind of fly altogether, or with some sort of bacteria which this insect kept down. Watch it, watch it, watch it because nature does not consist of separate things which you can just pull out like parts from an engine. Take the case of bees and flowers. Oh, we always use the bees and flowers to explain fundamental things about life but we're going to go deeper than sex this time. Fascinating thing about bees and flowers is they are very different looking things. A flower sits still and blooms and it smells, or stinks to be correct. The bee moves about and buzzes. But they are all one organism. You don't find flowers without bees, you don't find bees without flowers. They are just as much one as your head and your feet which also look very different. So in that sense you see we are one with the incredible complexity of processes and wiggles upon which we depend. Although to say "upon which we depend" is not quite accurate. Because that separates us from it as if I were hanging onto a beam and depending on it. It isn't like that. You don't depend on it, because it depends on you. It's a mutual arrangement. And it isn't that one bit of this sort of came first. Although that sometimes happens. But it's always there in potentiality, what came later. But it's rather in the same way that, when a flower opens, you see all the different petals extending simultaneously. Especially when you watch a fast motion movie of a flower opening. And so in the same way there is a simultaneous arrival, or evolution, of the human organism and the human environment and thus biologists speak about the evolution of an environment as well as the evolution of an organism in it. In other words, human beings could not have appeared on this planet until its temperature had lowered to a certain degree, until the atmosphere contained certain gases as a result of vegetative development. And then the environment became evolved enough for human beings to appear in it. Evolved enough?

I'll say if something further: intelligent enough for the appearance in it of intelligent beings. For your environment is intelligent. Otherwise you couldn't be. You see, as Jesus said, you don't gather figs off thistles or grapes from thorns. You won't get pears off an apple tree. So you won't find people except on a people tree. And this planet, this solar system, this galaxy is people-ing in exactly the same way that an apple tree apples.

Put our existence into verb language, as distinct from noun language, and you're much closer to the point. You see nouns have the difficulty of designating things. Verbs designate process. Now everything is a process, really. When we speak of housing for houses, matting for maps, we're getting there. The Nootka Indians have a language in which there are no nouns. So they say: it houses. And then they add an adverb to show whether it houses religiously, homeily or marketingly. And so they see the world as the flow. What is IT that houses. What is it that rains when we say it is raining. You see we always have a funny idea that to get a verb, that is to say, to get action you have to have an agent. Now this is the most ridiculous idea conceivable. How can a noun start a verb? How can a thing start an event? Because there's no action in a thing. Action can only come from action. Energy from energy. You can't get energy from a concept. Because nouns are all concepts, they're abstract, really. It's only verbs that are concrete. As the world is process. Now, common sense insists that the pattern of the world must be made of something. Because we still think with Aristotle's common sense. Or with the imagery of the Book of Genesis where God made Adam out of the clay. In other words he made a clay figurine and breathed breath into it and it became alive. And so we constantly think that we are made of flesh as a flesh with some sort of stuff like clay out of which you shape bodies or like you make tables out of wood. Are trees made out of wood? What a ridiculous question. Trees are wood. They're not made of wood. And it is simply this artifact thing that gives us the idea of the well being made out of something. It isn't made out of anything. And so when physics tries to investigate what is the stuff of matter, it can't find any. Because you can never talk about anything except a process. You can describe what a process is doing, you can describe the structure, the nature of the dance, whether it's doing a waltz or a mazurka or the frog or whatever it is. Then you can describe that melody, shall we say, what it is performing. But there is nothing doing the performing at all.

There is no stuff out of which it's being done because when you examine stuff you just find more pattern. What you mean by stuff is fuzz. When you look at something with a lens and you're out of focus you see fuzz. But when you come into focus you see structure. Right now the structure is made of all sorts of little lines and things. You can see them and you want to know what they are made of. So you turn up the magnification and for a while you get a lot of fuzz but when you're clear again you see that those little lines are also made of more little lines and more structure. Big patterns have little patterns upon the backs to bite them, and so on. And that's the way it goes. So. Suddenly you feel rather insecure because stuff has disappeared there's a famous story about a physicist who understood this so well, but he always went about in the most enormous padded shoes because he was afraid of falling through the floor. Now look what's happened. Just look and see what has happened to us. If we go through everything that I've been saying, we find, first of all, that the thing that we thought was I is nothing more than a social institution. Just like the equator. Or an inch. And to mistake it, to reify it, as Whitehead would say, is the fallacy of misplaced concreteness. It's a strictly a hallucination. And any certain amount of psychological self-exploration shows this to be the case. But what we are is the organism. And what the organism is is a transactional interchange between the organism and the environment. It's not quite correct to say you're doing it and it's doing you because, you see, Whitehead, in describing the scientific philosophy, saying, for example, that blue is entirely our projection on the sky, he's half right, you see. Those scientists he's talking about are half right. But the part of it that is left out of consideration is this: True, you with your optical nerves and eyes transform the sky into the blue feeling. But without the sky you wouldn't have any optical nerves. It works both ways you see. Without the air whose density gives the blue effect. It's mutual. You do it and it does you. But that's, as I said, a two-way, a clumsy way of talking about: it's all one process, a unified process. And furthermore from this process there has disappeared what we thought was solidity. What we thought was common sense, substance and stuff- it's just pattern. And at once one feels sort of ghostly. As if you could be easily blown away. And that's why the Hindus call the universe the Maya. Which means the illusion. Don't forget illusion is related to the Latin word ludere- to play. So the play. Big act. It also means magic. As in a conjuror's creation of an illusion. It also means creative

power. It also means art. Finally it means the divine power. The Maya of the Lord. Lord is a bad translation of Bhagavan. Just the Divine One. Lord means boss and the Hindus don't do it that way. But now you see, having arranged this general introduction, which I'm afraid will be familiar to some of you who've attended my seminars before; but I've arranged this general introduction to raise the question: All right. If that's the way it is. How on earth are we going to arrange a transformation of man's consciousness so that he'll know it. Not just in theory but something he feels in the same way as you feel what you take to be I at the present moment, confronting an external world. How will you transform that sensation? Because if you don't transform that sensation, you are not ever be fit to use technology. We shall continue to use our technology in a hostile spirit towards the external world and we shall wreck the external world. We're busy doing it now. There is no necessity to abandon technology. We can't adapt. But we can certainly use it in a different spirit. I've just been in the island of Ceylon, which is a garden. A beautiful beautiful place. But it's completely undeveloped from a technical point of view and it's in very bad economic circumstances because nobody wants to buy natural rubber anymore. It has no foreign exchange. It is very peaceful. But the change has got to come. So I discussed with one of the high members of the government the possibility that we could set up in Ceylon an experimental station. Which would serve not only India eventually and Africa, but us, too. A an institute of ecological technology. Where we could in that experimental Island work out ways of production, of mechanization, automation and so on which would not ruin the island. And you have to do that sort of thing with a certain dedication because one of the reasons why we make such a mess with technology. is that the shareholders in any given corporation want to make a fast buck. Now there's nothing wrong, you see, in wanting to be rich. There's nothing at all wrong in being rich, in fact I think the world without rich people would be extraordinarily boring. Point is, you have to understand what riches are. And they are not money. Riches are land, clothes, food, housing, intelligence, energy, skill, iron, forests, gardens- those are riches. But when you're concentrating, you see, only on making the buck. Doesn't occur to you that you're not really getting rich, you're just impoverishing yourself. Like, you know, when you're up up up up up up prices, the value of the dollar goes down down down down down. You're just on a rat race, on a treadmill. The faster it moves, it doesn't get

anywhere. Well it doesn't even stay in the same place. So it is that kind again, you see, this is another example of confusing the symbol with the reality, the fallacy of misplaced concreteness as Whitehead calls it. So we should devote the rest of the seminar to discussing the various ways in which it is proposed that we bring about or assist the bringing about of that change in our perception and conception of our own existence. So that we can feel ourselves the way we are. As distinct from the way in which we've been told to feel ourselves.

MACHINE TRANSCRIPT

ORDER HUMAN TRANSCRIPT

If you were told that you were going to be given half an hour's interview with God, and you had the privilege of asking one question- I wonder what you would ask. You might be given some preparation, too. Because, when you think what is your ultimate question, you will probably do many things before you arrive at it and I know many people would discover that they had no question to ask. The situation would be altogether too overwhelming. But many people to whom I've put this problem say that the question that they would ask is: Who am I. And that is something we know very little about. Because whatever it is that we call I is too close for inspection. It's like trying to bite your own teeth. Or to touch the tip of your finger with the tip of the same finger. And although other people can tell you who you are and do, they only see you from the outside, as you see them from the outside. And you don't see from the inside. And so the nature of what is that we call eye is extremely puzzling. Because there is some confusion as to how much of us is I.

We talk in ordinary ways about my body. My feet. And when we go to the dentist to have our teeth fixed, we regard him rather as a mechanic. Like you take your car to the garage so you take your body to the surgeon or the dentist or whatever it is to be fixed how the parts changed or something of that kind. And they're really getting to work on that now. And so the question is when somebody has a heart transplant. That sounds very radical because we say in my heart of hearts. But nowadays most of us seem to feel that whatever it is, that I is, is located in the head. Somewhere behind the eyes and between the ears is the center. And the rest of us is an appendage a

vehicle which carries the self around. Now popular speech also reflects the sensation. That I am very different from what we call the other. Other people, other things. Anything that we can become aware of is sort of other. There is an opposition apparently between the knower and the known. And so we talk about facing reality. We talk about coming into this world. As if somehow we didn't belong. As if instead of being leaves growing out of a tree we were a lot of birds that had alighted on bare branches. And it has become common sense for most people living in the twentieth century today to adopt the nineteenth century philosophy of science. Which interprets the physical universe outside human bodies as being a mechanical contraption which is essentially stupid, unfeeling automatic, Composed of mainly geological elements: rocks gases and so forth. And therefore we feel rather alone and left out of this thing. In contrast with the ideas of Ptolemaic astronomy. Instead of being at the center of the universe. We are on the outer limits of a minor galaxy revolving around an unimportant star. On a small minute ball of rock. And therefore that astronomical way of looking at things is simply overwhelming. It makes us feel not only of no importance but also very much left out. And as a result, that is the common sense of most people living today.

We did of course have a religious view of our nature that we were the children of a loving God who is in charge of this whole operation. But very few people actually believe that anymore. A great many people think they ought to believe it and would like to believe in it but they don't. Most ministers that I know don't believe it but they feel guilty about this because they feel they ought to. But it became implausible. There never was a serious argument against it. It simply became unthinkable in comparison with the dimensions of the universe as we now see it. So having lost a way of looking at the world, an image of the world which gave us some sense of meaning, we now have an image of the world which gives us none at all. And so we feel rather inclined to put up a fight against the whole show. Interestingly enough, when in the nineteenth century we switched our common sense from supernaturalism to naturalism, one would think that a naturalist would be a person who love nature. Just as a materialist ought to be a person who loves material but certainly isn't. With what is called a philosophy of scientific naturalism. Naturalism is used in a negative way. It has nothing to do with being natural it has something to do with being not

supernatural, Merely natural. And all sorts of phrases with coined in that epoch which I would call put down phrases. Freud spoke of the basic psychic energy as Libido, which means blind lust. People like Ernst Hegel spoke of the universe as being a manifestation of blind energy. Think of that put down word blind. And therefore we also speak of unconscious mental mechanisms. And the very word unconscious as being the deeper aspect of our psyche is a negative word and a put down word. So is to say what you are functioning as a rational ego with values and with a capacity to love, is simply the epiphenomenon of a purely mechanical process. To bad. So as a result of this so-called naturalism we began to put up the most whopping fight against nature that was ever engaged in. And that fight is an expression of our fury and of a feeling of being left out. So that the technological experiment which became possible as a result of the mechanical Sciences has largely been conducted in a spirit of rage. And the results are evident all around us. Here in Palm Springs. You are gradually getting all the smog from Los Angeles. This great cloud of poisonous gas put up by a city which is exemplary in this whole civilized world for fouling it's own nest. Perhaps only Calcutta could be a bit worse. Or some such terrible slum. But we have done it by technology. By ruthless beating about of nature without consideration for what the scientist would call our ecology.

Ecology is that aspect of science which deals with the relationship between organisms and their environments. Ecology is the study of the balance of nature. Of the way in which every living being depends upon innumerable other living beings of all species. And also upon inanimate forces. Air, water, temperature, gases, vegetation and all sorts of things. And this is one of the most important sciences that we can possibly study today. Because we are in a position where we realize that we cannot help interfering with the world. To be alive is to interfere. You must interfere. You cannot go back and say: Hands off nature. let's leave it all alone. Because you're stuck with it. Especially once you've started to interfere in a major way. We have so altered our environment that there is no hope for it but to go ahead. But we can, to some extent, change direction. But the only way that I can see of our effectively changing direction is through a transformation of the feeling that we have of our own existence and of what we mean by I. The reason for this is simply that all kinds of intelligent and even powerful people like,

say, Laurance Rockefeller who are interested in ecology and in conservation of our natural resources, they can scream their heads off but nobody pays any attention. There is as yet no really serious program at the government level to do anything radical about the pollution of water, the waste of water, pollution of air and the general ravaging of the United States of America. I'm amazed that congressman can pass a bill imposing severe penalties on anyone who burns the American flag, whereas they are responsible for burning that for which the flag stands. The United States as a territory, as a people, and as a biological manifestation. That is an example of our perennial confusion of symbols with realities. Which is in a way at the heart of the trouble because what we think of as I is much more a symbol than it is a reality. The living organism, the whole mind-body, is much more than anything we mean by I. I largely stands for your personality. Your role in life. And the very word person, as you probably know, comes from the Latin persona. A word originally used for the mask worn by actors in Graeco-Roman drama. That through which sound comes, because the mask had a mega phonic mouth to carry the voice an open air theaters. So when you speak of being a real person, it really means being a genuine fake. Because the personality is only the front. What is behind it? Well of course the organism is behind it. The whole organism. And we must be very careful not to confuse the organism with various symbols that we have for it, because those symbols can be extremely misleading. If we say the organism is the body, what we usually mean by the body, is an impoverished meaning. When we speak of my body that is to say my vehicle, my physical automobile. That is an unenriched meaning of the word body. Because what you really are as a body, as a living organism, is not some sort of separate existence coated by a skin which divides you from the rest of the world. Shakespeare has King John saying to Hubert: "Within this wall of flesh there is a soul counts thee her creditor." Within this wall of flesh: the skin considered as a barrier. When actually, from a biological point of view, the human skin and all skins are osmotic membranes. You know when you get something by osmosis. By sort of soaking it in. So in the same way one's skin is a spongy construction full of holes. Full of communicators, nerve endings. And your skin is simply a vibrating membrane through which the so-called external world flows into you and through you. So that you yourself actually are not so much an entity that moves around in an environment. You are much more like a whirlpool in a

stream. And, as you know, the whirlpool is constant only in its doing, that is to say in its whirling. And you could recognize individual whirlpools in a stream. But the water is flowing through them all the time. They are never the same but for a second. And so it is also with us. Or imagine it in another way supposing you have a rope and one foot of the rope is made of hemp, one foot of it is made of cotton, one foot of it is made of silk, one foot of it is made of nylon and so on. Now tie a simple knot in the rope. Now move the knot along the rope. And one minute it will be hemp, the next cotton, next silk, next nylon and so on. Same knot. It will be recognizable as a continuing knot, as that knot. The knot in that rope. But the constitution of it will change as it moves. And so our constitution is changing constantly. Imagine for example a university. The student body undergraduate changes every four years. The faculty changes every so often. The buildings keep changing more and more. What constitutes the University of California? It certainly isn't the faculty, it isn't the students, it isn't the governors, it isn't the administration, it isn't the buildings. What is it? Why a doing. A behavior. A university-ing process of study and experiment and so on. So it is exactly the same with you. You flow. You are a process.

But how do we draw the line about this process and its relationship to all other processes? We find that a very difficult thing to do the more you think about it. If you really felt with your whole organism, instead of just with that part of it called conscious attention, you would become aware of this flowing fact. And you would get a very strange feeling which at first might frighten you. It is possible of course to have this feeling. And the feeling is like this: You would not be quite sure how to interpret it. You might feel that you yourself were doing everything else that's happening. That would be one way of feeling. The other way of feeling it would be that you are doing nothing at all. But that everything else is doing you. And you would feel completely passive like a puppet on the end of strings. Although on the other hand if you got the feeling that you were doing it all you would feel like God Almighty. It is very easy for our consciousness to slip into this state of sensation. It can happen spontaneously, like measles. It can happen by training. As when someone practices yoga. It can happen chemically as when certain drugs are taken. And one has to be very careful about this feeling because it's enormously easy to misinterpret. Either as being omnipotent, being God in the personal, literal sense. Or as being helpless

and merely driven. Now what should be understood is that both these ways of feeling are right. Only they must both be taken together. To be simultaneously omnipotent and helpless. These are two poles, opposite poles of one and the same state. Because the message that is coming through, and that we find difficulty in understanding, because it's contrary to our common sense, contrary to our whole history and conditioning, the message that's coming through is: you as a living organism and all that is going on in your environment constitute a single process. What in physics we would call a unified field. A single process like a pattern but you know any pattern has all sorts of subsidiary wiggles in it. Like the organism itself is a unified pattern but it's full of wiggles. All sorts of tubes and organs and bones and nerves and so on. Working in this way. You know the body doesn't have a boss. We could pitch a big argument. Who is really the top dog in your body, your stomach or your brain? I can argue for both ways. Let's first argue for the stomach. The stomach is fundamental. That's what eats and eating is the fundamental thing of being alive. By putting food into the stomach it digests it and from there it goes out and energizes everything else. Obviously the stomach is the most important. The hands, the mouth, the feet all exist to serve the stomach and naturally as a final achievement of the stomach is the brain. Evolving later in the evolutionary process as a gadget up there to scavenge around and find stuff for the stomach to eat, that's the function the brain. But now let's take the argument to the side of the brain. The brain says: "Oh no no. I'm not. Just because I arrived late doesn't mean that I'm unimportant. I was being gotten ready for. Because I am the thing that is the flower at the top of this thing. And this tube with stomachs in it and things below was preparing for me and the stomach is my servant. It is doing all the dirty work and getting energy to put currents through my wonderful circuits. So that by the creation of all the goods of the mind of the Arts and Sciences and religion and philosophy and so on I shall be the true head of man. Well both arguments are right. Because you have a relationship between stomach and brain, which is a sort of polarity. The one exists for the other. It's like when you prop up two sticks against each other they will stand up so long as they lean on each other. Take one away and the other collapses. So chop off the head and the stomach is finished. Take out the stomach and the head is finished. So this is the way all organic life proceeds. It's different with mechanical life. Because the mechanism must invariably have a boss. The man who puts the machine

together, the person who constructs the computer, who designs it, who asks it questions, who programs it. He is the boss. But organisms don't have bosses. They are essentially, I would say, democratic arrangements. Where, somehow, in a marvelous way, an enormous company of cells are working together. But that isn't the way, the body wasn't sort of: one day a lot of cells all crept together and said: We are a body. That does sometimes happen in the biological domain, but much rather this: when you watch the gestation of a mammal, you see first of all a very simple little organism. Which swells. And as it swells, it becomes more and more complicated from within. No parts are added, nothing is screwed on, there's no welding done or anything like that. It bulges and of course it does absorb material, but it transforms it. But all of it works together at once like the legs of a centipede. Like you work all together at once. For, you see, when we come down to it, you think you decide things, but you don't know how you do it.

How do you open and close your hand? And you can decide I will now open my hand and do it, but you don't know how it's done. And yet in a sense you do know how it's done because you say I know how to open my hand. But you don't know in words. You can't explain it. Still less can you explain how you see, still less can you explain how you are conscious. How are you an ego? Well you don't know because the springs of being conscious, of being an ego are outside the surveillance of consciousness. They're somehow underneath. And that lets the cat out of the bag at once, because you see that what is I is something very very much deeper than the superficial consciousness. And what you call I in the sense of the voluntary willing center, ego, has very little to do with it. You are just a watchman on top of the mast or a radar on a ship that is scanning the environment by conscious attention looking out for trouble. Or looking for food. The real you is much too complicated to think about. Supposing when you woke up in the morning, you had to switch yourself on. That is to say, you had to, by an act of conscious attention, to go through your brain and turn on all the synapses necessary for wakeful life. It'd take you hours. Supposing you really had to be conscious of all the details involved in walking or in breathing or in circulation of the blood. You'd never get around to it. So you see when we inspect the physical world with conscious attention the first thing that strikes us is that the physical world is extraordinarily complicated. How can it possibly be organized. But actually the physical

world is not complicated at all. What is complicated is the task of trying to describe it in words. Or of trying to figure it out in numbers. Because that is analogous to the task of, say, removing the water from the Pacific Ocean into the Atlantic with a beer mug. We can only take one mug at a time. And so we say in popular speech you can only think of one thing at a time. That's not exactly true but what it reveals is that thinking, that conscious thought is a kind of calculus in which we understand things bit by bit. And it leads us into the superstition that things really are bits. Now, when you eat chicken of course you have to bite it. And you take it in bits. And to make it easier to bite you order from the grocer a cut up fryer. But you don't get cut up fryers out of eggs. Because you see although we can speak of A chicken, AN egg, or A body, it is not actually a bit. It hasn't been bitten off except for purposes of thinking. Now.

This is beautifully brought out in a passage from Whitehead, which I will read to you. He is discussing the nineteenth century philosophy of science, which I was just discussing, too. And He's saying in this philosophy: All our impressions of nature are simply products of our minds. Nature gets credit which should in truth be reserved for ourselves. The rose for its sent the nightingale for his song and the sun for his radiance. The poets are entirely mistaken. They should address their lyrics to themselves and should turn them into odes of self congratulation on the excellency of the human mind. Nature is a dull affair. Soundless, scentless, colorless. Merely the hurrying of material, endlessly, meaninglessly. However you disguise it, this is the practical outcome of the characteristic scientific philosophy which closed even the seventeenth century. In the first place we must note its astounding efficiency as a system of concepts for the organization of scientific research. In this respect, it is fully worthy of the genius of the century which produced it. It has held its own as the guiding principle of scientific studies ever since. It is still raining. Every university in the world organizes itself in accordance with it. No alternative system of organizing the pursuit of scientific truth has been suggested. It is not only reigning, but it is without a rival. And yet it is quite unbelievable. This conception of the universe is surely framed in terms of high abstractions and the paradox only arises because we have mistaken our abstractions for concrete realities. He calls that, you see, the fallacy of misplaced concreteness. The attribution, in other words, to our bitty way of thinking to the world which we are biting.

That is misplaced concreteness. The separations between things are abstract. They are concepts. In the same way, for example, as lines of latitude and longitude are concepts. Even though a Russian poet has recently made a beautiful poem about the world being like a ball carried in a net bag. But you never expect to trip over the equator when you cross it. And although it is something quite abstract and does not exist in nature, it's extremely useful for purposes of navigation. So in the same way, bit-ing and having words to describe particular events or particular wiggles in the universal pattern are very useful. But they are very dangerous when you confuse things with natural events. Because then you get into this sort of trouble.

The trouble of the sorcerer. The surgeon who is too much of a specialist in one organ runs into that organ and alters it and does what he considers a better mechanical job than the Lord did. But then he discovers to his dismay and the even greater dismay of his patient that the operation has unforeseen consequences in some other part of the organism. Because he didn't realize the connection. When, likewise, we object to certain insect pests. Oh, we say, get rid of them. D.D.T.. So. Then we found we got rid of something else we didn't want to get rid of. And worse still that this insect that we didn't like was doing a job for us in some manner of which weren't aware and we only become aware of it when suddenly we find ourselves covered with another kind of fly altogether, or with some sort of bacteria which this insect kept down. Watch it, watch it, watch it because nature does not consist of separate things which you can just pull out like parts from an engine. Take the case of bees and flowers. Oh, we always use the bees and flowers to explain fundamental things about life but we're going to go deeper than sex this time. Fascinating thing about bees and flowers is they are very different looking things. A flower sits still and blooms and it smells, or stinks to be correct. The bee moves about and buzzes. But they are all one organism. You don't find flowers without bees, you don't find bees without flowers. They are just as much one as your head and your feet which also look very different. So in that sense you see we are one with the incredible complexity of processes and wiggles upon which we depend. Although to say "upon which we depend" is not quite accurate. Because that separates us from it as if I were hanging onto a beam and depending on it. It isn't like that. You don't depend on it, because it depends on you. It's a

mutual arrangement. And it isn't that one bit of this sort of came first. Although that sometimes happens. But it's always there in potentiality, what came later. But it's rather in the same way that, when a flower opens, you see all the different petals extending simultaneously. Especially when you watch a fast motion movie of a flower opening. And so in the same way there is a simultaneous arrival, or evolution, of the human organism and the human environment and thus biologists speak about the evolution of an environment as well as the evolution of an organism in it. In other words, human beings could not have appeared on this planet until its temperature had lowered to a certain degree, until the atmosphere contained certain gases as a result of vegetative development. And then the environment became evolved enough for human beings to appear in it. Evolved enough? I'll say if something further: intelligent enough for the appearance in it of intelligent beings. For your environment is intelligent. Otherwise you couldn't be. You see, as Jesus said, you don't gather figs off thistles or grapes from thorns. You won't get pears off an apple tree. So you won't find people except on a people tree. And this planet, this solar system, this galaxy is people-ing in exactly the same way that an apple tree apples.

Put our existence into verb language, as distinct from noun language, and you're much closer to the point. You see nouns have the difficulty of designating things. Verbs designate process. Now everything is a process, really. When we speak of housing for houses, matting for maps, we're getting there. The Nootka Indians have a language in which there are no nouns. So they say: it houses. And then they add an adverb to show whether it houses religiously, homeily or marketingly. And so they see the world as the flow. What is IT that houses. What is it that rains when we say it is raining. You see we always have a funny idea that to get a verb, that is to say, to get action you have to have an agent. Now this is the most ridiculous idea conceivable. How can a noun start a verb? How can a thing start an event? Because there's no action in a thing. Action can only come from action. Energy from energy. You can't get energy from a concept. Because nouns are all concepts, they're abstract, really. It's only verbs that are concrete. As the world is process. Now, common sense insists that the pattern of the world must be made of something. Because we still think with Aristotle's common sense. Or with the imagery of the Book of Genesis where God made Adam out of the clay. In other words he made a clay

figurine and breathed breath into it and it became alive. And so we constantly think that we are made of flesh as a flesh with some sort of stuff like clay out of which you shape bodies or like you make tables out of wood. Are trees made out of wood? What a ridiculous question. Trees are wood. They're not made of wood. And it is simply this artifact thing that gives us the idea of the well being made out of something. It isn't made out of anything. And so when physics tries to investigate what is the stuff of matter, it can't find any. Because you can never talk about anything except a process. You can describe what a process is doing, you can describe the structure, the nature of the dance, whether it's doing a waltz or a mazurka or the frog or whatever it is. Then you can describe that melody, shall we say, what it is performing. But there is nothing doing the performing at all. There is no stuff out of which it's being done because when you examine stuff you just find more pattern. What you mean by stuff is fuzz. When you look at something with a lens and you're out of focus you see fuzz. But when you come into focus you see structure. Right now the structure is made of all sorts of little lines and things. You can see them and you want to what are they made of. So you turn up the magnification and for a while you get a lot of fuzz but when you're clear again you see that those little lines are also made of more little lines and more structure. Big patterns have little patterns upon the backs to bite them, and so on. And that's the way it goes. So. Suddenly you feel rather insecure because stuff has disappeared there's a famous story about a physicist who understood this so well, but he always went about in the most enormous padded shoes because he was afraid of falling through the floor. Now look what's happened. Just look and see what has happened to us. If we go through everything that I've been saying, we find, first of all, that the thing that we thought was I is nothing more than a social institution. Just like the equator. Or an inch. And to mistake it, to reify it, as Whitehead would say, is the fallacy of misplaced concreteness. It's a strictly a hallucination. And any certain amount of psychological self-exploration shows this to be the case. But what we are is the organism. And what the organism is is a transactional interchange between the organism and the environment. It's not quite correct to say you're doing it and it's doing you because, you see, Whitehead, in describing the scientific philosophy, saying, for example, that blue is entirely our projection on the sky, he's half right, you see. Those scientists he's talking about are half right. But the part of it that is left out of

consideration is this: True, you with your optical nerves and eyes transform the sky into the blue feeling. But without the sky you wouldn't have any optical nerves. It works both ways you see. Without the air whose density gives the blue effect. It's mutual. You do it and it does you. But that's, as I said, a two-way, a clumsy way of talking about: it's all one process, a unified process. And furthermore from this process there has disappeared what we thought was solidity. What we thought was common sense, substance and stuff- it's just pattern. And at once one feels sort of ghostly. As if you could be easily blown away. And that's why the Hindus call the universe the Maya. Which means the illusion. Don't forget illusion is related to the Latin word ludere- to play. So the play. Big act. It also means magic. As in a conjuror's creation of an illusion. It also means creative power. It also means art. Finally it means the divine power. The Maya of the Lord. Lord is a bad translation of Bhagavan. Just the Divine One. Lord means boss and the Hindus don't do it that way. But now you see, having arranged this general introduction, which I'm afraid will be familiar to some of you who've attended my seminars before; but I've arranged this general introduction to raise the question: All right. If that's the way it is. How on earth are we going to arrange a transformation of man's consciousness so that he'll know it. Not just in theory but something he feels in the same way as you feel what you take to be I at the present moment, confronting an external world. How will you transform that sensation? Because if you don't transform that sensation, you are not ever be fit to use technology. We shall continue to use our technology in a hostile spirit towards the external world and we shall wreck the external world. We're busy doing it now. There is no necessity to abandon technology. We can't adapt. But we can certainly use it in a different spirit. I've just been in the island of Ceylon, which is a garden. A beautiful beautiful place. But it's completely undeveloped from a technical point of view and it's in very bad economic circumstances because nobody wants to buy natural rubber anymore. It has no foreign exchange. It is very peaceful. But the change has got to come. So I discussed with one of the high members of the government the possibility that we could set up in Ceylon an experimental station. Which would serve not only India eventually and Africa, but us, too. A an institute of ecological technology. Where we could in that experimental Island work out ways of production, of mechanization, automation and so on which would not ruin the island. And you have to do

that sort of thing with a certain dedication because one of the reasons why we make such a mess with technology. is that the shareholders in any given corporation want to make a fast buck. Now there's nothing wrong, you see, in wanting to be rich. There's nothing at all wrong in being rich, in fact I think the world without rich people would be extraordinarily boring. Point is, you have to understand what riches are. And they are not money. Riches are land, clothes, food, housing, intelligence, energy, skill, iron, forests, gardens- those are riches. But when you're concentrating, you see, only on making the buck. Doesn't occur to you that you're not really getting rich, you're just impoverishing yourself. Like, you know, when you're up up up up up prices, the value of the dollar goes down down down down down. You're just on a rat race, on a treadmill. The faster it moves, it doesn't get anywhere. Well it doesn't even stay in the same place. So it is that kind again, you see, this is another example of confusing the symbol with the reality, the fallacy of misplaced concreteness as Whitehead calls it. So we should devote the rest of the seminar to discussing the various ways in which it is proposed that we bring about or assist the bringing about of that change in our perception and conception of our own existence. So that we can feel ourselves the way we are. As distinct from the way in which we've been told to feel ourselves.

So, this morning was explaining the problem of the relation of the individual to the world, discussing it very largely in the terms of twentieth century science. And showing that there was a wide discrepancy between the organism-environment relationship as described in science and the subjective feeling of what it is to be an individual human being. And that the ordinary sensation we have of being an individual ego, confronting an alien and external world is a hallucination. And a dangerous hallucination because it leads to our using technology in a way that is antagonistic to the outside world and results in our destroying the very features of the world upon which we depend for our lives. We are polluting the world. And so it becomes necessary to find ways in which we can change the basic sensation of existence. And that therefore brings in some rather outlandish subjects. Because there is not within the tradition of Western culture any well known way of doing this. What do we have available? Well we have religion. Which is supposed in some respects to be capable of this. And we have

psychiatry. I don't know what else. Religion in the West is a peculiarly problematic thing. Because it's extremely talkative. It gives us a great deal of advice, many commandments, but it doesn't really tell us how to do what it tells us to do. It has been carefully worked over and statisticians of checked it. That way if you go through the sermon topics throughout the United States, that the vast majority of them are exaltations to goodness. That is to say, they are sermons about moral behavior. Usually within a rather restricted sphere of moral behavior. When we say of a certain person that he is living in sin, what do we mean by that? We would very rarely say of a crooked bookie that he is living in sin. You are much more liable to say it of somebody who's got an irregular sexual relationship. Well the fact of the matter is that, with some exceptions, the Christian churches and the Jewish synagogues are family and sexual regulation societies. And precious little else. We used to have, when I was school, a preacher who, came I don't know who he was aware he came from, but he came once a year. And he always preached a sermon, which had in it the refrain: "drink gambling and immorality!" Immorality only meant one thing. So. But the point is that the emphasis of preaching... Protestants, you see, when they go to church, mostly go to a preaching session. Catholics receive sacraments, Protestants do occasionally. But Catholics, when you get through the sacrament and you listen to what the priest has to say, he's usually raising money. And, you know, or saying something like: "This year it'll be a mortal sin not to send your child to church school." Things of this kind. So everybody knows that they ought to be good and unselfish and so on. We all recognize that as a highly reasonable idea, but nobody feels like it. Because if you feel that you are a separate ego, it must necessarily follow that your conduct is egocentric. And egotistic. There's no other way about it. If you feel that you don't love someone then no amount of pretense can make you love them. You cannot possibly love anyone out of a sense of duty. And if you do: Watch out! You'll start hating them. They'll start hating you in a secret and concealed way.

The relationships between husbands and wives and parents and children are absolutely haunted with fake love. It stirs up resentment and it leads people to expect things of you which you're never going to come through with. If I say, out of feeling, that I really have a solemn duty to love so-and- so and therefore, in the attempt to trap myself into the fulfillment of this duty, I

make rash promises, and I'm not going to fulfill them and the person is going to be terribly let down when I don't. So it's as if anything is a sin, it is emotional dishonesty. Saying I love you when I don't. Well of course your mother always told you: we all have to do certain things we don't feel like doing. Maybe. But let's make no bones about it. When somebody says to me: would you like to go out and to the market and bring it back so-and-so, I will answer: No I wouldn't but I will. And we need that sort of exchange between each other. Because we put children in awful positions with faking up their feelings for them by telling a child who simply enraged and mad that he's tired. Of by saying, you know, "what nice boy would like to clean the blackboard?" All this sort of thing you see leads to emotional dishonesty. So the problem then is this. That, when people preach moral behavior, and then out of a sense of guilt or out of a sense of fear, people try to be good, that is to say to do those things that are preached, all it does is it turns them into hypocrites. Preaching is a hypocrisy creating institution in that sense because it does not transform the consciousness of the individual. If, by any chance, consciousness could be so transformed that one is no longer felt as a separate ego, then you would not have to be so egotistic. If there is a way, in other words, of generating love within human beings as a kind of constant attitude to the environment, that is going to be far more effective in bringing about unselfish behavior than anything else. That's our problem, you see, to do just that. And no amount of talk is going to do it. Because it depends on something more happening than merely understanding words. Or even seeing the theoretical reasonableness of certain lines of conduct. We need a bomb under us, rather than intellectual persuasion. But church religion as we know it in the West doesn't provide the bomb. It's very demure, decorous. Except a negro revivals. Or Pentecostal outbursts. But no person of education and taste would attend such things. Bishop Pike was telling me the other day a very funny story which was that he's run into an awful lot of trouble with the trustees when he was bishop of California because he espoused some rather controversial causes and they began cutting down their contributions to the cathedral. But then they started to realize that if they did that have nowhere for their daughters to be married. Because they couldn't possibly go to the Methodist Church or the Pentecostal church. Because that with unbelievably low class. She either has to go to the Episcopal or the Presbyterian Church. Or you might be a Roman Catholic, which is the sort of a different thing, it's sort of

an Italian church. Or go to the synagogue. But the problem, you see, is therefore: Our churches are awfully nice and demure, but they're talking shops. So much so that when in any ordinary church service there's a moment of silence, it's invariably an awkward silence, unless it's a Quaker meeting. And so what happens is organists have a technique of what they call inkling. They improvise on the theme of the last hymn that was sung while there's a silence in which the Minister has forgotten his notes or there was some hitch in the ritual. And also, you see, when you look at the design of a church. It's perfectly clear that a Protestant church is a courtroom. It has in it boxes that are like witness boxes and jury boxes, pews, and the minister wears the same robe as a judge. Exactly the same robe. And everybody goes there and they look at the back of each other's necks and they smell of mothballs. Well that's no scene for anything to happen. You know, we're just not with it.

So it is a result of this sort of spiritual starvation, that enormous numbers of people, and now phenomenal numbers of young people, have become interested in having a religious expression of some completely different kind. But why is it that things that we have had that were in their own way exuberant, like holy rollers and Moral Re-armament, Foursquare gospel, Salvation Army hymn sings. All that seems awfully irrelevant, especially to the young of today. Why is it that, if you go to most people who have had a college education and say to them: Have you made Jesus Christ your personal savior? That they cringe. That that's somehow like making an indecent remark. Has the same sort of ill effect. Why is it that such phrases as "our heavenly Father", "our Lord Jesus Christ", "our very dear Lord", all these expressions give people the heebie-jeebies. Why does that happen? What does it do? I'm an experience one, I know all about it. I was a university chaplain. And I know all the problems in trying to communicate with intelligent college people. And more and more of us are just that. Face it, the university is turning out thousands and thousands and thousands of children. It's getting worse all the time. Well, go to Japan. And you'll find that the young Japanese have just the same feelings about Buddhism. You ask a young Japanese today: What's your religion? And he will say: my parents are Bhuddists. Or even: My parents are Christian. He has none. Because to him, the activity of religion is completely meaningless. And he knows nothing about it at all. The average young Japanese today knows less

about Buddhism than a young American knows about Christianity. To them it's just mumbo jumbo. It's an old fuddy duddy priest who their parents get together with under the superstition that if they pay the priest to recite a Sutra, something nice will happen to a dead ancestor. And the Priest will go: yoooyoooyoooyooo- Nobody knows what it means and that's it so far as the young are concerned. They see no glamour in it such as we see. Because to us, mysterious priests chanting in incense filled temples with dimly lit idols and things glimmering there, and all their robes and smell of the incense suggests magic and mystery and something way way out. Well now, a lot of people would say, well that's a lot of nonsense. That's just romanticism, that's just being beguiled by a dream about another culture that doesn't exist. But that's not altogether true. Because different cultures have always borrowed from each other. Always. There is no such thing as a sort of a simon-pure culture unless a people lived in total geographical isolation for several centuries. The Chinese borrowed from the Indians, the Japanese borrowed from the Chinese. The French borrowed from the Romans, the British and the Russians and everybody else borrowed from the French, and so it goes all the way around. Because we are always fascinated by the exotic. And the reason is that the exotics way of doing something shows us another approach to it than we had hitherto imagined. Just as in reverse. When we see Christianity as a Hindu sees it or as a Japanese like Kagawa sees it, we get rather a shock: There's a new way of looking at it. To locate the position of any object, you triangulate it. You look at it from two positions. And therefore, this triangulation in religion is a very good idea. Because the unfamiliarity of the other point of view will somehow revive things you never saw on your own.

But there's another thing to this that's tremendously important. Rather difficult to explain. One of the things that is oppressive about our own standard brand religions is their lack of humor. And also, I would say, their lack of a kind of glee. And glee and humor have to go together. Because you can get religious glee in a big hymn sing, you know, but it's often without humor. To understand a religion really well, you must be able to make jokes about it. And this is a kind of criterion which distinguishes the men from the boys. If you cannot joke about your own religion, you're very insecure in it. But what religions joke about themselves? Occasionally, a Catholic like G.K. Chesterton will be very funny indeed about Catholicism,

but this is quite rare. Hindus very rarely joke about Hinduism. The people who do joke about their religion are from China. And they are Taoists and Zen Buddhists. If you want to get the original joke book on religion, it is by a certain man by the name of Zhuangzi, or Zhuang Zhou. Who wrote probably about 350 A.D. in the tradition of Lao-Tze and the Tao Te Ching. Zhuangzi elaborated the doctrine, but his whole work is full of the most marvelous anecdotes in which one of his pedagogical devices is to make caricatures of his own point of view. For example he has a great deal to say about the value of the useless. That everybody who is aspiring to be useful will probably get eaten up. Because, after all, it's the healthy pigs that we take for food. So he has a parable about an exceedingly deformed hunchback. And he says this man was really skillful in his life because whenever the conscript officers came around they rejected him immediately but whenever the social service workers came around he was the first to get a hand out of food. And he describes a colossal tree that some travelers came across on a journey. And they said that must be the most remarkable tree and they went up to it and they found that its wood was all full of pith. And that the branches wouldn't even do for bean poles because they were all scraggly. That the leaves were rough and inedible and that the fruit was exceedingly bitter. So nobody wanted to eat this tree, as a result of which it grew with enormous size. And then he gave such illustrations as this: When a drunken man falls out of a cart, though he may suffer he does not die. Because his spirit is in a condition of security and he does not suffer from contact with objective existences. If such security may be obtained from wine how much more from the Tao, from being, you know, with it. He means this kind of relaxed, going-along with the course of nature. But you see, he exaggerates all the time. He makes these impossible illustrations. And there is always a very gentle humor in this. Now, you see, Zen comes from China and it is the result of a fusion of Buddhism without Taoism. Indian Buddhism arriving in China in this kind of style, oh, a little after 400 A.D., and then picking up a Taoist atmosphere. So. Humor, of course, is essentially laughter at oneself. Humor is really not taking yourself seriously. And therefore, naturally, as your religion is something very close to your heart, you mustn't take your religion seriously either. And so the zen masters have invariably depicted themselves in a humorous way. When you look at the drawings they did of themselves and even of Buddha they're all oafs and clowns and balloons. You know that marvelous character Hotei

who is the fat Buddha. He's not exactly- he shouldn't be called the fat Buddah. He's really a Zen tramp. With this terrific belly. And he carries around a big bag, and that bag is full of trash. It's all odds and ends which nobody else thought were important. But Hotei is like a child, he has no prejudice about things and anything might be important. And so he picks up old rags, bottles, bottle tops, discarded notebooks, all kinds of fascinating things. Don't you remember, as a child, how fascinating they were? And he puts them in this bag and it gives them away to children. And he is regarded with great respect in Zen. But he's not taken seriously. Now what do I mean? There is a difference between being serious and being sincere. And G.K. Chesterton, to go back to him, once said that in frivolity there is a lightness which can rise. But in seriousness is a gravity that falls, like a stone. And thus the angels fly because they take themselves lightly. So this is true of the of the Zen people. They take themselves lightly.

They say for example, of the teachings of Buddha: All the troubles in this world started when old golden face stuck out is three inches of iron. That means his tongue. Old golden face is Buddha. And of course, when you see Buddhist images of Buddha, they're gold, so old golden face. And if he has a tongue, it's an iron tongue. As if to say, Buddhism, the doctrine, this method- isn't serious. As a matter of fact, why do the troubles begin when the teaching begins? Why, for the simple reason, that, when you attempt to get yourself out of the difficulties caused by your own ego, you're on the wrong track. As we say: "anyone who goes to a psychiatrist ought to have his head examined."- and you see the many levels of meaning in that statement.- So they would say that the study of Zen is like putting legs on a snake. Or a beard on a eunuch. It is somehow, well we would say: "gilding the lily", is doing something unnecessary and by doing it making a mess of everything. Because, you know, lilies are not very happy when gilded. Snakes find legs inconvenient. So this is the the humor in the whole thing. That, when you catch yourself doing something such as looking all over the house for the spectacles you're wearing, there's nothing, when you find out what you done, but to laugh. And so in the same way when you are trying to get liberated, get yourself liberated from an ego which never existed in the first place. When you discover that that's the case, there's nothing for you to do but laugh at yourself. And the whole of Zen is based on this. Zen, you see, traps you, cunningly enough, into going through a great discipline.

And boy, it's not a case of somebody coming out and telling you: you come here and this discipline is good for you and you better crowd in around here and I'll take it. No, if you apply for admission to Zen school you'll get thrown out immediately. They don't want you. So you have to force your way in. You really have to lay your head on the block and say: I am in trouble. I firmly desire, I sincerely intend, I will curse and swear that I do indeed want to become a Buddha before anything else in the world. And unless you make that much fuss about it they will not let you in. And then what they do is, they fix you up with the funniest problems. There are two that I might illustrate this with. One is that you have to show the teacher who you really are. Not who you have been brought up to be. But who you are originally, before your father and mother conceived you. That is to say you must perform a completely sincere and spontaneous act. Or they will ask you to hear the sound of one hand. You know there's a Chinese proverb which says one hand doesn't make a clap. So what is the sound of one. You know those rascals, what they get away with. It but they get away with it, you see, just as long as a someone ready to be fooled. Just so long as you will allow yourself to be put down into pretending that you're just poor little me and that you're this little separate ego, that has all these problems and is disconnected and it isn't, after all, the whole universe. And as long as you feel in that way, some smart old Master can put you down and can trap you up by persuading you in some way or other that you haven't made it. And you've got to make it, you've got to attain that thing, you see? That's your egotism. So, they go through all this and it's just like someone being put in a squirrel cage. Or set to chasing his own tail. Or trying to catch his own shadow. But under the supervision of a teacher who knows just exactly what's going on. The teacher himself has been through it. And he's not like the other kind of teacher who is still a student and who is urging his students to keep on the rat race because he's still on it. Finally, it dawns. You see, when you when you persistently do something absurd, eventually you will have to see it. As Blake says: a fool who persists in his folly will become wise. But if you're really consistent about it, if you really go for that foolishness, then you will suddenly realize that you have made yourself absolutely absurd. Then there is nothing to do but laugh. And as for the teacher who traps you into this- you are very very grateful to him, but you see that after all he is a big hoax. Because here he is in his robes and in his dignity and he is just an old rice bag who tricked you into this. As Rinzai

himself put it, one of the great Chinese masters, it is like using a closed fist to deceive a child. His method of teaching is like that, you know, when you got a child and you got a closed fist, and you say: "What have I got here?" And the child's full of excitement, says: "Show me!" And you say: "Uh-uh, you gotta guess. What have I got here?". "Show me!" The child tries to pry our hand open and you hide it in every way in the child gets more and more fascinated and finally in the end: phuit. Nothing. Well it's all like that. Because, you see, taken another way: what are you holding on to? What are you protecting? What are you anxious about? What is it that you don't want to lose? And you discover eventually, that all you're defending is defensiveness. You know, you started defending something, you build up a wall, then you got worried about whether the wall would stand up so you build another wall around it. You build another one around that and really it's a sort of onion system in which there's no center. So we are defending our defenses. And when that is exposed and that's, you see, all you're doing, and there wasn't anything to defend in the first place, nor was there anything to be attained that you didn't already have. But you can't find this out by being told because you wouldn't believe it. You can only find it out by carrying your supposed predicament to its logical conclusion. So then, we take the ego. Now, how on earth are we to show that the ego is an abstraction to someone who firmly believes that that's himself. Well the only thing to do is to challenge it. So when the problem is put before a Zen novice: be sincere, show me your true self. He works like anything at it. But the circumstances under which this occurs are such as to make it practically impossible for him to do it. If you understand this, supposing you'll go and confront the teacher. And you go through some kind of formal salutation like a ritual and then at a certain minute you have to do something completely spontaneous and unpremeditated. How can you do that because here is the teacher sitting looking at you like this. Waiting for you to do it. Show me you. And he's looking right at you. And you think, Uh-oh, he sees right through me. And any kind of little guilt you have or any kind of thing like that, you feel that he's looking right at it. And just like a very skillful swordsman, if you think before you thrust he's caught you, because he's caught you thinking. You have to thrust before you think. Then you won't,- then you'll surprise it. But the moment is a little waiver of a, of intention, before the act- it's too late. He's read it, read your mind. So you mustn't have any thoughts and then he won't read your mind. It's like

when you want to go on the wagon. For goodness sake don't make a resolution. "I'm going on the wagon this year." Because then you published to the devil your intention. Never let him know. See? The same way if you're Lao-Tsi this is a story that Zhuangzi invented and has a certain typical humor to it. Lao-Tsi is supposed to have had a discussion with Confucius on the nature of love and benevolence. And when Confucius has given forth several pompositives as about this, Lao-Tsi is alleged to have said to him: What stuff! Surely your getting rid of self is a positive manifestation of self. You are like people beating drums in search of a fugitive. Or we would say, the police driving off to raid a night club with their sirens on. That announces that they're coming. So in order to surprise yourself you mustn't know what you're going to do. Now how can you do that is the paradox which the Hindus express by saying "if you think of a monkey while you're taking medicine the medicine won't work, therefore try not to think of a monkey while taking medicine".

So. How are you going to surprise yourself? See, we got back to that thing we were talking about this morning, that button with the word surprise on it. And if you're God, you know what the surprise is, how can you not? The problem for God, as well as for us: How do you surprise yourself? Because that's what you've got to do. If you're going to be spontaneous, you see, your action has to be a surprise to you, like having hiccups. But how are you going to arrange for yourself to do something surprising? So you really work at that. And you work and you work and you work and the teacher rejects all your efforts. Even some of your fairly good efforts get rejected. Because he's building up with you a fabulous frustration. He's making you feel that this task is like looking for a needle in a haystack. To discourage you in every possible way. And yet, at the same time, lead you on by saying, "Well you've got to work at it. In the past there were all those famous students who went before and they sweated blood to find this out. They were ready to give their lives to hear the sound of one hand. You can't expect to get anywhere near them unless you redouble your efforts." You see this is the come on. The sales pitch. Though finally you get to a point where you understand and see perfectly clearly that there's nothing you can do about it. Nothing at all. But there, where are you? Because as if there's nothing you can do about it, then nothing's going to happen. You mean you're going to sit around and wait for the grace of God? Maybe it will get

you one day and you say, well I'll just go along and do my daily work. It's nothing I can do. And if you indicate to the teacher that that is your attitude, he's got another curve to throw at you. Which is that this giving up is still a contrivance. You're still doing something. So there's nothing in it- so far as the transformation of the ego is concerned, there is nothing you can do about it. Also there's nothing you cannot do about it. You find you cannot abandon this quest once it's excited you and just go off and be an ordinary Philistine type person. Because if you do that, that too will be phony. So you're left in this frantic dilemma: there's nothing I can do and there's nothing I cannot do. But you see, you eventually get to the meaning of that situation: What does it mean that I'm in this situation? It means that the I, which I thought I was, since it can neither do anything nor not do anything, then it doesn't exist. You realize it for the abstraction that it is. That's the practical experiment. It's very frustrating. And why is it frustrating? You made it frustrating by swallowing the teacher's advice, which he knew you would fall for. And you were trying to do what the preachers tell you. To make yourself unselfish by either an active course or a passive course, and neither of them work because they're both redundant. There is no real self, no real ego. And then of course, when that's found out, everybody has a good laugh. So that is a kind of a spirit in spirituality and religion which is really rather rare. So. I think this is the feature of Zen which is attractive to most Westerners. On the one hand, it's extreme directness. And on the other, it's human. So it's very difficult, although a few people have achieved it, to be Zen and to be stuffy. Because it is essentially an un-stuffing process. A way of getting rid of. I think we have in our contemporary American slang some very wonderful words, such as hang up. Almost exact translation of what Buddhist mean by a Klesha, or worldly attachment. See when you talk about worldly attachments to Christians, they think it means enjoying your food and liking sex and having a beautiful car or something like that. That's what they call worldly attachments. Now in Buddhism all those things could be worldly attachments, or Klesha, but aren't necessarily so. It depends if you're hung up on it. And to be hung up means to be in a dither. In a state where you hesitate, not knowing should I go this way or that way. See that's a hang up. And so, the the tactics of a Zen teacher are to put all his students constantly into hang-up situations. To challenge them by such a procedure as this: you're in a conversation, you've just been introduced to the teacher and he says, "how you do? Where have you come

from?” “Oh, I came from Tokyo.”, “And where did you go to school?”, “Well I was at the University of Tokyo for a while.”, “Why is my hand so much like the Buddha’s hand?” Dead silence. See, he suddenly slips into this question, which nonpluses the student. Now the art of nonplusing is part of the whole technique of the teacher. And your problem is to get out of being non-plussed. And to be able to do that, you have to be able to act without ego. That is to say, without choice, without deliberation. How to act without deliberation is to all right-thinking people a very foolish thing to do. We say “look before you leap”, but we also say “he who hesitates is lost”. Now you see, what we’re getting down to here, really seriously, is that the Zen method is a way of teaching people to get with themselves in the larger sense of self and the ego. That is, shall I say, to have faith in yourself in that larger sense. If your brain and your nervous system is a most fabulous computer, which you had no hand whatever in constructing from the standpoint of conscious ego, but it is you- you should certainly learn to trust it. But we were all brought up not to trust yourself. And therefore, for us, brought up in that way, it’s a very dangerous thing to trust yourself to rashly. And therefore, to learn how to do it, we have to learn in protected circumstances. So the Zen school provides protected circumstances in which we can behave in unexpected ways, or we can try out a spontaneous behavior. Everybody around there understands that some very odd things may happen, but just because this is understood, there’s no problem about them. So. All those Zen stories that we read and laugh over, because they seem so idiotic, are stories in which the teacher hangs up the student and the student does or doesn’t get out of the hang up. If you can come on with that sort of instant but not hurried response to the challenge, that means his psychic energy is flowing unobstructedly. The whirlpool is just working beautifully and the energy is just flowing right through it. But on the other hand, if he’s hung up it means he’s in a state of insecurity. He’s afraid that if he doesn’t choose the right response to the situation, he may be in serious danger. Danger, maybe, of disapproval by the teacher or of actually risking his life in some way, or, you know as they say, “saying the wrong thing”. But the secret is, of course, to respond instantly in some way. If he says, why is my hand so much like the Buddha’s hand, you might slap it. Or you might just shake hands with it. Or you might put a penny in this palm. Or you might spit on it. Or you might kiss it. But immediately. That’s the answer. Now sometimes he will feel that

you're not really skillful at this, that your spontaneous answer is inappropriate. Or that it's a contrived spontaneous answer. You get to the point where you can detect the spirit in which it's done very easily, all sorts of cues give it to you. And therefore he rejects it. Try again. Because you cannot give that sort of answer until you come to the point that you get to when you learn to ride a bicycle. You remember when you try to learn to ride a bicycle you get to the point where you know that you're going to be the one damn stupid child who will never learn to ride a bicycle. And at that minute, suddenly, you find: It's doing it. It was the same with learning to swim. All those knacks are just like the study of Zen. So you will, in the study of Zen, get to the point where you know you're going to get one eternally stupid student who never never will get through that Koan. That's a Zen problem, in Japanese, Koan. Like, "What is the sound of one hand?", that's a Koan. And out of that intense frustration there occurs the transforming experience, because it is that intense frustration that reveals to you in an undeniable, immediate, sensuous way, the frustration of discovering that what you thought you were all along isn't really there at all. Do you remember that I described that state in which you discover that your actions are the actions of the environment, and what the environment is doing is what you are doing, and that both of these are true because it's all one process? And when you're so used to thinking about it the other way, and you get into a feeling of it being that way- it's frustrating. It's like the experience of talking into a microphone and then hearing your own voice a split second later. And you start doing this and this thing starts talking and then suddenly you find yourself waiting for it to go on. Very frustrating. But of course, it's you who's got to go on talking. It won't do, it won't work without you doing it. Although it sounds like it's coming from somewhere else. Well it's just like that, this feeling I'm describing. So you think. This is why a lot of people get into trouble with psychedelic chemicals. They get into this state. And when they suddenly find that it's all one process they begin to worry- now who's responsible? Am I responsible for my acts? But I'm not doing them. Is It responsible, so that I can say "well it wasn't my fault."? And then you suddenly see that you can't divide it from you. But since you don't feel in the ordinary old way, you feel that "How do I know that I'll still speak the English language or will remember how to do it ten seconds from now?" Because if it all depends on something that's not on the my control, I don't know that it will remember English. Or

might I commit a murder? Supposing I suddenly commit a murder. How can I trust myself not to commit a murder? Because there's no one in charge. But you find that it's really perfectly easy to go ahead and remember what English is and to act in an absolutely civilized way. But when people don't see that, they get panicky. And panic in this state just builds up and builds up and builds up and builds up into the most appalling vicious circles. But, on the other hand, if you get into this new situation and just go ahead, you find it works beautifully. And that is why the Zen poet speaks of drawing water and carrying fuel as a miraculous activity. "I walk on foot and yet I'm riding on the back of an Ox. Empty handed and yet a spade is in my hand. When I cross the bridge, the bridge flows and the waters still." That's the feeling. See: "Empty handed I go, and yet a spade is in my hand." How would you know your hand was empty unless you've seen it with a spade in it? If you've always seen a spade in a hand, you would think the spade was an extension of the hand like a finger. So in order to know what empty-handedness means, you must know what full-handedness means. Therefore the spade in the hand makes possible the realisation of an empty hand, and vice versa. So in the same way the Realization of something other makes possible the realisation of what you call you. So you can't know what you mean by you unless that is the experience of the other. Then you suddenly see, therefore, self and other and all that that implies, what you will and what you don't will, what you want and what you don't want- these are all going together. Like this. So it's like when you're driving a car. When you move the steering wheel are you pushing it or pulling it? Let not your left hand know what your right hand doeth. You are, of course, pull-pushing it. So the same thing happens in this state of consciousness. What you ordinarily felt was pushing the world around, was it pulling you. What you ordinary felt as though the world pushing you around, is you pulling it. Only you always suppress one side of the awareness. So. Zen practice leads to bringing about that awareness of polarity between the organism in the environment. But getting around the problem, the false problem of "how do I get rid of myself?" "How do I transform myself?", when the I which I believe myself to be has no part of transform anything because it's a social convention and an abstraction. Let me start by a little bit of backtracking and revision, which I shall do with the help of A.N. Whitehead. I've been talking about the situation of man, of the individual, in the world of nature, and the complexity

introduced into this by technology, and further troubled by the way in which individuals generally experience themselves as confronting an alien universe. A form of experiencing our existence which is in flat contradiction to the scientific description of man as an organism-environment rather than an organism IN an environment. Whitehead puts it in this way: "The doctrine which I am maintaining is that the whole concept of materialism only applies to very abstract entities. The products of logical discernment. The concrete, enduring entities are organisms. So that the plan of the whole influences the very characters of the various subordinate organisms which enter into it. In the case of an animal, the mental states enter into the plan of the total organism and thus modify the plans of the successive subordinate organisms until the ultimate smallest organisms, such as electrons, are reached. Thus an electron within a living body is different from an electron outside it by reason of the plan of the body. The electron blindly runs either within or without the body. But it runs within the body in accordance with its character within the body. That is to say in accordance with the general plan of the body, and this plan includes the mental state. But the principle of modification is perfectly general throughout nature and represents no property peculiar to living bodies. In subsequent lectures it will be explained that this doctrine involves the abandonment of the traditional scientific materialism. And the substitution of an alternative doctrine of organism." In this passage, he is stating in another way what he calls "the fallacy of misplaced concreteness". That is to say, of attributing physical reality to the abstractions in terms of which we describe the natural world. Such as things which are, as I showed you, units of thought. THINKS, as inches, for example, are units of measurement. And through the confusion of the, as Korzybski would have said, "the map with the territory". Or, as it Wittgenstein would have said, the network with the world which we try to catch with the network. You see, in a certain sense, we throw networks over everything. Just as we throw the lines of latitude and longitude over the surface of the globe in imagination, just as we have celestial latitude and longitude, an imaginary net which we cast over the stars and discuss all the features of the physical world in terms of their positions within the network, which are easily measurable as was as if we had, for example, graph paper printed on cellophane. So, in doing this we tend increasingly to confuse the structure of the net with the structure of the world that the net is used to measure. And it is as a result of that, that

we are, as it were, hypnotized by the abstract sense of individuality, or rather the abstract definition of individuality. And are less and less aware of what it is to be an individual concretely. And so, in this sense, he says: My own criticism of our traditional educational methods is that they are far too much occupied with intellectual analysis and with the acquirement of formularised information. What I mean is that we neglect to strengthen the habits of concrete appreciation of the individual facts and their full interplay of emergent values and that we merely emphasise abstract formulations which ignore this aspect of the interplay of diverse values. We are too exclusively bookish in our scholastic routine. The general training should aim at eliciting our concrete apprehensions and should satisfy the itch of youth to be doing something. There should be some analysis even here but only just enough to illustrate the ways of thinking in diverse spheres. In the Garden of Eden, Adam saw all the animals before he named them. In the traditional educational system, children named the animals before they saw them. But when you understand all about the sun and all about the atmosphere and all about the rotation of the Earth, you may still miss the radiance of the sunset. There is no substitute for the direct perception of the concrete achievement of a thing in its actuality. We want concrete fact with a highlight thrown on what is relevant to its preciousness. I don't always approve of Whitehead's style of English, I think it's a little pompous. But it's very well said here. He is saying in a kind of pedantic and academic way what the Zen Buddhists demonstrate. For one of their principles is that when you ask a question about the abstract, that is to say, about philosophy or religion, you get an answer in the concrete. And when you ask a question about the concrete, you get an answer in terms of the abstract. So then, when those old Chinese masters were asked what is the fundamental principle of Buddhism, they would say something like "three pounds of flax". And when working in the fields they were pruning tea bushes and the monk said to the Master, "Will you give me the knife?", the master hands him the knife blade first. He says "Please give me the other end." Question is, what would you do with the other end? And the conversation, as it were, switches in that way. But when he says, in answer to "What is the part fundamental principle of Buddhism?", "Three pounds of flax.", one is not to suppose, as one might if habituated to ordinary philosophical or religious ways of thinking, one must not suppose that this is some kind of symbolism. As if three referred to the Buddha, the Dharma, and the Sangha,

the three treasures of buddhism, or to the three bodies of Buddha, or anything like that. Three pounds of flax is just three pounds of flax. And even that is saying too much. It's very difficult to point, you see, to Reality itself. When you try to get a dog to go and look at something by pointing at it the dog will come to your finger. And will not understand the meaning of pointing. So it is with humans. And if we consider, that various kinds of religion, the teachings of religion, the rights, or the sacraments of religion are fingers pointing, human beings all too readily suck those fingers for comfort, instead of following or looking in the direction of the pointing. So, such stranger answers as three pounds of flax, or whatever it may be, try to jolt us out of our excessive thinking. As Whitehead says, our education is too bookish to come into direct contact with physical, material reality. But of course when I say these words, physical and material, they're abstract. And this isn't abstract. Nor, in that sense, is it material. In so far as material is an abstract idea, it's a concept. This is not a concept.

So, to wake people up, to look at that, requires, among other things, interior silence. Now, I've said some of this to you before, or said it to some of you before, but it cannot be stressed too often: The Chinese sage who was a Taoist, Zhouangzi, said once: "The perfect man employs his mind as a mirror. It grasps nothing. It refuses nothing. It receives but does not keep." And this attitude in Zen Buddhism is called mushin, which in Japanese means "no mind". We would say mindlessness or thoughtlessness. Except that those words in our cultural context have a pejorative sense. To say that someone is thoughtless is to say that he's inconsiderate or moronic. But in the Chinese sense of the term thoughtless, it means having a mirror-like mind. There's a verse which says: "The wild geese do not intend to cast their image. The water has no mind to retain their reflection." The same is sometimes said of the relationship of the moon to the water. Now this "no mind" means, really, mental silence. In the sense that the mind is highly alert and highly aware. But without talking to itself. When it hears whistling, it doesn't think bird. It doesn't think song, it doesn't think music it just thinks— whistling. And so that means the absence of chattering to yourself constantly inside your head. Whether you're doing it in words, whether you're doing it in numbers, or whether you're doing it in abstract images of some other kind. To become still, and to reflect the world as a clear pool reflects the sky. Well why is that important? Well I can give at

least two reasons. One is, that if I am to talk all the time, I will not have anything to talk about except my own verbiage. Because I won't listen to what anybody else has to say. In exactly the same way, if I think all the time, I won't have anything to think about except thoughts. So just as I have to stop talking occasionally to hear what others have to say, so I have to stop thinking occasionally to have something to think about. Otherwise I'm sort of like a bookworm, a person who never gets out of the library, who reads and reads and reads, but has no contact with the life that the books are about. Now, it's very difficult, you see, to have a silent mind, because we are creatures of habit. And we think incessantly. Now the second reason is, that we are very bothered by our thoughts. One reason why Americans in particular don't like to be alone, and like, even if they are alone, they turn on the radio or the television or read a magazine, is that they're disturbed by their thoughts. I'm left alone with my thoughts and I start worrying. Why? Because you live according to a world of conceptions. For example, let's say what we worry about. We worry about the future or we regret things we've done in the past. But the future is not here. And the past has disappeared. The future and the past, as it were, do not belong to the physical world. They are abstractions.

And what we remember of the past is a very attenuated image of it and what we predict for the future is never quite like what happens. In fact it's very unlike it. If I say to someone: "What did you do yesterday?", they say "Oh well I got up in the morning, I had some coffee, I went for a stroll, then I had breakfast and I dressed, then brush my teeth and I went up to the office and I saw Mr So-and-So" and so on, you know. But this is, you see, you're thinking of you of your past day in terms of abstractions which have are like the bones of events and have none of the flesh on them. When you draw an abstract picture of a human body in stick figures, you know, you draw a round blob for the head then arms and legs, but everybody knows at once: that's a human being. Or meant to be, or represents a human being but it's not really very like one. It has none of the color, none of the flesh, none of the beautiful texture of a human organism. So in thinking of our past as these rather attenuated, dried out memories, we always seem to have had a life of deprived richness. And therefore, the more we identify the succession of our days with these abstractions, the more we feel that it was something we're missing. As if you were to make a diet of dollar bills. You

would suffer from malnutrition. And if you were stubbornly convinced that what you needed was more, you would have not only have malnutrition, but serious indigestion. And so, in the same way, if you think that what you need is more time, then you panic about the future. You want more future. And you say of something which is no good, "it has no future". But what you should say is, "it has no present". Because when, you see, you have a silent mind, you are not thinking about the future. You are not thinking about the past. You are experiencing the present in a very complete way. You are not stopping to analyze each detail. You couldn't possibly ever do that. But you are getting all the details without focusing on certain details which exclude your apprehension of the whole. And so you are beginning to live a rich life and a real life that is completely here and now. Now, neither Whitehead certainly, nor I,- I'm taking in this an anti intellectual position- we are saying that if you do not know completely how to live in the present, you have no use for plans for the future. Because you will never be able to enjoy those plans when they mature, because you won't be there. You'll be thinking about some other future. So what's the point? And in the same way there is no purpose in the intellectual life unless you are fully aware of that, which the intellectual life is about. That is to say present, vivid, real life. The intellectual life is a commentary on that, is a way of measuring it, and as all measurements are useful for prediction and for control. That's fine. But don't get so involved in prediction and control that all you're doing is controlling, controlling. You know, like, "Is the meaning of life just to find out what the meaning of life is?" But that's what happens.

And one of the things that is explored in the meditations of the disciplines of Zen people and other types of Eastern philosophy, is the exploration of power. We've been into this a little. Would you really like to control everything, supposing you could. And every wise person of course comes to the conclusion, that that's not what they want. Because if you controlled everything, there would be no surprises. But we are at present, you see, dangerously living into an era of our civilization, in which we are over-controlled. In which, for example, the laws cannot operate because there is too much law. In which you cannot do the simplest thing in the way of an enterprise or of business or of anything, without having a battery of lawyers to tell you whether you may do it and how you may do it and the paperwork that goes with everything you do is absolutely intolerable. Academic

paperwork is overwhelming. And you will notice that the records in a registrar's office are kept in safes, they are so precious. But the books in the library are easily stolen. That the recording of what is done is more important than what is done. It's like some people who don't believe anything happens unless they've got a picture of it. And who obsessively take pictures of everything. We're having a lovely time and somebody comes in beautifully dressed and so on and we say, "oh what a pity no one brought a camera!" And I know the Japanese are obsessed with this because they, you see, they're reacting, they're copying all the terrible features of Western culture. When they go to a great monument, they photograph incessantly. They don't see a thing, except through the the viewfinder of the camera. And this little box is going, grab, grab, grab, grab. Instead of enjoying the gorgeous presence of this temple, this garden, this mountain landscape they're waiting till they get home and go through these measly little reproductions of. I sometimes wonder about this thing. I have myself never never listened to it, but I know other people like to have recordings of these things so that they they miss some point they can catch up with it again. I don't know, I sometimes have nightmares about a world of echoes. In which there are only echoes and echoes of echoes and echoes of echoes of echos. Reverberating forever down the empty corridors of my mind. Now, here comes a problem though. How do you make your mind still? The method in Zen is a method of exasperation. They of course advocate various technical aids to making your mind still, such as the practice of Zazen, which is sitting, usually cross-legged, on cushions in a long hall and counting your breath. So as to eliminate from consciousness any other thoughts than that of the counting of the breath. And this eventually results in a state of stillness. Only that's not enough. Because the skillful teacher feels that this kind of stillness is not yet true stillness. It's forced. And he's trying to get you to a point where it will never be necessary for you to force your mind to be still, but where it can be so quite naturally. And he can only do that by tricks which are called Upaya in Sanskrit, Hoben in Japanese, which means skillful means. In pedagogy, Upaya means the tricks of the teachers trade. How he gets attention, how helps you to understand something. In politics, Upaya means cunning, deceit. Has a sort of a bad meaning in politics. And so the Zen teacher uses all sorts of tricks to get you away from the fallacy of trying to make your mind still by force, which is like trying to smooth rough water with a flat on. All you do is stir it up.

I'm thinking that I'm trying not to think. I'm annoyed with myself because I'm not successful, etc etc. I should be successful. All these are disturbances. All these considerations, they're off the point. But how to get people off them You have to reach a point, in other words, where you learn to leave your mind alone as you leave rough water alone, so that it becomes smooth of itself. But while you conceive your waiting for this to happen, you're still staring it up. You therefore have to get rid of the sensation that there is you, the thinker, watching the thoughts. You, the feeler, separate from and trying to control the feelings. Because so long as that separation exists, you will have trouble. And therefore the function of the koans, the problems, like, what is the sound of one hand?, is to lead you to the natural seeing-through of, the debunking of the concept of the separate thinker and the separate experiencer. So that, when you find out that the thinker on the thoughts are not different, then you will have less and less trouble in allowing the thoughts to become quiet. It's difficult for us to understand this simply because of our language. When we say knowing or thinking, we always feel that this is a function or activity of someone who thinks and knows. That's because we are tied up with this subject-verb-predicate language structure.

Now, the same problem is approached from a somewhat different point of view and with a different style, but essentially the same principles, are being used in the philosophy of Krishnamurti. Only it comes from, it comes in a very different way. Because, although Krishnamurti is an Indian, and thus we would say in the United States, a Hindu, he doesn't present himself as affiliated with any kind of religious or philosophical organization. He comes on simply as Mr Krishnamurti. And he doesn't present any gimmicks, any obvious techniques. Because, according to his view, all these special practices are hindrances. In other words, supposing a group of people take up Zen Buddhism. Before you know where you are, they have become a club, a special in group, and they're the Zen people and they're gonna sell this thing. They're going to say: "You should try our Zen.", you know, you may be a Christian scientist, you may be a Catholic, you may be a Seventh Day Adventist, you may be a Theosophist, and all these ways have something to be said for them, BUT the real thing is our Zazen! And then of course they all start sitting in meditation posture and they put up hanging scrolls and burn incense and have Buddhas and gongs and so on,

and all that can be used. Just as a sort of social or cultural one-up-manship. And this is a very serious obstacle. Now then, Krishnamurti comes on without any bells or robes. He addresses his audience wearing gray flannel pants and a wide open shirt. That's it. And he talks without any spiritual technicalities or even philosophical technicalities. Absolutely dispenses with them. All he really does is ask questions. And therefore he seems to many people as a total debunker who has nothing positive to offer. His approach is invariably one of this: You propose the question. In other words, you asked him to come here. Why? What is it you're looking for? And you ask a question. For example, because, actually, many of his original followers came out of a Theosophical background, they perpetually asked the question like "Is there such a thing as reincarnation?", "Will I, did I have a past life?", "Will I have a future life?" And instead of either saying yes or no, he comes back with "Why do you ask?" "Is there a god?", "Why do you ask?" Go into it, go into the state of mind you have when you voice that question. Why are you voicing it? Well people will defend themselves for a long time when faced with that. They'll say, "Well I'm curious." Or isn't it one's purpose in life to find out these things? He said "What makes you think it's your purpose in life? Does someone tell you so and you believe that? Why do you think that's your purpose in life?" And you have to back off a little bit. Say "Well, I suppose the real reason why I want to know whether there's going to be a future life. is that I'm afraid of death." "Why are you afraid of death?" "Well I don't want to lose my continuity." AH-HA! So that's the reason, is it? You are clinging to yourself. Yea. Well he would say, "How can you possibly understand God or anything of a spiritual nature while you're clinging to yourself? Aren't these two activities mutually exclusive? If you want to know what truth is, you must be open to truth, whatever it is. But if you are, If you say, only that truth will be acceptable to me, which supports my conception of my ego then you are not open." And you say "Yes, I see." But then you say "How can I be open?" He says "Why do you want to be?" See, you're just doing the same old thing again. You ask me how to be unselfish. But what is your reason for only for wanting to be unselfish? You don't want to be unselfish at all. You want to find a new way of getting around it all. Now. In this manner he absolutely exasperates people. Because he'll never agree with anything anybody says. If they formulate it and say "Mr Krishnamurti, is that what you mean?" He says "No no no no! No, no. No, no. No. Now, look, go into

it again. Don't, don't, don't make a formulation," he says, "don't come to a conclusion. Don't want to have a resolution of this. Just be, if you can, open to to what is. To what you actually feel. Now. Don't judge it, don't say it should be, shouldn't be." What is. Say, when you're in a state of grief. What is grief? Now, don't say a word. Don't try to pin it down. Don't give a definition. Just experience whatever you have labeled as grief. I often ask people when they say they're anxious. "Where are you anxious?" And they say "All over." I say, "Come now. How do you know you are anxious? What symptoms are there going on when you that tell you you're anxious?" Then they begin to notice things in this stomach and headachy things, or whatever it may be. And then they come to a more concrete apprehension of the state of affairs that they have labelled anxiety. And in this way, which is really it isn't really very like Zen because it's frustrating, people come to see: there's absolutely nothing they can do at all to stop being selfish.

So they see after a while, that trying to stop being selfish is the same thing as selfishness. Trying to get rid of grief is grief. And so, when you see that, there comes a point at which we could best call giving up. Surrender.

William James pointed this out likewise in a study of the varieties of Religious Experience in the psychology of conversion. There's the point of absolute frustration, followed by surrender. And then, in that moment of surrender when you see you just can't do anything about it, you suddenly have quiet mind. There is no further effort, you see, to say the thinker and the thoughts are one. That's a formulation. The experienter and the experience are one experiencing. You don't need to say that. Because that's not the point. The formulation of it is not the point. It is the actual experiencing itself that is the point. But you can't come to that while you are going over in your mind all this chatter about: I should accept my experience I should not accept my experience etc. As a matter of fact when psychologists sometimes say, you should accept yourself: A lot of people just don't, you know, they're always fighting with themselves, clubbing themselves and their allegedly disciplining themselves. And then they get into a tremendous clutch-ups inside and a psychologist says "Now come, you're human, you should accept yourself,. You shouldn't feel guilty if you get angry, it's very natural to get angry. Accept yourself." So people try to accept themselves. Then they come across the fact that there are certain things they do not and cannot accept. And they have to accept the fact that

they can't accept them. Accept that you don't accept. And then that's the same bind that Buddha put people in when he said "In order not to suffer you must get rid of desire." But then people find out that they desire to get rid of desire. So you see, that saying "Accept yourself" is a gimmick. It's an Upaya. And the object of it is to bring you to the state where you see that the self which does the accepting is the one you need to accept. And in this state where you're confronted with the necessity of looking your own tongue, you suddenly see that what you thought was to be accepted and what was to do the accepting are all one. It's a very awkward feeling at this moment. R.H. Blythe described it beautifully: You're about to swat a fly. But the fly jumped up and sat on the swatter. You were about to punch the world in the nose. And the nose became the same as the fist. And of course in that moment one feels awkward, just as I described in the first talk that the situation of feeling that you in the environment are all one process- at first that is non-classic. You're just not used to feeling that way. Because if the stream of thought, or the stream of experience is the same as the experiencer- who is in control? Well, it controls itself it's what the Chinese call zi-ran- of itself so. Which is their word for nature. And in their organic theory of nature there is no one in control who stands outside and above the organic system itself. The organic consistent it controls itself. It's full of the same sort of balances that any organic system has. Because if it didn't have that it wouldn't be organic it would be merely chaotic. So we get back, you see, to what is fundamental in Chinese far eastern psychology. That any ongoing system must trust itself. And therefore the attitude of these people to human nature is rather different from ours. They would say human nature is basically to be trusted. Not that there's anyone outside it to trust or mistrust it. But they would say if you don't trust your own nature, how can you trust your mistrust? How can you know that even that's reliable? Because that's all part of you.

Now they will say, yes, in the in human nature there are passions. There is greed there is anger, there is an aggressive tendency. But what is good about human nature is it's good and bad. Confucius once said the goody-goodies are the thieves of virtue. And he exalted above mere goodness, in the sense of following a legal righteousness, something called in Chinese ren, which means human heartedness. Being a complete human. Now a complete human is always a little bit of a rascal. Not too much of a rascal. The point

is that you have a little rascality in you like you put salt in the stew. Now you certainly don't want the steel to be all salt. But when it's without salt it's sort of flat. And don't you feel that with very good people, they're awfully dull? You know where there's a certain kind of oppressive goodness about people of a certain kind. I won't make any labels. But when you come into that there's something about it that you know you're sitting on the edge of your chair. Jung once said that he met a man in whom he could find no human failings whatsoever. And he was terribly disturbed because he thought, really, if that's possible I should put my own life in order. But he said "Never again will I be deceived. A few days later I met his wife." Now it wasn't that his wife said "Ha! You think my husband is good. You should see him when no one else is around except me." Oh no, it wasn't that at all. It was the wife was living her husband's shadow. she was living out in her life all the things that he repressed in his. And that can easily happen in a very close human association. She, in other words, was the incarnation of his shadow. We all cast a shadow. And it's better to carry our own than to stick it on someone else. So. In talking to a great Zen master. He once said: "I really have no other ideal than to be a complete human being." And so that means not only flowers on the top, but manure around the roots. The totality. True humility is, after all, the recognition of this situation. And it's only when we get to be proud of our humility, you see, that we are in difficulty. So. I sometimes wonder a little bit with Krishnamurti. Whether he may not be sometimes too earnest. But I realize that that is his public facade. Because of the tremendous earnestness with which he is trying to get his listeners to be fully here and now. And when they escape from the moment either by comments, attempting to get definitions, or even by laughing, he keeps pulling them back to the absolutely immediate experience. Therefore he's really at his best in rather intimate sessions with people. Where he likes to sit around in a ring with people and instead of giving a lecture conduct this dialogue. Back and forth the questions come and then he throws the question back to the questioner. "Why did you ask? Look at it. Are you really listening?" He said most people don't listen. They wait for the speaker to express their own opinion. And when he doesn't, they don't listen. They try to make sense out of the words and I was saying to you earlier on: sometimes it's very important to listen to the sound of the speaker's voice rather than trying to follow the meaning of the words. Indians, American Indians very often do that. They want to know what a

man really is like and what his true character is. They listen to the sound of his voice, no matter what he has to say. You can be off to distracted by what a person has to say, and not see what kind of a villain is coming up against you. So in both these cases in the case of Zen and in the case of the work of Krishnamurti, we have two examples of, we could say, methods in a certain sense or methods of non method, by which we can do something to correct and overcome the divorce of the mind, the human mind from the physical world. But let me repeat: by saying the physical world I'm using a word for want of anything better. Korzybski called it the unspeakable world. It is really rather funny. That is to say the non-verbal world. Which is of course in a profound sense the spiritual world, because it's immaterial. That is to say immaterial in the sense of unmeasured. So these studies, practices, disciplines or whatever you want to call them, that are of very great and special value to a culture as powerful as ours, which is seriously suffering from alienation, splitness, divorce of consciousness from reality.

Well now. The general trend of this seminar has been from the theoretical to the practical. That is to say, I started in the first session talking to you in a very theoretical way about the relation of the individual to the world. And showing how our apprehension of our own existence is, when compared with the scientific description of our relation to nature, really a hallucination. And then the problem is the practical overcoming of this hallucination. And so I've discussed with you two approaches, which are very like each other, to that objective. One, the essential principles of the method of Zen. And the other the essential principles of the method, or the non-method of Krishnamurti. Because coming to the blaze the Institute are these people, Zen people and Krishnamurti. We hope. So but, you know, don't bruted around too much but that's what you're in for. But of course the work there has a particular relevance for students, for young people. And both these approaches, Krishnamurti's approach and the Zen approach, are very proper and appropriate for young people today. One of the most balancing factors in San Francisco life at this time is the existence of a very strong movement for the practice of Zen alongside the whole wide open world of hippiedom. And many, many young people who are what you might call in the general hippie direction and classification, are, as a matter of fact being beguiled by Suzuki Roshi with the Zen Center in San Francisco to go out to Tasajara springs at the end of the Carmel Valley and practice zen meditation. Now, this is a very extraordinary thing. Because the

sessions in Zen meditation out at the end of the valley are tough. And Mr Suzuki stands no nonsense. This is a very, very, I don't quite want to say serious, that's the wrong word because Zen isn't serious. Let's say a very sincere application which requires a great deal of work because you don't only meditate. You have to be responsible for the maintenance of the grounds of the buildings and everything.

So it's a wonderful training school for young people. But they will go for this, in a way that they wouldn't go for discipline under other and more traditional offices. This is something new, this has a new flavor. But this man Suzuki is doing wonders for young people in San Francisco. The difficulty, you see, is with people who get their introduction to mysticism through L.S.D. or marijuana and other chemicals. Is that they get suddenly flipped into a very high states of consciousness with no background, no way to comprehend it, no way to deal with it, no way to bring it down to earth. And therefore, since there are operating in the same area where these things are happening experienced people who have long, long training in knowing how to connect the mystical with the practical, this is a very good influence. And in the same way I would think Krishnamurti has a comparable influence, although he doesn't act as the leader of an ongoing community. As Suzuki does. This is more or less touch and go thing. A few meetings, a few encounters and that's the end of it. It's up to you after that. But both these directions are presenting the problem of self realisation. Are certainly not frivolous. And certainly require a great deal of self-examination. And this is a great problem which faces us now among young people who are in revolt against all sorts of things that in the lives of the fathers and mothers they feel to be false. They are in revolt against what Buddhists call Samsara. Samsara means the wheel of birth and death. But Samsara really is the same thing as squirrel cage, a rat race. Where you are working and working and working. For you really know not what. That process of gaining money or status or whatever it is not really to be enjoyed because one feels a little bit too guilty to enjoy it. But to bring up children, to give them expensive and glorious college education. So that they can bring up their children to do the same things and it just goes on and on and on and on like this and so against this rat race, against the absorption, say, of the of the executive in paperwork and in abstractions. Against the complete dissolution of the family by reason of husband's absorption in business,

wife's absorption in women's club, children's absorptions in a school where they're not cared for by their parents. The revolt against all that sort of thing is going on. But it's just not enough to revolt. It's just not enough to take various drugs which open your mind to new dimensions. It's not enough to challenge everybody's standards in clothing, in housing, in family arrangements and so on. Behind and beyond all that there must be some way out bringing it all to earth, grounding it. As I've intimated already, the fascination of young people today for the mystical and for chemical mysticism is very dangerous. Like every worthwhile enterprise, is dangerous. If they weren't doing that they'd be driving hotrods and perhaps skydiving. Anyway something dangerous. The young always have to be involved in something dangerous. But this adventure of exploration of the inner world is of peculiar danger simply because it goes into that aspect of our being about which we know least, our own inner life, our minds. But it is of the utmost importance that those adventures be accompanied with some kind of discipline. Now, discipline is a dirty word today among young people. When you say discipline it means, you know, don't do it. And so I substitute for the word discipline the word skill. Because there is no pleasure in this world without skill. And skill is an attractive word. Discipline is a push-away word. And, all of you, as I look around to estimate the ages of people in this room, you are all involved with young people. And you must be very conscious, as you all are very conscious, of the strife, the discord, the gap between generations. And so I myself regard my function to be a bridge person. I've worked all my life to be a bridge between east and west. And now is thrown in my lap the job of being a bridge between the young and the old. And so now I'm talking to a relatively older group and I want to say some very serious things to you about how to handle what is happening among young people. Especially since this is under the auspices of the Blaisdell Institute which is concerned with the university and therefore with the education of young people. In relation to everything I've been talking about. Because the young are interested, deeply and seriously interested, in the transformation of consciousness. In breaking out from the narrow situation of the alienated individual against the world. But in doing this, they are showing the usual excesses and imbalances of things that young people always do. They're not experienced, they're not mature. Therefore, just for the very reason that they're not mature, they have the guts, or the foolhardiness if you want to

call it that, to go out on these expeditions. But it was always so. In the six thousand B.C. an Egyptian priest was complaining of the decade and the responsibility and discipline of young. So what to do under these circumstances? You must not give up your own ground in the sense that there is, as I said, a very definite need for a discipline. For something that will act in the same way in as in radio the ground wire acts to the antenna. It's not enough to have a way-out experience and come back and say to your friends: "Man it was a gas." Because it is immemorial wisdom that everybody who takes a journey must bring something back. Because if he doesn't, nobody knows he's taken it. He may have lived. He may just have said that he went to the land of the demons and fought with the dragons and then crossed the perilous bridge and came into the fairy palace to. Bring back a fairy's feather. Proof it. This is not merely to prove it, it is also to do another thing which is the whole work of art. What is art? Art is what Christians call the process of incarnation. The making of the Divine Word into the flesh. The expression, in a material form, of vision. And to do that is very difficult. On one hundred micrograms of L.S.D. you may very well have seen the vision of God in a dirty old ashtray. Can you imagine that that's possible? But it is, because what is an ashtray? An ashtray is the decay of falling apart, the burning away. The turning of alive, more or less alive, or at least moist leaves of tobacco, into dust. And as you begin to think about that from a certain point of view it becomes a parable of the process of existence. What is this turning of everything into dust? At first sight it looks as if it were a kind of a doom. Everything is just going into dust, dust, dust, dust and blowing away. And you realize: that's what you're doing. And by smoking these cigarettes you're slowly committing suicide. Giving yourself lung cancer or something. Then you may remember the words of C.G. Jung, that life is an incurable disease with a very bad prognosis, which lingers on for years and invariably ends with death. Everything you do is bad for you. Like the little boy, four years old, who'd got sunburn and the skin was peeling and he looked in the mirror and said "so young and wearing out already." You know, all energy wears you out. Everything is going into dust. But, as I was suggesting this morning, when you understand that life, that your birth was being kicked off a precipice, and that you're going to ashes. Remember the ceremony in the Catholic Church on Ash Wednesday, and everybody else before the altar and the priest put cigarette ash or rather the burnt palm leaves from previous farm

Sunday on their foreheads and said, "Remember, oh man, the dust thou art and unto dust thou shalt return. You remember the poem of G. K. Chesterton about dust? "What a vial of dust, the preacher said, he thought the whole world woke." And he goes on and he talks about everything being a kind of trembling dust. And he ends up by talking of that final day, oh no not the final day the first day, when God was with the angels. When God to all his paladins by his own splendor swore to make a fairer face than heaven from dust and nothing more. So it is to the extent, you see, there's a kind of a paradox in all this, to the extent that you completely accept the dissolution of everything into dust. That by doing that you let go of that clinging to permanence, to yourself, to security, which releases all the energies of life to the degree that you are willing to become dust, to that degree you are alive. And that's how a person could see the vision of God in an ashtray. Now I've spent a few minutes taking some trouble with words to explain the ashtray as a vehicle of the vision of God. Now if you're a painter it's not just enough to take... Let's say you're a sculptor, you're a person who presents objects of art. You can't just get away with putting a nice walnut cube, beautifully polished, filthy ashtray on it, enclose it in glass case, put a label on it and say "beatific vision". That will shock people a little bit. It might give them pause. But if you are really skillful you will understand how to paint an old ashtray, or photograph it, in such a way that people's hearts will stop. Say: Look at that. But to do that it will be necessary for you to show all the individual little pepper and salt patterns in Ash. As a collection of tiny jewels. Which is how you can see them. But you have to represent that and carry it out and bring it through. Just in the same way as the people who painted Persian miniatures, which are painted jewellery, would look at trees and grasses. And rocks. And suddenly show them as full of interior light, enchanted, divine. By a very skilful technique. But you have to have that technique to bring it through. Some form, some possession, some complete mastery of an artistic technique is necessary for the bringing-through of the vision. So then our young people have stumbled on a key to the vision. Psychedelic chemicals and such things. But they will not be able to bring it through unless they also have the skills. And therefore the attitude of the older generation in the situation will naturally be one of great concern and worry as to what this kind of easy mysticism, too easy mysticism shall we say, is going to bring about. All this has become terribly popular for the simple reason that human beings need

religion, are starved for it, and that the churches have not delivered. They have not delivered the experience therefore alternatives are being explored. It is quite natural. But, as I repeat, you are rightly and properly concerned as to what will be the outcome. And the only way to make a good job of it is, instead of saying: suppress the whole thing, which never works anyway. Is to emphasize the point: "All right, all right, you've done this, this is what you've seen, you've had these experiences. But. There is a great deal more to it than that." In my own study of these kind of experiences I could not have really, really enjoyed them unless I had, before that time, been trained in all sorts of ways. Not only to understand the doctrines and the symbolism of religions, mythologies, but also simply to speak and write. Because unless you know the art of language, or you know the art of numbers, or whatever it is whatever is the vehicle through which you express yourself, you can't bring it forth. That one of the great puzzles of life. Consider people who had a great love affair. Dante and Beatrice. Everybody knows about that love affair because Dante could express it so gorgeously. But supposing some people who had a love affair and all the guy could ever say to the girl was Urgh. That. This is a real puzzle because is that guy any less in love with the girl than Dante was with Beatrice? Perhaps it was the same degree of love. But obviously the effect for mankind of Dante's love was far greater than the guy who can only say Urgh. See? They both go into the paradise, they both go into the beatific vision. One brings it back and shares it. And this is the distinction which is made in Buddhism between two kinds of Buddhas. There's the Buddha who attains nirvana for himself, he's called a Pratyekabuddha. And there is the Buddha who crosses and sees Nirvana and comes back to share it with the whole universe, with everybody, with all sentient beings. He is called Bodhisattva. And it so turns out that in the literature of Mahayana Buddhism, Pratyekabuddha is almost a term of abuse, whereas a Bodhisattva is the ideal form of man. Because the Bodhisattva realizes that he does not have the vision, really. But let me put it this way: I don't have it if you don't have it. Because I have it only to the extent that I can give it away. That I can give it up and to. I'm quoting Gary Snyder, up and to all others. But in order that people may master these disciplines, and this is the responsibility of the older generations, it must be understood that working on the disciplines is fun. And this is the task of all good teachers. All really gifted and great teachers are people who never have to resort in their classes to artificial methods of imposing discipline.

They need no proctors, they need no punishments, they need no bribes. Because the good teacher is the person who makes the work of learning, the discipline, so completely fascinating, that the student is embroiled. The reason being that learning a discipline is not a matter of forcing yourself. And here the English language leaves a little bit to be desired. We have a paucity of words for effort. For application, for concentration. We can talk about, when we're talking with children: you must apply yourself! Now it's perfectly true, nothing in the way of a skill will be achieved without practice. But if practice is strained still nothing will be achieved by it, except resentment. And many a little boy learns to hate the violin or the piano because it was drummed into him: this is what you got to do, you got to apply yourself to it, Dududududu, driving it home. But, on the other hand, if there is a way of fascinating a child with the discipline of any musical instrument, or what have you, then they can apply themselves day after day after day after day. And be fascinated with the discipline. So this is the skill of the teacher. This is Upaya. I used the Sanskrit word this morning, skillful means, to get the student to love the art. Because remember this principle: if your student does not learn to love the discipline he will never be any good at what you're teaching him. Now, you may know that a certain kinds of scholars do work that most of us would think very tedious. Let's suppose I talk a few about which I know a few smatterings which is the study of Chinese. Chinese scholarship is very difficult. You have enormous amount of characters to study and you have to look up things in dictionaries and consult volumes of this and volumes of that, but the true scholar is a person who just loves doing that. He'll spend a whole afternoon going after one character through all sorts of things, sifting this reference and that reference, and he will he'll be having more fun than someone at a bowling alley. Doing just that. And from the standpoint of an external observer, who has no particular interest in this, they'll say "oh, how hard he's working." You know, in my private life, I must confess to you, I've had a terrible time with this because I love my work. And people who had absolutely, say, no comprehension or interest in what I'm doing would wonder how do I keep up the pace, how can I possibly do this that and the other. I love it. But then there are other people who say, "You never do a lick of work in your life. You're playing all the time. Just goofing off. It's too easy for me because you love it." But that's the only way to get it done. And done well, because if you have something that is, say, a good marriage.

A good marriage is not the result of forcing yourself into that marriage. Are you seriously supposing that if you say to your husband or wife, “Darling do you really love me?”, and your partner answers “I’m trying my best to do so.” This is a simply not a satisfactory marriage. We are not going to get beautiful work by mere effort against the grain. When you could tell a cook instantly by tasting one mouthful of a dish, whether it was cooked out of a sense of duty or cooked out of love. Now. A person, say, who cooks out of true love will of course encounter days on which it is difficult. But somehow the overall love of the art will manage to get in through those days when it’s difficult. And so with marriage, and so with the mastery of any other art. But it is on the end of the older people, it is up to the teachers, the parents. To present the disciplines of life as something not does that you ought to know. But as something that it is beautiful to understand.

Now, let’s look at the cold question from quite another point of view. One certain way of approach is appropriate for the young, but what what way of approach is appropriate for the older, so that they should be able to take this approach to the young? Many of us who are older inherit teachings of discipline which were all forced on us. And we’ve learned to grow up dull and rigid. And so I could say things to this audience that I would not possibly say in an audience of students. It’s up to you to loosen up and to become a little mad. There’s no point saying that to a younger audience because they’re going to do that anyway. But a great problem for the generation of parents and grandparents is psychic rigidity, because we have been indoctrinated for a long time in not being able to trust ourselves. And this morning I was discussing, you know, Chinese ideas about trusting human nature. About spontaneity, the disciplines of spontaneity and so on and so forth. Now, this becomes a peculiar importance to people who have passed the threshold of the middle of life. Because, in the first half of life, if you live your life properly, you are supposed to set up yourself in the world, have established your business, your profession or whatever it was. And in the second half of live you got to get ready to die. Now. Are you ready to die right now? Supposing, I mean, we were going to be annihilated by an atomic bomb in, say, five minutes. I’m supposing we’re going to be annihilated by an atomic bomb in five minutes. What would you think you ought to do between now and then? R.H. Blythe asked this question to a Zen master. What would you do? He said I would practice Zazen.

Meditation. Blythe was disappointed in this answer. Because he had put it: Would you like to listen to your favorite music? Would you like to make love to a beautiful woman? Or would you just go on a sort of with everyday life as if nothing happened like somebody winding up his watch on his way to execution. He once asked a Zen mistress, there are such great ladies, an old nun, you know, who was a great Zen teacher. "Where do you think you're going to go when you die?" She said, "I don't think I'm going to go anywhere." He said "In that case I'll go with you." She said "Oh, that's so nice, that's the first time a man is ever wanted to go anywhere with me."

But, you see, in the end it is traditional. All cultures have understood this in some way or another, when you enter the second half of life, the business of that part of life is to get ready to die. That sounds to us terrible. To prepare for death. It suggests preachers coming around and saying "Are you ready to meet your maker?" You know, urgh. And so, as a result of that, in our culture death is a thing that is completely swept under the carpet. You go to hospital and they don't tell you you're going to die. They pretend it's going to be all right. Uh-hu, don't worry. And all your friends and relatives come around when you're lying in bed with cancer on the end of a lot of tubes. And with a kind of weak smiles on their faces say, "Well wont it be nice and two weeks from now when you're feeling better we'll go down to the beach." and those that and the other. And you know very well, deep down, even if you want to admit it, that things are pretty rough. Especially when they start talking like that. We seriously need an entirely new approach to death. We need entirely new hospitals. We need sanitarium for the dying, where dying is made into a work of art and a real achievement. Where, when you're going to die, and it becomes fairly certain: this is the end. I'm talking about this specifically because if you understand the last minute, then you can kick it back into that whole of the second half of life, which is a preparation for the last minute. But the thing is to understand the last minute first. Let's say we take an entirely different attitude to death. Say now, look, quite different. The way we say to the young "build up your strengths and your skills so that you can take on responsibilities." But death is where you're going to be absolved of all responsibilities. They'll be no need for you anymore and. Quite a different scene. But a very liberating one. If you can learn to enjoy it. Now, a man, a British obstetrician like Grantley Dick Reid has taught women how to have children without

resisting it, so that they don't talk about the pangs of childbirth but they talk about the tensions. About really learning a kind of masochistic ecstasy from having a baby. Now, some new physician has got to come on to the scene now and tell us exactly the same thing about the pains of death. Death is not a disease. Death is very healthy. Just as childbirths. Everybody has to die, you can't possibly call it a disease. You may die as a result of a disease or of an accident or anything, but death itself is not a disease. It is simply the other end of life opposite birth. And instead of regarding it as something to be put off and simply really disregarded, death is something for which one should train oneself. As a very valuable experience, because death is the automatic taking away of all your attempts to cling on to life. All that frightened clutch is simply going to be broken. Well it's pretty rough to have it broken. Why don't you let go first? So, in that case then, when somebody is about to die, instead of the friends and relations coming around and consoling him and saying you're going to be all right. They come around instead and say Wowie. This is the great moment for you, you know? Here is the colossal opportunity for you to realize who you really are. Because all that you thought you were is going to disappear. What do you suppose is going to be left? So you can have your choice in my ideal sanitarium for the dying- the way you want to die. Whether you want to die in a religious way with candles and priests and chants and meditations, or whether you want to die in an enormous and glorious champagne party. The principle is pretty much the same. Do you really let yourself go? Do you cooperate with what nature is doing in you? Nature is giving you, by death, the opportunity to let go of all this nonsense. Now, when you have passed the middle point of life, you can see it coming. You begin to read the obituaries, and this friend and that friend has disappeared. And you know it's on the way.

Now instead of avoiding this, what about it? Because nature is in this fact assisting you to let go of yourself. Making it easy what is very difficult for the young. It's hard for the young to face death, because they feel there is a there's a timeliness about death. I'm too young to die. Cut off so soon, and there is so much promise and much potentiality. It's very tough. But as we get older, nature helps us. We realize that, well, we've had it. Past the middle of life every day is gravy. But you are being helped, you see, to this act of release. There was one of the Zen poets who said, while living be a

dead man, thoroughly dead. And then whatever you do just as you will will be right. So there's a kind of higher zombie-ism. Those who are dead while alive, those who have given themselves up to death. And will therefore look forward to death as the great enlightenment, the great awakening. And this requires no Hokuspokus. No beliefs in immortality that you can't really be convinced about. It's simply that it's even better for you if you have no beliefs in an afterlife. If you're willing to let the future go completely and abandon any future. Anything that you could want to grasp for yourself or to preserve yourself, recognize that you're being forced to let it go. There is no promise of any future beyond the grave, see? I'm not saying that there isn't. I'm saying that the psychological state of not expecting anything, of facing death as if it were really the end. And you don't resist this. You end, you have the ability to end, this is central in Krishnamurti's thought. You'll find that if you do that something slips inside you, as a result of which you have no further questions. You will say to yourself, "Well now for the first time I realize what life is, what it's all about." Because I'm not looking to the future to answer my question. I know there is no future. I end up, "clonk", like that and all future is cut off. So if you do that, you see, you then and let go of yourself. Now then if you can let go of yourself, especially in the second half of life, in that way you cease to be to be rigid. What young people don't like about old people is that they're rigid. They're stuffy. It's like Ogden Nash wrote: The trouble with a kitten is that eventually it becomes a cat. And one understands this to some extent. It's very hard for, let's say, a woman who was once very pretty and is now afflicted with rheumatism and what have you, pains all the time, to put up with a great deal of noise and dance and stuff going when it just racks through your head all the time. And therefore you put on an expression that makes you look stuffy. You can't help it, it's very it's very rough. But if you're not racked with pain all the time, you're enjoying a reasonably healthy old age: Don't be on the defensive. So, to this part of life one must say: it is important to be a little mad. When a bridge built of steel doesn't swing in the wind it's going to crash. It has no give. And so, likewise, people, who don't have any give, are in danger of being insane. In order to be sane, you must have a (coughing fit). Just as I said the stew has to have a little salt in it, the good human being has to have our little rascality in him. And so the sane person, especially the mature person, must have a little craziness. And just as it says in the book of Genesis that God ordered that

every seventh day should be a holiday, one seventh of your life should be madness. Otherwise you'll be crazy. Because too rigid. And therefore it's important for all of us who are set in our ways, who are habituated to certain patterns of life, and we cling to these, to get off it. Not all the time. But about a seventh of the time. And learn to swing. And that means that the art of meditation, shall we say, for the older people is not necessarily what the art of meditation is for the younger people. It's the older people who need to be present at a happening. Where you don't know what's going to happen. Where anything might happen. Where you simply allow what it is in you to do whatever it likes. Chinese say???. Old gentleman said: "I let my mouth say whatever it wanted to say. I let my ears hear whatever they wanted to hear, and let my eyes see whatever they wanted to see. I let my feet go wherever they wanted to go. And then I didn't know whether the wind was riding on me or whether I was riding on the wind." After all, you are all practiced people, mature people who can be trusted upon to behave themselves and not like the monk of Siberia in the cell and devour the father superior. You're all mature. And therefore you can trust yourselves to let go a bit. And to be a little mad. And so I've just written a book, published a book called nonsense. And it consists of a lot of ditties that are unashamedly absurd. I was saying that these are great ditties for people to use while driving cars and shaving and washing dishes and so on. And you can invent your own just like mine.

But don't do it within the hearing of a psychiatrist. Now I'm just giving a sort of trivial illustration of the principle. That in order to release your creative energy, you have first of all to get some something going. And it doesn't matter what you do, provided you get it going in the first place. In other words break up the crystallization, get the water flowing again. Then you can canalize it after that and do specific an intentional things with it. But the first thing that is necessary is to have some psychic freedom. Because our culture and age and habitude to certain ways of life give you one terrific hang up, one terrific block. And you work on a certain pattern of behavior and the stream simply isn't going through you. And this will, as a matter of fact, if you do let it out you live much longer. [Background: "Well maybe they should just make marijuana illegal for the young, and LSD illegal for the young (...)] I won't I won't argue that rather technical point at the moment. But all I'm saying is that however whatever the

relation of chemicals is to the scene, quite aside from that, it is more important for the older than for the younger to have disciplined craziness. Disciplined craziness. There is a group of people, for example who are called Subud. I don't belong to Subud, I hold no advocacy for them, but they have a wonderful idea. They have gatherings for what they call the Latihan. And they last for half an hour. And during that time, somebody who is what is called a helper, says begin. And from that moment on for half an hour you do anything you feel like doing. Except with one reservation, you don't touch anyone else. But otherwise you will make any noise you feel like making, you do any gestures, any movements, and everybody rolls around on the floor and chants and bellows and squeals and dances and some people just curl up in a corner and groan. And then at the end of half an hour the helper says finish and everybody immediately assumes their ordinary social role. Well things like that are excellent. Because what they do is this: they release in us again the stream of spontaneous life. Become again as a child. When children do things like that. And once you've got it going, once you've got it released and moving, you can canalize it. But if it isn't going, there's nothing to canalize. So I'm simply saying that this is all extracurricular what I'm saying in this fourth meeting. You see, this is the last session.

So it's strictly extracurricular. Everything that I said before in this, in the three things, has to do with the university and the Blaisdell institute and all that kind of thing. But this has to do with YOU, who have come here and we are all quietly here together. That if you don't have that safety valve, that outlet, which is not just a safety valve in the sense that it's blowing off something that's accumulated, that's too much. It's a safety valve in an entirely different sense, it's a way of revivifying again. And having something going to canalize and to express in a creative way. And it goes along, all that kind of thing, you see, that non-programmed, spontaneous activity, which is pure nonsense, goes along with everything that I've said heretofore about non-verbal experience. And the importance of re-establishing contact with the spontaneous world, the non-verbal world, the supra-rational world. Not merely as something to contemplate while sitting quietly in meditation, but something with which to participate actively. You can, you see, have thoughtless awareness. But you can also have thoughtless gestures. You can make thoughtless or meaningless noises.

Whatever. Now I know that such a proposal goes ill with many older people's images of themselves. As responsible citizens, mature people, so on and so forth. Ha. But you've always got to have that little secret part of your life. You don't have to do it out in front of god and everybody. That's asking too much. But you must have that secret corner in your life. Where you can be the skeleton in your own closet. And be crazy. Otherwise you won't be sane.

The Future

The Future of Religion

This weekend is devoted to the future of religion, and I've introduced one kind of paradoxical gimmick into the series of seminars by saying that the best kind of future we can envisage is one in which we get rid of the idea of the future as a an area of experience which solves problems.

It doesn't. Western man has been obsessed with history in a way that is quite unlike any other culture and has seen the course of human events as a series of progressive steps towards a goal in the beyond.

And you will see that this is absolutely basic to the theology of the Jewish and Christian religions as we now know them. Although it wasn't necessarily always so, but they are absolutely wedded to the idea that the significance of human life has historical significance.

That is to say that the present has in itself no justification. It's only justified what we do now in terms of the way in which it leads in some kind of progressive pattern towards tomorrow.

And therefore there is that to use Tennyson's phrase. The one far off divine event to which all creation moves. And we may never enjoy that.

Maybe our children will, maybe our children's children, although actually the result of this is going in exactly the opposite direction to that of its intention. Living in a historical society, the one far off divine event to which all creation moves is so far as anybody can see it. The explosion of a cobalt bomb which will get rid of all life on the planet. That's history for you.

And therefore, the urgent task of today is to stop history and to do this by creating a diversion, a diversion from history.

Now, I've explained this in past seminars, but because some of you are here for the first time today, I'm just going to go over this briefly. Let's suppose we get the sort of situation where you've got a gambling casino and there's been a very dangerous game with high stakes going on for most of the night. And the stakes are getting higher and higher. And there's a huge assemblage of people gathered around this table where the contestants are betting not only thousands and millions and billions of dollars, but they've finally brought out their nuclear weapons and they've said, I dare you to blow the scene up first. Wowee, what a gamble. Here, you know, it's like in a powder magazine. You are sitting with a box of matches and say, if you don't agree with me, I'll drop the match and blow us both up.

So that's the kind of game that's been going on.

And it's on a collision course. And no one can stop it because the mental set of the contestants is such that they can't give up. Unfortunately, both of them believe in the life hereafter, in some funny way that perhaps the Russians don't believe in the life hereafter, but they call the westerns. Christians tend to believe in it.

So once, many years ago, when Professor Uri of the University of Chicago gave a talk to the assembled Episcopal clergy of the Diocese of Chicago and raised all sorts of horrors about atomic bombs, an old man got up who was the bishop of the sufferer and bishop of Chicago, Bishop Randall, and said after the clergy had expressed great concern, I don't know what all you people are so disturbed about, because all this man has told us is that we're going to die.

And we knew that already. And as Christians, we are not afraid of death.

So the clergy got up and said, hey, all right, it's all right for you. Bishop Randall, you're an old man and you don't have the problems of us young people with children and families and all that kind of thing.

But you see, what a dangerous man, a man who believes in the life hereafter can be, because he can say, better be dead than red, because he believes in a future beyond the grave in which accounts will be settled and the rest will be proved wrong.

Now, I'm trying to indicate what I stand for myself as a sort of half baked representative of the traditions of the Orient, is not a future life beyond the grave in the ordinary sense of the word. But realization of the fact that our true life is timeless. That we don't have a future in the sense that we will not carry over into future manifestations of our existence our personal memories about the will be future manifestations of our existence. Only we won't know it. We will experience it again and again, just as we do now, without remembering any past. Because if we did carry over into the future and indefinite and indefinite memory, conscious memory of our past, we would be bored. We would say this is the same old thing over and over again, and we've had enough of it.

But nature, just as we have in our biology, our physiology and elimination system decides an eating system.

So in our psychology, we have a forgetting system as well as a memory.

And it's equally important if you cannot erase if you cannot wipe the slate clean. That's the whole. That's the real meaning of the Christian idea of forgiveness, of the Jewish idea of the year of Jubilee. Forget it.

And then we can begin life anew and see this familiar world with the eyes of children, who find it all absolutely astonishing.

As we get older, we say, oh, well, ho hum.

We've seen the sun rise many times and therefore we need to forget. And that's the mystery of death. And therefore, a style of life which sets the future always as the thing to be worked for.

It seems to me to be biologically, physiologically, psychologically unsound, because it's always preparation and lacks the verve as well as the nerve to live now.

So then, this is one of the reasons today why the most extraordinary changes are going on in people's thinking. See, basically, people really do know what's good for them. They have an obscure unconscious sense. De Tocqueville once said a democracy is always right, but for the wrong

reasons. And this is why our laws in the British and American tradition, are really so sane, insofar as they say, well, ultimately, the people must decide what they want. Nobody knows. No individual knows what is good for the people. The people themselves know they don't know why, but they know in an obscure way.

And therefore, you will find at a moment when human survival is in jeopardy that there begins to be from, as it were, the grassroots of society.

A rumbling revolution that something's got to be different.

And what has got to be different is, of course, that our consciousness has to be changed. That Western civilization and to some extent Oriental civilization has gone on these many centuries, with an experience of what it is to be alive, what it is to be human, what it is to be a person that is a hallucination.

Namely, that you are an independent center of consciousness and volition inside a capsule of skin looking out upon, as we say, confronting, a world that is not you, that is alien, and that insofar as that world is not a human world. And most of it isn't, it is stupid, mechanical, blind.

Therefore, there's the sense of intense hostility towards the external world and the idea of so much promoted by the Jewish and the Christian traditions that the valuable thing about being human is that you are a person.

We'll go into that word person. But the idea is that the supremely valuable thing about human life is that you are an individual ego. And that by the force of your psychological effort and your independent will, you are going to control and transform the world. And therefore any point of view which puts down in any way the individual ego and its power to exercise mind over matter is repugnant to our cultural tradition.

This is very strong in the United States. I've often said, scratch an American and find a Christian scientist.

Someone who believes that you should not be in any way obligated to dependent upon the physical aids of life.

You if you if you're in pain, if you had a headache. Well, you shouldn't take aspirin. You should use your willpower or your faith or your something, you know, and overcome it that way. And these people are always blind to the fact that they do have to eat every day. There are all sorts of fantasies, a half baked Oriental notions, too, about people who definitely need to eat, who are surviving on one banana and a glass of water per day and sort of thing.

And that strikes the imagination of our cultures. What would be the ideal? That's why we cook so badly. We do not eat with gusto like the French. We eat apologetically like the British.

So, this extraordinary fascination with the good of human life as being summed up in the ego and its energy and its independence is an idea that had something to be said for it.

But you can always have too much of a good thing.

Now, I must repeat something that is always necessary to understand. Anything I'm saying is that I exaggerate.

I, instead of being moderate and taking due consideration for all possible points of view whereby we come to a measured, mature and balanced view of things.

If you do that as a philosopher, nobody will listen to you.

So what you do is you make an exaggeration in a certain direction to balance and compensate an exaggeration that's gone in the other direction.

So with our culture, the exaggeration has gone in the direction of the value, sacredness, of the ego. So I'm pitching the cause in the other direction and saying ego is a hallucination.

And that's what's the trouble with us, is that we believe in this and that therefore we in the possession of our enormous technology are fighting the external world and destroying it.

Look around in every direction. That's lovely, Marin County is being destroyed. By smog, automobiles, tracks, dwellings, water pollution, air pollution. Disregard of the forests.

You could go a little further up north and take a take a plane ride to Seattle to see what's been happening. It's just terrible.

So, we then find ourselves in this situation that we have inherited religions which emphasize salvation in the future, beyond death, maybe, or the Jewish people don't so much emphasize the idea of immortality.

Jewish people think of the messianic hope that the day of the Lord is coming, someday, when there will be a general knocking of heads together and.

The wisdom of Moses and Solomon will be vindicated.

But it's all set for the future and therefore, in both the Jewish and the Christian traditions, mystical religion is suspect.

There are not many Jewish mystics. Yes, the Hasidim are a special sect, but among Christians, you will not find the mystical very much favorite. There are great Christian mystics, but the Catholic Church.

Always says of mystical experience that it is an extraordinary grace.

And they mean by using the word extraordinary extra, ordinary. That is to say, it is something of a peculiarity.

Like a miracle that safe to certain individuals outside ordinary Christianity, ordinary Christianity. Way back in. The fourth century def definitely rejected Gnosticism in favor of faith.

Knowledge was rejected. One should not have knowledge of divine things. One should believe.

Because wherever anybody claim to knowledge, they were in danger of the sin of spiritual pride.

But you can equally be proud of my faith is stronger and your faith makes no difference.

So, the emphasis in the whole of the Christian tradition in religion has been knowledge of God in terms of belief, belief and a revelation, belief in a dogma. And so Christianity has not only not encouraged, but actually suppressed any religious manifestation which emphasized the primacy of experience, of knowing the divine as distinct from believing in the divine. Oriental religion, Hindu, Buddhist, is concerned not with belief at all.

Not with dogma, because it would say immediately. How can you express divine things in words?

All words are invalid when it comes to the ultimate reality. But it would say, on the other hand, the words may be invalid. There is the possibility of experiencing it.

And so the right experience, rather than the right belief, is the concern of Oriental religion.

So the the goal of the Buddhist and the Hindu is not salvation. It is liberation. Liberation in terms of an experience which is called Bodhi or Awakening. Samadhi or unity of consciousness. Moksha Liberation Nirvana. Letting go. That's what it really means. Breathing out, letting go of your grasp on the breath of life.

Now, therefore, the religion's so-called religions of the Orient have therefore become of extraordinary fascination to Western people since the 19th century.

Publishers are selling literally millions of books throughout the Western world on yoga, Vedanta, Zen, Daoism, especially to young people.

People under 25, if they have any pretensions to education at all, have read this about interest in. Because, as I said, they have, what Carl Rogers calls, positive growth potential. That is to say, knowing fundamentally when to get in out of the rain.

And that what need what is needed for Western culture, for technological culture, whether Western or Eastern. Is a new kind of human being. Not though, not as a moral necessity.

You know what we see when we talk about a new man in the Christian or in a Jewish context, it's always in terms of the preaching.

That you should reform. You should take yourself in hand. You should talk seriously to yourself and be converted. It doesn't work anymore.

Never did really work.

Because a person who is converted to an unselfish style of life by preaching is always a hypocrite.

Because he's not really been changed. He's trying to change.

He knows he ought to change. He feels guilty because of the style of life which he has lived in the past. And out of the energy of that sense of guilt, tries to reform.

But because he still experiences himself fundamentally as a separate ego.

All his new style of life is attempted love of other people, his morality, is a fake. And that's why it is so true that the road to hell is paved with good intentions. That is why do-gooders create so much trouble.

That is why eventually the do-gooder results of violence.

And employs the police. To do for you what is good for you. To shoot you for your own best interest.

That's where it ends up.

So therefore, Western religion, as we have known it in the standard brands of the Jewish and the Christian religions, is falling apart.

It is becoming of no interest, it's becoming a joke. And it's happening faster and faster and faster.

Despite the strong stance taken by the lunatic fringe of Protestantism, mostly in the southern and central United States, people like Jehovah's Witnesses and hard-shell Baptists.

That has all become incredible. In fact, ministers, rabbis. Do not believe what they're saying.

Some of them are honest enough to come out and say so. In talking about the death of God. If, for example, you really felt.

That, shall we say, a fundamentalist Protestantism is the truth. And the people who didn't believe in Jesus Christ.

We're going to fry in hell forever, and you really you really honestly believe that you would be screaming in the streets.

Because most of your friends. And not to mention your relations would be destined for eternal hellfire.

And you ought to be concerned about that. But they are not screaming in the streets.

They'll say, issue polite warnings over a few radio stations tracked.

But even Jehovah's Witnesses are reasonably well behaved and they knock at your door.

They don't believe it. They think they ought to. They're trying to con themselves into believing what they think they're supposed to believe, but nobody does. Most of the clergy who've been through a sophisticated theological training and I'm thinking particularly of Catholics, Episcopalians, Presbyterians, congregation lists, Methodists and all respectable religions.

They don't believe what they're talking about. The great problem is that they think that the lay people want them to hand out the old time religion? And we'll be offended and we'll leave church if they don't.

I like that joke in The New Yorker the other day, a couple of Episcopalian type clergy in the vestry with a collection plate, which is practically nothing in its.

And they're shrugging their shoulders and say, well, well, back to the good old generalities.

See what's happening is this. I've been very intimately involved with the problems of Bishop Pike, and his successor and the Episcopal clergy in this diocese, as I know them all rather well.

And they're having a terrible time. The reason is this: they're all very theologically sophisticated and extremely intelligent people, but they depend for their financial support on a very few wealthy individuals, most of whom are reactionaries. Therefore, by it, because of their liberal and far-out policies, they they're losing their financial support.

You would think that they would by being so far out, recruit an enormous new following, of young people, forward looking people and so on, but they don't because those people aren't interested in the church at all. And therefore, they are completely falling between two stools. Why, for heaven's sakes, aren't those people interested in the church at all? There's nothing that can be done about the church as far as I can see. Except let it evaporate.

Because by a curious principle, which we don't really understand. Symbols and myth have a vitality, which is like by biological things. They are born and they die. And the mythology of the Judeo-Christian tradition is dead. God is dead in the sense of God, conceived as personal.

Father of the universe, who cares about you? And upon whom you can rely.

It was an excellent article on this by Rabbi Rubinstein from Pittsburgh and Playboy's just recently. I think it was the June issue of Playboy. Because he made the point it was it was a surprising article, because when I started, I thought, oh, my God. Here's this dreary old stuff. There is no God. And the Jewish, the Jews are still his chosen people.

The Christian version is there is no God and Jesus Christ is his only son. I thought this was what was going to come up, but it wasn't. He switched towards the end of the article, and said now the death of God means the revival of mysticism, of the experience of the nothingness, which is the ground of the world. Or what Tillich called the ground of being. Now, of course, but he, in his article wouldn't have carried weight with somebody who wasn't theologically sophisticated. They would have thought he was saying, well, we ought to believe in nothingness instead of God not understanding the special theological meaning of the word nothings.

No thickness. Not nothingness in the sense is just 'blah'.

But the notion that the ground of the world, which is your center and your being, as well as that of everybody and everything else, is not a thing in the same way that the diaphragm in the speaker is not a noise.

Very much there. But it's not any of the noises that it makes. In a way, it's all the noises it makes, but yet somehow something else.

And so naturally, therefore, we can have no concept because all our concepts are concepts of things, concepts of events. We can have no concept of God. What is the meaning of the death of God theology is that the conceptual God is dead.

Nobody can any more. Talk the human race into. Some sort of concept of God, because the development of Christianity, Judaism and so on through their theologies have come to the point where nobody is gonna buy that anymore, actually. Of course, the concept of God in the Jewish and Christian traditions, as in the Islamic tradition, is based on.

The conception of kingship in the ancient Near East, monotheism is political. It is the elevation to the universe of people like Hammurabi, of the Cyrus's of Persia and of the pharaohs of Egypt and of King David.

And the title of God. King of kings..there's collect in the Episcopal prayer, especially, say, in the Church of England, where, of course, the politics is a constitutional monarchy. Priest gets up and says. Oh, mighty and everlasting God, the king of kings, Lord of Lords, the only ruler of princes

who dust from by throne behold as well as the former most graciously deign to behold our sovereign lady, Queen Elizabeth. You have plenty history with heavenly gifts, health and wealth, long, etc..

And so what you see is a court official addressing the throne.

So this time the title King of Kings was borrowed from the Persian Shah.

Cyrus was called the John Kahn, which means the king of kings.

And so that those royal honors, which the Jews didn't believe should be given to Cyrus, although they they had a special liking for him because he liberated them from the Babylonians. So they they just transferred the titles of Cyrus to God. To Jehovah.

So we've been hung up for centuries, with this political theory of the government of the universe as a dictatorship, it and be a constitutional monarchy insofar as God suspends his omnipotence and allows you a certain degree of free will, only you'd better behave in the right way.

You must choose to love God, say.

Because if you don't, there's gonna be trouble. But it's up to you. And I have a chance. It's really a very funny system.

But as a result of that, the most curious things develop into.

Let me just take a little side tracked into legal theory in the United States of America.

How can you as members of a group of the United States, where you believe and you do solemnly swear that you believe this to be the best form of government. When I moved into this country, I had to.

Face the immigration officers and they sat on a important looking desk with Stars and stripes behind them, and they said, what do you think of the former government of the United States? Well, I said, I think it's a very good form of government. [laughs] OK, so but when you actually become a citizen.

That was a later process. You renounce all other allegiances and you do solemnly swear. Cross your heart and hope to die. That the American flag represents the ideal form of government. And it's a republic.

How, then, can you believe that the universe is a monarchy? You just can't do that. One nation under God is an absolute contradiction. Because then when you say it's under God, it's not a republic anymore, it's a monarchy.

So now what happens? You were. Our young man and you are called to the colors to fight.

And you find it against your conscience to do so.

You don't believe in killing people.

What do you have to do? Well, this has been modified recently, but what you always had to do was to appeal over the head of the nation and the president to a superior authority, called the supreme being. They didn't actually say God because they wanted to allow that. Not only Christians, but maybe some Mohammedans and people like that also might do this, and a few rationalists who believed in a supreme being like Woostya [sic].

But you had to, in other words, to accept the military view of the world that there's a chain of command going down from the highest bus and you say to the commander in chief of the United States since President Johnson. I have word from a higher authority than you personally conveyed to me that I am not to fight in this war or any war.

And they have to say it because of freedom of religion. And it's always complicated game. OK. You're accepted. You don't have to fight because you've appealed to a higher court.

So therefore, a Buddhist or a Dallas finds himself in a very funny position because he doesn't like this word supreme being. Because he doesn't view the universe as a military operation with a commander in chief or a monarch at the top. He looks at it as an organism in which all of us are, as it were, the arms of God, like the legs on a centipede. So there isn't a chain of command. It doesn't work that way.

Well, the courts have recently more or less decided the word supreme being can be taken extremely vaguely. Like the famous story of the House of Commons when they were debating in 1928 on the revision of the prayer book for the Church of England, somebody got up and said, it seems ridiculous that this house, which contains a number of atheists, should be debating on the whether the Church of England should have a new prayer book or not.

Somebody got up and said, Oh, I don't think there are rarely any atheists [here]. We all believe in some sort of something somewhere.

There it is. Now, so the political theory of the universe as a monarchy, as a patriarchy simply does not make sense to people anymore.

It's worn out, the view of the cosmos delivered to us by modern astronomy and modern physics.

It is so magnificent and so. Stones the mind.

That's the real meaning. To be astounded.

A stone in everybody's gonna get stones that it it just doesn't jibe anymore.

We've seen it's like style in works of art. You very well know when you listen to Shostakovich that it wasn't written by Bach.

And when you look at the universe as revealed to us through modern science, you know, it wasn't written by Jehovah.

It's too big, it's too amazing.

And some people just abandon everything and say, well. For heaven sakes, let's let's let's keep control of this thing. Let's not get stoned. Let's say it was just a mechanism. See, it's stupid. It's just that just the thing going on, not going on like Newton's village games.

And that's simply self-defense. Against allowing your reason to be bulled over, by amazement at the nature of the world, of reality, of yourself, of

your organism, of your brain, your nervous system, everything and control around here.

Oh, yes, we all understand what's going on. It's just nerves, just protoplasm, molecules, stuff.

We understand at all. This is a you know, this is a defense mechanism. So that doesn't work.

That doesn't appeal to anyone today. Monarchical theory of the world doesn't appeal to anyone today. I mean, it's it's it's fizzling. There are still a few people who dig it, but it's on its way out.

So what's gonna take its place? We see this fantastic growth of interest, therefore, in experiential as distinct from dogmatic religion. Now, I may have a slightly prejudiced position in this because I've been involved for years and years in trying to explain Oriental philosophy and religion to Western people, and therefore, naturally, it would have pleased me to think that all kinds of people were interested in this. But what I have today is a very odd feeling that I'm slightly alarmed that what I said has been taken so literally by young people.

And suddenly they really say you meant that. Yeah. You know, they're coming on and though, hey, wait a minute, wait a minute, wait a minute. You say. Don't take me too seriously.

But this is always the case.

When the older generation has taught the younger generation this, that and the other and the younger generation says, yeah. The older generation is now. Now, wait a minute.

We are not quite such good authorities, as you may have thought, because you see the amazing vitality with which a change comes to pass and you think, well, maybe it is immature and will overstep itself and is being a little bit unwise in this way and that way, it was ever thus.

Young people were always immoderate. You know, hurray!

Otherwise, they wouldn't be young.

So, what I think. The death of God, movement in the existing churches, is something like this.

The individual clergy have at last got to be honest.

They can't go on going through the motions and preaching a religion that they themselves don't believe in. But they've got to make a jump. It's not enough to say God is dead, and therefore life is nothing more than a trip from the maternity ward to the crematorium. And how in that interim, shall we apply some semblance of Christian principles? That's what many of them are trying to wrestle with, what we call secularized Christianity or religion-less Christianity. To use the phrase of vote man and a bunch of money. Both man calls it the D mythologized Bible. I have tried to have this out the some of the important figures in this movement and notably the bishop of Woolwich.

And Hamilton and Alltizza [sic]

And there is a chance. Pike to. It isn't that.

We're saying, there is nothing at all that transcends. What we call common or garden reality.

As a matter of fact, what we call everyday reality is pretty much a myth.

Psychiatrist believe in it and in that effect have a sort of vested interest in maintaining that everyday life is dull.

That it's just a matter of like a hospital where you've got scrubbed white tiles and bottles that clank and so on. And that's that's reality. You see, hard floors Monday morning, rather depressing. Get on with your work.

That's supposed to be the real world. Face it.

Well, that's simply again, that's a form of the same self-defense against the marvel of the real world.

As you know, the theory [that] it's nothing but molecules.

It's all nothing buttery.

Thing is, we don't know what it is. And we are scared stiff to admit.

We don't know that we are in the grip of a fantastic miracle and that the biggest miracle in the whole thing is what we call your-self.

That's the thing you should be scared to death of. You just immediately, because what can it do can frighten itself. It can run up behind itself and shriek 'boo', move and jump out of its skin and go through all sorts of things. But fundamentally, what else is that?

It always has to look as if it wasn't there. All that was out of control or that otherwise would be no fun.

So, what, what would be a very constructive thing to happen is if the death of God. Theology. Would. Ally itself with the ancient tradition of mystical theology which in both India and reasonably early Christianity. Would say every positive idea about God is wrong. See, they in Greek. You have two kinds of theological language. One kind is called cataphatic.

From Cata. Fehmi Fehmi is to speak.

So cata, the particle, means to speak according to, metaphor.

God may be spoken of according to he was like a father, but he is not a father. God is not a cosmic male parent, but we say God the father, because there is a certain analogy between God's relationship to the world and the father's relationship to his children. So to speak of God as power, as justice, as kingship, as light, as whatever was catafalque language. Then they said there is apophatic language.

Now Apo is a particle meaning away from. Away from, speaking so apophatic words are eternal.

Which means non-temporal in finite, unlimited, formless modulus, etc., etc. all those negative words are the apathetic language. And so these people

held that the apathetic language was the truer language of the two. Even some Thomas Aquinas and nobody reads anymore said in order to speak of God, it is necessary to proceed. By the way of emotion. Because God, by his immensity, exceeds every concept which our mind can form and therefore we speak of God as limitless a tunnel in much the same way that a sculptor reveals an image by knocking stone away.

He doesn't add anything, he just takes away, and the image is revealed.

So in the same way these mystics of the very ancient Christianity particularly Dionysus

Was actually Shankara. The great writer or nondualist Vedanta interpreter, actually, Shankara and St. Thomas Aquinas are just about contemporaries.

And if they had ever been able to meet, they would have understood each other perfectly. They talk the same language, they reasoned in the same way.

But Shankara went a little further over the precipice.

In. Not feeling the necessity to cling to any fixed conception of the divine. But there you see the point is now is not simply that you are getting rid of an idea.

And doing without as if it were an impoverishment. Getting rid of the idea of God is an enrichment. Because it opens you up to experience the reality instead of the idea.

I call it spiritual window cleaning. You take the image that you've painted of the sun off the glass.

And by getting rid of it, the sunlight itself can come into the room.

So by the act of getting rid of all idols, that is to say, intellectual images.

Of God that you cling to and think this makes me feel safe. This makes me able to go on living, etc.. There is nothing.

See. And when there is nothing to cling to.

No way of pinning it all down, pinning the universe down, pinning you down. That I say, well, I really know who I am now. That's safe. Isn't any such way.

So that's that's why, for example, a person who is neurotic, who is going through a psychotic crisis is actually in a very positive state if the doctors would get around to seeing it that way.

Because there are people who have the jitters because they don't know who they are.

Anything might happen. How do I know I'm going to be able in the next five minutes to continue the mastery of the English language.

It's just that I've been doing it all these years and I suppose it goes on. But I could very well talk myself into a great worry that I might not be able to do it. Then how would I earn a living? [laughs]

Would you see you never do. No, not really. Oh.

Because you don't even know how you make a decision. How does your brain enable you to make an act that will, you know.

So the psychotic is the person on the edge suddenly realized how scary it all is.

So what then?

The guru does for a psychotic is saying, instead of you've got to be put away.

You're dangerous, you're awful, he says. Come on. Come on. Make it. Make it, make it. You're just just getting warm.

Let go. Stop being frightened of insanity. Chaos plunge into it.

That's the only way you'll recover. That's the act of faith.

Well, now the next question that arises in discussing the future of religion is whether Judaism and Christianity can in some way be saved? And this is a question with many aspects to it. It isn't only a question of the reinterpretation of doctrines, what [the] Pope Paul, Pope John called *aggiornamento*, the updating of Christianity. The question of the institution. What are we going to do with the church buildings? What are we going to do with the organization? What about all these people employed as ministers? What function have they could they have in the future development of religion? If we agree to the idea that the gospel is no longer good news, but just a bore, is there any way in which this can. This whole thing can be salvaged? I've had myself different changing views about this. First of all, I would say that.

The function of a priest is to destroy the church, because the church, if we can I can restate this, you see in the classical terms of Christian theology. The church is the body of Christ.

What does that mean?

Well, if you go back to. Classical Christian theology. Here's your idea.

What is Christ?

Christ is the incarnation. Of God, the son, the second person of the Trinity. The second person of the Trinity. Well, we have to go back and explain the Trinity.

You have to have a Trinity conception of God, if you think in a language based on sentences, whether a subject's verbs and predicates, because the basic structure of the sentence. Is I love you. So I is one aspect of it. You is the country aspect of it. And love is the joining aspect. So if God is love, then I is the father. You is God the son, and love is God the Holy Spirit.

All the reasoning about the Trinity, why there was a doctrine of the Trinity goes back to that. And you see that all the thoughts that were moving in the minds of those early theologians, they didn't understand this themselves. They didn't realize that they were hooked on a three parts sentence and

therefore had to think that way. But that's why it emerged. And so if you, a wise theologian, you don't knock down the doctrine of the Trinity.

You merely realize the obvious reasons why it arose. Because if God was only one. God could not be love, unless the object of God's love were his creations, that if his creations were the objects of his love, then he could not be love without his creations. Therefore, God was not a self-supporting system. Therefore, they had to find out reasons for God being love in his own right. That meant the Trinity. And that's led to endless complications, which I will sidestep at the moment and go on with the main theme that Jesus of Nazareth was supposed to be the second person of the Trinity, God, as the object of his own love and of his own knowledge. Embracing and becoming finite, the finite state, the human state with the suffering, with the difficulties, with the limitations that all that involved.

And this is called in Greek theology. Kenosis, this K noses k e n o a s I s it means self abandonment or self emptying.

Now, by virtue of that the whole physical universe is believed to be altered, insofar as the creator became the creature through the body, the physical body of Christ.

All physical bodies whatsoever are touched.

So that St. Paul uses the resurrection of Christ and he calls it the first fruits of those who slept. Christ rises from the dead. Overcomes death by accepting death.

And by this means then all the physical universe is in process of being changed into the body of Christ, that is to say, the union of creator and creature. And so, the church doesn't mean buildings, it doesn't mean clergymen, the church, the ecclesial meaning the assembly of those called together, the original idea of it is that this is the leaven. Like you put yeast into bread and eleven elevens the whole lump using Jesus's own illustration. The church is the leaven, the organization.

Oh, let's better say the organism through which the entire universe is in process of becoming converted into the divine.

You call this apotheosis, meaning the divine-ization of something.

And so when the original meaning behind the Christian mysteries is that when a person is baptized, he is joined to this leavening process, which is ultimately going to extend not simply to people, but to weeds and grubs and birds and stones. That ultimately, through the leavening influence of the church, the whole physical universe will be converted into Christ. Where the word Christ means. Not only the historical character Jesus of Nazareth, who is regarded as the beginning of the process, but where Christ means the created world and the divine world in perfect harmony and union. So here you see, is it is a fundamental notion of Christianity. That the world is in process of becoming the body of Christ.

So then the question, you see, that I posed at the beginning is that the priest of the Church of the institutional church will in fact further this process of becoming the body of Christ by destroying the institutional church.

Why? Because the institutional church. Has become a purely political power. What do you do? Let's let's take this problem in a very practical way where I speak from long experience. I have a friend, a good friend who is the. Rector, Vicar or whatever of the Episcopal Church here in Sausalito, and he's a wise man. But what are his problems? He has an expensive plan that he has to maintain. Not only a church building, but a parish hall room, Martin. And he has to be sure that there are enough people in the community who annually pledge so much money to maintain this operation. And therefore, he is interested in upholding the building. And yet he knows in his own heart that that's not the way things should work.

So then, I've often wanted to preach a sermon at the laying of the foundation stone of a church where the stone is ceremoniously laid. And I will take as my text from the Gospel of St. Matthew. If a man's son ask him bread, will he give him a stone? The answer is yes. You will find again and again, that if you want to raise money for a project, you can far more easily raise money for the erection of a building.

And you can for the support of living people in their work as scholars or priests, physicians or psychiatrists or whatever it may be that they do, you can't get money for people. You can get money for buildings.

And so, the priest then has to say we must destroy the church, burn the buildings down. Deny all the doctrines. Because the whole symbolism is that it was by the breaking of the body of Christ that the salvation of the world was delivered. When Jesus predicted his own death to his disciples, they were scandalized. They said, but it is written in the tradition that the Messiah is not subject to death. This is in the gospel of St. John, and Jesus replied, If a grain of corn does not fall into the ground and die, it remains lifeless and isolated. But if it dies, it brings forth much fruit. So therefore, it is only through letting go of the process of clinging to life, which is all our fixation on immortality, on preserving the valuable things, etc., this huge anxiety that we hold on.

So he was saying, let it go. So then when the priest celebrates mass, what happens? Was it easy to understand this? We have to go back to the very meaning of the mass in the civilization of the ancient Near East, the Mediterranean world.

The staple food was bread. From wheat. And the staple drink was wine. You didn't, if you were in your right mind, drink water. Because it was polluted. And therefore, an alcoholic content in the water was a safeguard against infection.

So they had a way of making wine, not quite like our wine today. It was a very sick mixture. It was like concentrated port. And they served at table what is called a cratya in which we get our word crater, which was a shallow bowl like cup. And they poured wine into this and they mixed it with water.

And this was the staple drink as today children in Greece, in France always drink wine. They don't consider it alcoholic luxury. They consider it food. So then, in this state of civilization, bread and wine were the staple food and drink. Now, bread is made from crushed wheat and wine is made from crushed grapes. So there's an idea of sacrifice that the life of the wheat and the life of the grapes is sacrificed that we may live.

And therefore, Jesus identified himself with the sacrifice, with the universal process of biology, whereby all biological beings live in a mutual eating society, and we are only sustained by feeding on other forms of life. But he

switched it. Instead of saying this is a situation in which we are predators and we clobber these other forms of life, and alas, you know, he put himself in the position of everything clobbered and said, I am all those creatures that you destroy and eat, therefore taking the bread.

This is my body which is given for you. Do this in remembrance of me. And then taking the cup. This is my blood of the New Testament. That is to say, the New Testament means relationship, really.

DRC key in Greek, the new dialog, the new interchange between man and reality.

And the New Testament is that it's not that you clobber the world and feel terribly guilty because you've eaten fish and cows and wheat. But that I, God, gives myself to you through the wheat, through the grapes, through the cows, so the blood is shed for you for the remission of sins. In other words, please take this offering and don't feel guilty about it anymore. Because the I, in the form of the victims, give myself to you voluntarily.

So then, the idea of the mass of Holy Communion or whatever you want to call it, is the breaking of the bread and the crushing of the grapes. That through the sacrificial act, this destroying act, life has given. Therefore, when a priest repeats the sacrifice and at the altar, he takes the bread in the form of the host and breaks it and pours out the blood, pours out the wine, all that becomes merely ridiculous symbolism.

If he is not also ready to break up the church. That means to knock down the idols, first of all. That is to say, the dogmas upon which people rely and lean suddenly discover the death of God, you see?

Suddenly discover the historical Jesus is something you can't put your finger on. Maybe the resurrection didn't happen. You know, there's nothing to cling to, no miracles possible, perhaps. Break it up. And above all, break up the organization which is a political institution with enormous property holdings, generally exploiting the public.

Then on on those conditions, if the if the clergy, if the ministry were so to break up the church, the church would come to life. It would become a

significant institution again, which it now is not.

So, the next thing is this. There is another aspect to the breaking up of the church. I spent some time this morning on going through the political analogy of the kingdom of God. God, as the big boss whom everyone must obey. Now, there are two themes in Christianity.

One of which is political and the other of which is organic. The political image is the kingdom of God. The organic image is the body of Christ. Or the symbolism of the vine. I am the vine and you are the branches. Indeed, one of the most extraordinary books in the Bible. That love poem called The Song of Songs has a theme of a love relationship between the creator and the creature in which all the imagery is vegetative as distinct from urbane. So a transformation of the church from the political urbane institution to the vegetative organic institution where the image of the government or the land no, not the government, let me say the order of the world changes from that of the palace, the city, the kingdom to that of the vine and the body, the organism.

This is the inner meaning of the incarnation of the union of God and man, while God and man are not truly united. Then order must be imposed from above. When God and man are truly united, in the spirit of the prophet Jeremiah, who said no more, shall every one teach his brother saying, no-God.

But they shall all know me, for I will write my law in their hearts.

And the law written in the heart, you see, is entirely different from the law imposed from above. The law written in the heart means what comes naturally.

Now, Jesus was a very clever guru. And in order to get people to have the law come naturally. He parroted the law imposed, and he did this in the gospel of Matthew, which is never read correctly.

You know how it begins with the Beatitudes.

And when he says blessed are the pure in heart, in much higher ups, in Greek means happy, not blessed in the sort of unctuous sense of which that word as an English, it means happy.

My kairos are the pure. It doesn't mean the people who don't tell dirty jokes. Pure means clear, transparent. Hip, aware, not hung-up. Now, he then does a very strange thing.

He says. I have not come to destroy the nonprofit's. Not to destroy, but to fulfill.

For I tell you, that not one ornamental serif or punctuation mark shall be taken away from the law until the end of the world. Therefore, you've got to obey all those forms.

The the scribes and the Pharisees pride themselves because they obey the law very thoroughly. But you must be more righteous than they are. Unless your righteousness exceed the righteousness of the scribes and the Pharisees. You will not be able to enter into the kingdom of heaven.

So to underline this and exemplified you have heard it said of all time. There are series now of crimes. One is to be angry with your brother. Another crime is to call him something that would correspond to our way of saying to a person, you bastard. Another way would correspond to our way of saying to someone, you're a fool. Now, obviously, to be very angry is the major crime.

So what he does is he reverses the order of courts. We might say we have a magistrates court. Or let's say we have the Marin County courts in San Rafael. We have the state of California Superior Courts in San Francisco and we have the federal courts leading up to the Supreme Court. Now what he does is a funny thing. He switches the order. The for the major crime, which is being really angry, he assigns you to the lowest court. For this, the minor crime, which is calling someone a fool, he assigns you to the major court, which is held fire Gana.

And then if you keep reading on in the Gospel, you know, everybody reads in the King James Bible, whoever says thou fool shall be in danger of

hellfire. And because they instead of using quotation marks, it uses a capital letter for the beginning of what would ordinarily be in quotes? People think the sayings are full means calling God a fool. It doesn't mean that at all. It means if you read it in Greek. Myra in the vocative means fool thing to some your brother, fool, you shall be in danger of hellfire.

But later on in the same gospel, he addresses the whole crowd and uses the same expression in the plural. My right. You fools and blind, following blind guys.

You see. He doesn't even obey his own precepts, so his precept must be taken, ironically. He's a humorist here. He's saying, you Pharisees, you you think you're so great because you obey the law.

Now, look, I'm going to give you a law. And you obey that other words, it's the technique of reductio ad absurdum because what does he do next?

He says you've heard it said of old time. That. You shall not commit adultery.

Ha-ha. Did I tell you that anybody who looks at a woman to lust after her has already committed adultery in his heart?

So all these pious fakes think, oh, we shouldn't have lustful thoughts about women. That's awful.

Who doesn't have lustful thoughts about women? You don't always have to act them out. So then he goes on in this joke. Therefore, if your eye offends you, you know, you. You looked at that girl and kind of thing, pluck it out.

Has a better view that you enter into the kingdom of heaven with one eye rather than I have to go into hell with two eyes.

You know, really, this these ministers, these theologians have absolutely no humor at all. Well, the whole thing is a joke.

So likewise, your adversary wants to take away your coat, give him your cloak also. You're gonna be so he says, you know God. It's absolute

perfection. Makes his son to shine on the evil on the good and sends his reign on the dust and on the unjust. You do the same thing. Well, nobody can.

Can you love your enemies? Can you take no thought for the morrow? Can you be as carefree as the birds and the bees? Can you really sincerely love God and your neighbor with all your heart, with all your soul and all your mind? Who can?

Here's the thing he's doing. He challenges he throws this whole thing at you as a koan, pretending it's a commandment. And everybody in Christianity has tried sincerely to obey these things, except that every minister gives up on that take no thought for the morrow. Britain says it's not practical. Why? So the meaning of it is it is to. You shall love God. You shall love your neighbor. And no faking, please.

That is a fake. Come on. It's a test. It's a, it's a reduction ad absurdum of the whole idea of law. Of enforced goodness, because one must obey out of fear of divine power.

Because if you obey out of the fear of divine power, your actions are not significantly moral. Their actions are significantly moral only if they are done out of love, and love would not be motivated by fear. How are we to love?

You can't love. Possibly, not possibly why you while you still think you're an ego.

Why you still think you're separate from other people in the rest of the world. You can't love it all. How then do you overcome being an ego? Why? Obviously you can only overcome it if you in some experimental way find out, that the ego is a delusion. So therefore, Jesus proposes as a way of finding out that your ego is an illusion, that you live up to these ideals.

Now, I can go on further. I don't know if anybody reads the Bible anymore. Whether this means anything to you. St. Paul in the Epistle to the Romans has an argument which is very clever. He says that God did not give Moses

the law with the expectation that it would be obeyed. Indeed, he says, I learned sin through the law. I had not known covetousness except the law had said thou shalt not covet.

Then he poses this funny problem. Shall we then sin that grace may abound. This is I don't know, heaven forbid. Methu Cannito bias and now look. The reason why God gave the law was to convict us of sin. It was not in the expectation that the law would be obeyed, but only to show us how far short we fell of the Divine Life.

So, exactly the same reasoning this therefore applied to the precepts of Jesus. Not given in the expectation that they would be obeyed, but in the expectation that through trying to obey them, we would discover that we were in a mess of some kind. That we couldn't obey them.

Well, why not? Why can't you do it? Why can't you love? Really, genuinely, completely. The answer is you are hung up. On the idea that you are. A separate ego. Cut off alone.

You really believe you're that? So let's test this ego out by trying to get it to do this and trying to get it to do that, all those things it's supposed to be capable of doing. You discover that you're not capable of doing them. And the reason you're not capable of doing them is that you as a separate individual don't exist.

You're a hallucination in that sense, and that's what has to be discovered. You can't find that out by just telling people that itself. They won't believe it.

You can only dissolve an illusion by getting people to act on it as if it were true and act on it consistently, persistently and thoroughly when it all falls apart. It doesn't work.

So in this way, Jesus is using a guru technique...where like a Zen master gives a koan. What is the sound of one hand?

Who are you authentically and genuinely before your father and mother see you? Show me. In other words, act perfectly sincerely. Without any social

conditioning, what your parents told you you were?

Nobody can do it. Why can't they do it? Because there's no authentic separate you.

When you find that out naturally, you know that what you really are is your one with the universe, like Jesus would say, I am the father are one. Before Abraham was I am. I am the way, the truth and the lie is what you really are.

Only then the whole Christian church managed to circumvent this and shut it up. It was too true to be good. And they said I only Jesus was the way, the truth and the life. Not you, baby. Not you. Not you.

But in a way, that's put such a burden on Western man. And it's taken just under two thousand years to see through it and the change is coming. Everybody is beginning to realize. What the whole trick was about. Jesus, you see, was an individual who got enlightened. Only he knew it was in the context of the Hebrew world, and he had the puzzle of how to express his state of consciousness in terms of his own time.

He couldn't very well come out and say directly, I've just discovered that I'm the Lord God. Not in a context of Jewish theology. Because of the political imagery.

If he said in the context of Jewish theology, I am the Lord God, that would have been like saying you all should bow down and worship me. When some people, including many of his disciples, caught on that he was indeed the Lord God, that was their response. They bowed down and worshiped him when he tried to turn them off that, saying, why do you call me good? There is none. Good God.

And why he insistently prevented them from the political involvement, which was that if he was truly the son of God, which means simply son of means, that the nature of, why didn't he lead the revolution against the Roman Empire? He threw all that aside as a temptation in exactly the same way as the Buddha threw aside all magical powers. And said don't. That's a sidetrack, that doesn't lead to understanding.

When the Buddha was walking along a stream Monday, there was a yogi, who suddenly started walking across the water, because of his miraculous powers and the Buddha said to him, hey, hey, hey, come back. There's a Ford just 50 yards up the river.

So in the same way, Jesus would not give signs of divine dominance to those who asked for them. But the church in later times, you see has put him on a pedestal, so that the whole doctrine is rendered ineffective. Just like that. And has tried and tried and tried and tried to insist that these commandments: You must love God. You must take no thought for the morrow. It's tried equivalently at that to say these are commands, and you ought to feel terribly guilty because you don't love God with all your heart. You do take thought for the morrow. You don't really trust in God.

For 2000 years, it's taken to realize that, maybe Jesus had a sense of humor. It was ironical. Was trying to get his students disciples to realize they were just as much incarnations of God as he was because he said. When? They Jews took up stones to stone him. This again in the gospel of St. John. They said many good works I have shown you. What do you do?

And they said, we don't stone you for a good work, but for blasphemy, because you being a man, make yourself God. And he replied, Is it not written in your law, quote, I have said you are God's. And he's quoting the 83rd psalm, it says, you are gods and the children of the most high. But you shall die like men.

He said if, I say I am a son of God, which means son of in Hebrew or in Arabic, it means of the nature of when you say we say you're a son of a bitch.

It means you're, you're bitchy.

So when they say Ebony killed, which means son of a dog, Ebony El Omar, son of a donkey or son of below the mean off the nature of so son of God means like son of a bitch. And in the opposite way, your divine.

It has nothing to do with paternity. It's simply an expression.

So when he said, if I say I am a son of God. And then the King James translation, it's all lost up by going. I am the son of God, which is not in the original Greek. Simply, I am a son of God. So you, only you can't realize this, that you're a son of God while you're still hooked up on the idea of legal righteousness, that you can, by the effort of your own separate conscious will do the divine act. You have to let go of yourself. You have to abandon that situation before you can be enthused. Transformed and inflamed with the divine spirit. So what he does throughout that whole Sermon on the Mount is to make a caricature of legal righteousness.

One of the funniest ways in which he did this was in the parable of the Pharisee and the publican. This is most ingenious. He tells a story, see of the Pharisee goes into the temple.

Go straight up to the front seat, stands up before the altar and says, Oh, God, I am not as other men are. I have paid my tithes regularly. I fulfill this obligation. I feel that that obligation and I'm feeling very good about it.

You know, just like the senior warden of the vestry in the Episcopal Church or a Knight of Columbus, then they says this publican, who a disreputable character creeps into the back of the synagogue, beats himself on the breast and says, God, be merciful to me as the.

I tell you that that man went down to his house justified rather than the Pharisee.

Now what happened? Everybody tries to imitate the public. Now the Pharisees creep into the back of the church, beat themselves on the breast and say, God, be merciful to me a sinner, because they think that's the way to do it.

Now you see telling that story has an effect. It has taken away the possibility of being the genuine publican as distinct from the phony Pharisee, because now the moment you are trying to be genuine, you're being phony.

And I don't know. I've never seen anybody except, I think Roddick whose, whose writing on this showed me the idea who saw through what a subtle

teacher Jesus was. But you have to read between the lines. You have to get the humor of it. You have to get all the plays that are going on in this. Because he is fully aware of the effect that his stories have on his audience.

Well, they didn't know what to do with it. They just had to get rid of it. First of all, the problem of the death of God. Theology. And secondly, the problem of whether the Jewish and Christian traditions can be in some way revived. Today, I am going to talk about the future of religion in the first session from a social point of view. And in this afternoon session from an individual point of view.

And what we are going to look at is a rather strange idea, which Frederick Spiegelberg, who has taught the history of religions at Stanford for many years, calls the religion of no-religion.

Curious thing that has many aspects to it. He wrote a very interesting book about it years ago, which has unfortunately sort of disappeared from the market.

I met Spiegelberg in 1936, originally as a refugee from Hitler in England.

And he had just come out with the idea of the religion of no religion. And it immediately struck a responsive chord in me because I was involved with the study of Zen which in a way is the religion of no religion. In Zen, for example. A famous story tells of one of the monks who was pestering his teacher as to how he was making progress in his study of Zen? And the teacher said, you're all right, but you have a trivial fault.

And what is that? He said you have too much as zen.

Well, the student said, don't you take it for granted that a person who is studying Zen would be interested in it, thinking about it, talking about it. And he said the teacher said no. It turns one's stomach.

So another monk who was standing by said, well, why does it? Why is this? He said, when it's like an ordinary, everyday conversation, it's much better. And so it has been a principle of Zen, throughout its whole history, that if somebody asks you a religious question, you give a secular answer. What is

the ultimate meaning of Buddhism? There's enough breeze in the sand to keep me cool. Or if somebody says. Why do you have a fan? The answer is. See, that's a secular question. So the answer is this fan will ascend to the 15th heaven and hit the nose of the presiding deity. The answer is sacred.

There is a Latin saying from the poet Lucretius. Tanto, really, Gil Berkowitz, father in Malone.

Too much religion is apt to encourage evil.

And so somehow, always I'm suspicious of religious people.

When somebody comes on with a great deal about idealism and what you ought to do and this and that.

I know he's a rascal, but when I meet someone who from the very beginning of our association admits that he's a rascal, I feel safer.

And that's the reason why when men are friendly with each other, I don't know about women because that's their private world and I'm not privy to it. That men who are fond of each other. Call each others bastards and all sorts of uncomplimentary names. Hey, you son of a bitch, how you doing? See?

That means that we recognize that we have in common something which in Hebrew theology is called the yetzer hara. This word in Hebrew means the wayward spirit, and it, according to Hebrew theology, when God created Adam in the beginning of time, he put in his heart the yet Saharan. And that was, in other words, a predisposition to be ornery, to be difficult, to be non-cooperative, to go off on his own in some way.

Christians don't admit this. They have no doctrine of the yetzer hara. Which is why Hebrews has more humor in religion than Christians do. There are some exceptions to this. For example, G.K. Chesterton, the great Catholic, had wonderful humor and some Catholics have this. But by and large, the Christian religion is serious about the Hebrew religion has always a slight twinkle to it.

If you see a play like the Fiddler on the Roof of the Hebrew can talk to God on kind of a man to man basis. But the Christian is always cowering fundamentally. Too big a load of guilt because of not admitting not realizing that it was God himself who was responsible for the way witness of human nature for the Sahara. I call the Sahara in English. Translation The element of irreducible rascality that is in us all.

And Young spoke of this a great deal when he called, when he addressed himself to the problem.

Of the assimilation of the evil in us. Once upon a time, Young met a man in whom he could find no human failing whatsoever. And this man seriously disturbed him. He said that I have at last met a genuine saint, and he was so worried that he thought that he should take his own life in order and reform himself. He said a few days later, I met the man's wife. Never again have I been subject to this temptation, not because his wife is the sort of person who said, well, you should try and live with my husband. That wasn't the idea at all.

It was that his wife contained the Saints shadow-side. He drove her to desperation. Because she had to reflect all the repressed things in her husband. So if you only saw through it. And never again was tempted to be a saint. I have a most amusing friend who lives with me here on this boat. The artist Joel Varda, and he is always in danger of being beguiled by saints. Someone comes around who is sure is a completely saintly person. And then suddenly there's a frightful disillusionment. It always turns out that that wasn't that way at all. So one has to be very suspicious of all pretensions to goodness. And the sanctity, because they do not recognize the yet, Sara, or the element of irreducible rascality that is in his all.

And this then is why. Preaching, [the] preached religion is a failure. The whole lesson of history is that preaching doesn't work. That preaching is really a form of moral violence. Of trying to change human conduct by saying 'Look, if you don't mend your ways, those are going to be a terrible thing happen.'

Either the police are going to catch you or hellfire, which is, of course, the celestial police force is going to catch you. Or a dreadful doom is going to

occur. You realize that before the Second World War, beginning with remark book all quiet on the Western Front, there was an enormous propaganda against war based on the horrors of war.

And in Japan, they had innumerable movies taken during the First World War, which was an unbelievably brutal Holocaust, where there was British and French generals really sacrificed men. Do you know that on the day that the armistice was declared and the victory was announced for the allied forces when the commanding officers ordered three cheers for His Majesty the King?

A great many of the men blew raspberries instead. It was an absolutely inhuman thing. Well, the Japanese had all these very uncensored photographs and movies, but this did not deter the Japanese from trying it themselves. Because horror, the doom, has a fascination for everybody. The same thing, kind of vertigo, which one gets looking over a precipice, the temptation to jump.

I know a young man. I did know him. He's dead. He had tried everything.

He had tried all possible changes of consciousness, all possible drugs and experiments. And finally, he did something to die. And I am sure I know why. He had to find out what death was about. It found out everything else. But he was completely fascinated, and so always when you paint the picture of doom. Say this is what's going to happen to you if you are simply asking for trouble. People will go to their tombs.

And so the preaching lesson is no good. The only way to change human behavior is to woo. Instead of preach. To make love, instead of threatening disaster. To point out how glorious something could be. And in some way to live it. And this is the real. If it has any meaning and if it has any guts, do it. The idea of make love, not war, would be, to live here and now, starting today, a magnificent life. And you don't need a great deal of money to do it. You need more imagination than money. I know innumerable people who've got lots and lots of money and were absolutely miserable because they have no imagination and they are full of fears because of their wealth. They always think someone's going to take it away and instead of, now, will I starve? Will I get sick? There's no protection against that. Who knows

when anything strikes, when any accident strikes. We have no real defense against that.

So from a social point of view, the important thing in religion is no longer preaching the possibility of doom, because nobody is threatened by doom, doom doesn't deter anyone because we know we're all doomed anyway. Why rub it in? We're all going to die.

And of course the Christians and the Islamic people. And to some extent, the Hindus and Buddhists tried to rub it in and say, you think death is the bad thing here. You just wait till when you are dead. Because we've got eons of time in which you can be tortured in our very special hells. Stop and consider that! Well, everybody read about us, it's like people think about the atom bomb.

Nobody is any more deterred by thinking about that. We're so used to it. And at the same time, it's inconceivable. Is there nothing anyone can do about it? There is no way of defending San Francisco against an atomic attack.

So therefore, everybody stops thinking about it, because it's insoluble.

So the terror thing does nothing, if anything at all, that we would say, OK, let's get it over with. So we don't have to dread this anymore, push the button. And end [it].

So what is necessary to do instead and not for any reason that there might be death and hell at last.

But to get up the nerve to live the joyous, good life today. Using imagination rather than money. And the difficulty for Jews and Christians in particular. Other people have difficulties, too. But the difficulty for them is their feeling that if you do presume to live the good life today, you will make the gods mad.

Years is like saying it, people, you may well laugh now.

But you just wait. What's going to happen to you.

So then we we have to see an enormous terror of pleasure. Of enjoying ourselves. Because when we enjoy ourselves, we feel guilty. We know I mean, if you eat a good dinner, there's an obscure feeling that somebody somewhere is not having a good day. Therefore, what right have you to enjoy your dinner when somebody's going hungry? Well, what are you going to do about that? If it just gives you a bad digestion, because you can't assimilate your own dinner that does no one any good. It doesn't do the hungry person any good. It doesn't do you any good.

Guilt, in other words, is an absolutely 100 percent destructive emotion.

And one of the real reasons why people don't do anything about the hungry, and something could be done about it. Is there guilt hangup? They'd rather be guilty than practical. It's perfectly possible to abolish starvation throughout the world. People would spend as much energy doing that as they would do, motivated by groundless fears, getting together to cooperate, to defend themselves against the unspeakable threat of yellow communism or something like that.

It is to me absolutely unbelievable, the wealth that is wasted and poured into projects of violence. When any practical person. Would have seen that for half the cost. You could have everybody.

In Asia, all the millions of Chinese, Vietnamese, Hindus living a nice, prosperous life for half the cost of what is taking to defend ourselves against the alleged menace.

But it is curious you see, that people will be united for reasons of terror. Not for reasons of love. And yet the union, the associations they form to defend themselves against an alleged terror are, in the end, always and invariably destructive. They solve nothing and build up massive historical hatreds.

So, if there is to be any sort of future for religion, it's one of the most obvious lessons of history that it must stop preaching, and do something else. I was a minister in the Episcopal Church, I was a university chaplain at Northwestern for five years. Finally, when I got through with it, the thing that embarrassed me most of all was preaching.

You see the problem of being a minister. You have your color turnaround. So is that once you set yourself up in that position, people look at you and say they start respecting you. Cops don't give you tickets. They give you a discount at the liquor store. Oh, you get all these funny little privileges. And why? Well, people would say you're living vicariously for us. The good life that we don't live. See?

Now, what does that mean? It means essentially this: that you don't screw around, that's all. And that's all.

Because if you take the practical test, what do the churches do socially today? They are not interested in anything. They are not interested in mysticism. They're not interested in God. They're not interested in abolishing poverty.

A few of them are: the Quakers. A few people get mad about war and really try to do something. But by and large, all the churches are doing is they are family and sexual regulation societies. And the truth of the matter is the test for what can a preacher get kicked out? For owning shares in an armaments corporation, General Dynamics, not on your life.

You can live, as I say, quoting the litany of the Church of England in a state of envy, hatred, malice and all uncharitable in hardness of heart and contempt of God's word and commandment and be a bishop in good standing. But the minute you sleep with your secretary, you're out. That's the test.

After all, even sleeping with somebody in a written irregular way is a loving thing to do. It's not a hateful thing to do. It's an action of affection. However, whatever rationalization you may bring forth to show that it shouldn't be done. Jesus certainly, regarded it as one of the minor sins and was far more angered by the money changers and that courts of the temple than he was about the woman taken in the sin of adultery. And yet this is magnified. This is the thing.

So this whole position, of a religion geared to repression.

Essentially, what it is Freud was right. But Freud didn't have the courage of his convictions. This is why Norman Browne's book, *Life A Life Against Death* is such a marvelous piece of work as here you'll get a very sophisticated classical scholar putting forward the preposterous notion that repression is a bad thing. And he's he's advocating it with all the the historical knowledge and literary expertise of a professor of his standing. [It's] very funny indeed.

Not in so far then, as our religion has been repressive. It has one thing to be said for it.

And the moment you understand this, the bubble is broken. The one thing that can be said for repression is the tighter the squeeze, the stronger the jet. And so in a way, sex has been made more exciting by making it forbidden. [But] that's the purpose.

In other words, in the way if we go back to the origins of Christianity in Rome, the civilization of Rome, where depending on your social level, you had different kinds of sex life. You if you could, if you were rich enough to attend the baths, you could have anything you wanted. Plenty of it. If you weren't rich enough to go to the bars, you had the circus. And in the circus, you could be entertained with any kind of sadism, masochism, weird bestiality and goings on.

Finally, everybody got sexually flaccid, and therefore the revolution of Christianity to stop all this with eventually a disgust for sex, was a biological process. However rationalized theologically, it was a biological process to restore sexual interest by making it forbidden. Only they didn't know it. But once you see that, you see, you can see what Christianity did, what its function was. But also you can see that it went too far. Instead of simply recreating interest in sex by making it forbidden, it warped all sorts of people's lives because they didn't have any sexual delight without guilt at all. And it created what is called lever sex which is a sadomasochistic women in black boots and all that kind of thing. And that's again, where love through its frustration turns into violence. And where orgasm is confused with pain.

There's always that possibility, you see, we, our getting our wires crossed. For example, many people who have got their wires crossed in their heads when they see something that excites sexual excitement. They feel the emotion or the sensation of disgust. Because they can't distinguish the nauseating feeling of I want to vomit. They can't clearly distinguish that from the orgiastic feeling of I want to convulse. They've got their wires crossed so they feel disgust. Then they should be feeling lost. That's what we call being mixed up.

So then, from a social point of view, it's it seems to me obvious that a social community must have a religion. And above all, a religion about which we all agree. There's no point in having a religion about which we don't agree. I mean, you know, you have the Baptist Church, the Episcopal Church, the Roman Catholic Church, the synagogue, Jehovah's Witnesses and all these people fighting with each other. And playing their various one-upmanship games with each other and the vast majority of the public who couldn't care less. Don't go anyway. So there is no religion today.

We've got all these survivals from the past and they fight with each other. To belong to a religion today is to my mind, not intellectually respectable. Because all you do when you join a church. You become a divisive force. This is where Krishnamurti is so clear and marvelous in his discussion of this problem. He shows again and again. He asks people, you want to believe in a God. You want to believe in a life beyond death. Why? Why really do you want to believe this? And he drums it in and drums it in. He says the reason is you want to protect yourself. And so long as you're trying to protect yourself, you have put up a shell between you and everything you define as not being you.

And for this reason, then all your beliefs are simply sources of strife and disharmony. And then he puts himself in a very odd position. Because you can't be a disciple of Krishnamurti. You can't join anything. He has no organization. And so he's surrounded with non-disciples.

And he gets terribly frustrated. Because he keeps seeing that the people who follow him and who come and listen to him, they just don't understand what he is trying to get across. The smart people would leave, you know, they would get the word and disappear. How fast can you get out? But they think

that there's still some special secret he's got up his sleeve. And if they hang around long enough, they'll get it. They won't. He said everything right from the start. So then, we cannot or that much as there is need for a religion in society. A religion which believes in something won't work. Because the moment you put out a belief. People start to argue. The moment you lay down a law, people start to argue.

Should it be this way? Should it be that way? Then there's this group that says we think it should be this, that you should eat meat. Then the other group says, no, you shouldn't eat meat. And so they start yammering at each other. So there is a possibility then, that there could be an entirely different basis of religion.

Let's think of some things that we agree about and don't argue about. There's a pretty close agreement among people living in the United States of whatever racial origin to speak the English language. Because no one enforces it. People don't go around saying you will be damned forever if you split an infinitive. Or if you use the word baluka instead of cup, nobody fights about that. Therefore, more or less, everybody agrees to talk English. It's convenient. Another thing that we don't fight much about is music. There are indeed some parties in music. There are people, the classical people that are the rock people, there are the jazz people or the barbershop quartet people.

But there's a pretty easy tolerance about this. We don't really take people to law. And to get the cops after them because they differ in musical tastes from us. Oh, well, well, well, there's plenty of room now music. Is something, therefore, about which people can unite. With no argument. What is there to argue about?

You just get with it and you swing.

So then this indicates to me that the only possibly a harmonious religion for mankind could be one which has in it no ideology. It would have no doctrines. So there would be nothing to argue about. In the principle of Zen is always, of course.

Instead of theorizing about what is the nature of the universe to point directly. And say if you want to understand, see into it directly. In other words, here I am talking anyway, look into the nature of life without thinking. And see for yourself that when you don't think, you don't make any division between yourself and the rest of the world.

You cannot point to the distinction between your five fingers. You can't lay your finger on the difference between your fingers, and in the same way, you cannot touch the difference between yourself and someone else. The difference is a concept. A propriety. A churlish propriety that. This is mine, this is yours. Yeah, yeah, yeah, yeah.

But when you stop the theorizing, you stop the thinking, then you don't divide. Then the world is what Buddhists call in its state of such-ness, just like that. So then it is for this reason that if there were to be a religion about which people could really unite, it would have to have no, no doctrine. No law. That is put in words. But people could unite. Around what we might at the moment call a nonsense religion.

I call it hun. Hun. Which is the religion that is starting. It has no hierarchy. Nobody's in charge. No offices. No organization. It has no doctrine. It doesn't say any words that mean anything. It has only music and ritual.

Because people like to get together and dance according to the Hindus, the whole universe is the dance of the Godhead. [So] join in. Get with it. And so this is what we need in American life in particular.

We don't have any joyous social assemblage.

Figure that we don't. You may occasionally go to a nightclub, at a price to dance on a small little tiny floor and really not much fun.

There is no dancing in the streets. Why it would be considered somehow subversive.

There is no pageantry except the occasional military pageantry on the Fourth of July. There is absolutely no occasion upon which anyone and everyone, as people who live on this geographical expression called the

United States. There is no occasion on which we get together for a kind of ritual of mutual agreement and love and so on. Doesn't exist.

That's what the rites of a religion were supposed to be. They were the orgies. We think now we misuse the word orgy. We think orgy means simply and all the sexual rules are suspended. Did you do anything you like? That's because we've made such a big repression out of sex. The real meaning of the orgy, it goes back to the idea that God created the world in six days and then took the seventh day off. That's the holiday, which means holy day. So we have the Sabbath for the Jews and the sun for the Christians. But what did they don't take a day off. They don't really celebrate. When I was a minister, I used to tell the students at Northwestern University.

Now I'm going to be a celebration of the Holy Communion. Seven o'clock makes Sunday. Eleven o'clock. I said, now look, I said celebration. And if you come here because you think you ought to come, we don't want you. Better stay in bed. Go for a swim or something else.

But if you want to join with us in this act of celestial woooopee, you're very welcome. I came right out and said that I see. So I had to leave the church.

This is this is the essential thing that we lack. We just don't have the social institution. And it's, we would find each other out. For example, let me tell you this story. There was once a retreat meeting for Christians of many different denominations for a discussion of how they could get together. Well, the first time they held this meeting, they talked and they all argued and it was a nothing came of it. So they decided to do a different the next way they would spend the first day of the conference in total silence, which they did.

And then the following meeting, they really got to understand each other because they associate it together in a non verbal, non discursive way to begin with. With no ideology, no theories.

And then they could at last see each other as living human beings and expressions of the divine nature, et cetera, et cetera, and know it. Instead of merely thinking.

So what we should do if we want to get together the various discordant religions and races and whatsoever, is suspend all discussions. And meet in a strictly physical, earthy way, and realize, that what is the very earthy what is the very physical is, after all, not different from not separate from the spiritual. This is the terrible hang up of Western men, this distinction of the physical and the spiritual. They are the same.

One might say that the spiritual is more concrete than matter.

Now, that's the kind of a tricky, paradoxical saying, and mystics are always putting out tricky, paradoxical things. But a paradox is a truth standing on its head to attract attention.

When you say, is it real, most people mean, is it hard? See, the sense, in other words, that reality is, is the concrete. But spirits like ghosts aren't very concrete and they move right through walls. So I've often wondered how a body can be moved by a spirit.

This is one of the great philosophical problems, but because the thickets that what is the very hard.

From one point of view. Why is matter hard? Because it's moving so fast. When you get an airplane propeller going, you can't put your finger through it. It resists you more solidly than a wall of granite. These student push against leaning on the wall of granite. You sure can't lean on an airplane propeller. [It would] knock you to bits.

But let's get that propeller going still faster. Much faster. Why? It doesn't even have time to catch you. It becomes a wall of granite. You can't get through it. So all matter is in such tremendously fast agitation. That when you lean on it, it's it's hard.

But that's because it's so alive, it's going so fast. So energy and matter. The more energy, the more matter. The more spirit, the more matter. They come from the same thing.

So the thing is that when we realize this when we stop our thoughts and stop our ideas and come to it without without thinking.

We have a basis for agreement. We will never agree. So long as we talk. That's why talking never leads to any conclusions.

People sit around, you know, you always remember how to spell committed to M's, two T's and two E's because they always discuss everything at least twice, and it's interminable.

Now, there are two ways out. You see of this dilemma. On the one hand, you can say, all right, the talking is over. Let's fight.

Because we are so frustrated and we are so sick of this argument that the only thing is to hit people.

Nobody ever suggested the other alternate. When talking comes to an end, let's make love. Might work.

In this morning's seminar, I was talking about the religion of no religion. From a social point of view, I said that this afternoon I would talk about it from an individual or personal point of view. And I was suggesting that society as a cohesive force needs a religion what we call today religions, act simply as divisive forces around which we play all kinds of one-upmanship games. And therefore, if there would be a religion which was socially univ instead of divisive.

It would have to be one without doctrines and without organization. In other words, one of the real problems of organized religion today is its commitment to real estate.

You may have read an article by Bishop Pike in Playboy. About taxing the churches. And I'm highly in favor of taxing the churches, even though I run a nonprofit organization.

Point is that our nonprofit organization is educational and if we don't own enormous blocks of real estate out of which we derive income by virtue of being a nonprofit organization or we own is what we need to operate with. So nobody wants to tax the church building, but they want to tax the hotels, the apartments, the stores, the enormous real estate, including 51 percent of the Stock of United Fruit owned by the Catholic Church and other organizations of a similar nature, which they can own tax free. And have

this as a separate income as distinct from that which is given by their regular contributors.

So as I as I said in this previous session, I've always wanted to preach a sermon at the laying of the foundation stone of a church, where I would take the text from the Bible if a man's son asked him bread, will he give him a stone?

The answer is yes. That's what you've got. It's no joke that when Peter acknowledged Jesus as the Christ. He said thou art Peter, which in Greek means stone. Petrus, Petrified. Now, Peter, and upon this rock, I will build my church. As I've explained, Jesus was a great utter of koans.

And this was one of the best cavos us in Hebrew, Peter means same thing. Rock. And the good disciple. Is always the rock upon which the church founders. The church, one foundation of. You know, it's always the good disciple who ruins the teaching. Because he is a follower. Because he doesn't have it in himself. He therefore follows somebody else.

And anyone, therefore, who is a really effective guru always separates his students from himself. And sets them free, so that you don't have to say, oh, I am a follower of this man and that man, and the other thing. No, go free. Don't founder upon the rock.

And therefore, this is the case of the religion of no-religion. There is a saying in Latin about religion. Christianity, of course, revolves around the symbolism of the cross. And in Latin, it is said Crooks Medi Chino Mundi, the cross, the medicine of the world. Now, never make your medicine a diet.

One shot is enough. And that's goes not only for religion but for LSD, for all these things, don't make it a diet.

Once you've I don't say literally one time, but enough of it to see, and that's it. If after that you keep coming back, it means you never got the point. So in Zen, there is the saying, To know your original mind, to understand your essential nature, that is the great disease of our school.

In other words, to have some thing, that is religion and that is special and that it is over and above everyday experience, and to insist on that, is a disease. It means you're playing games.

[You're] wanting to one up yourself and everybody else by saying, well, we have an in on something here that you don't have. We know what it's really all about. And you outsiders. Well, you may be all right. You may be Muslims, you may be Hasidic Jews, you may be philosophers or Christian scientists, and therefore, as a result of that, you have a partial glimpse of the truth.

But we, of course, is the real insiders have the whole thing.

Or put down that is. And everybody does it.

So what are we to do? What are what what a predicament? Supposing we say now our school here says that you don't have to do all that. You don't have to play one-upmanship. You don't have to have anything special.

Last time almost I met Suzuki. Not San Francisco's Suzuki, but Japan's Suzuki He signed his name Bujimin, which means a man who is nothing special. Now, what was Suzuki doing? Was he making a special case as himself, as a man who was nothing special? This phrase buji in Japanese or Wu Shu in Chinese means no business, no fuss, no special claim, no nothing important.

And this is used as a characteristic flavor of a person who is experienced in Zen.

But then all the Zen people who have learned to be nothing special, to be natural, to constitute themselves a particular class of one upping everybody else. Well, they do that.

Now, what if they didn't do it? Nobody would know they were around. I think the best psychotherapist I know is a man who teaches photography. Nobody knows he's a psychotherapist, and he has saved the sanity in the lives of seriously disturbed people that I've known just by teaching them how to take pictures.

No claim, to be anything special. Marvelous. But I'm not going to give his name out because that would spoil the whole show.

Now, here is the predicament of what is called in Buddhism, the Bodhisattva. They make a distinction in Buddhist philosophy between a body staffer and a project, a Buddha. Pratyekabuddha means a private Buddha. That is to say, somebody who gets enlightenment, who sees through all the markers of life, all the illusions, who attains the final awakening. And then he sits down and enjoys it. The bodhisattva feels, however, that he can't sit down and enjoy it unless everybody else is in on it. And so he comes back into the world looking like an ordinary, everyday person. And through doing this helps everybody else to become enlightened. But how is he to get it across? Without making a little difference, and saying, well, listen to it this way in the form of a Zen story.

A man came to become a monk at a Zen monastery and the master said to him. Where do you come from?

And he said gave the name of his hometown a village. He said, what did you then do?

He said, I was a cowherd. How did you take care of the cows? He said in the morning I took them out into the fields and in the night I restored them to the pen. And the master said, splendid is your ignorance. In other words, here is the perfectly ordinary human being doing his stuff.

Now in a certain way, the highest enlightened human being is exactly like that, but there is some funny kind of a difference. And the whole quality of this difference is that it mustn't look too different. [Here's] another Zen poem says it is like the salt and water and the glue in ink.

Chinese ink as glue in it to hold this stick together. But the salt and water and the glue in ink, they're invisible. Yet you can taste the salt and water. And the transparent glue holds the ink stick together. So there's some kind of a difference between ordinary, everyday life with its anxieties, attachments and problems, and something that looks exactly like ordinary, everyday life. But doesn't have the anxieties.

Let me press that just one step further, if you will allow me. You are still anxious if you're anxious about being anxious. See? You say, well, I feel a guilty every time I'm anxious, as I really ought to be spiritually evolved enough not to have any further anxieties. And so at last I find myself with a neurotic problem. So if you find with the great masters that I've known in Zen. They don't have that hang up at all. They're not afraid to admit that they have toothaches and I have to go to the dentist. No. It's a nuisance that. Sometimes get hot and bothered and lose their tempers and are just human like everybody else.

And so you could very well say. You might almost be justified in saying to these masters, you're putting over a big hoax on us all

You are just like everybody else and you know it. And yet in another way, you're claiming to be special. Did you have some special inside information so that you're not a man of no special at all?

Bujimin. You're just a human beings, can't everybody else, although. In fact, you are a confidence man, that trickster. And the funny thing about this is that the word that is used in Buddhist philosophy for the method of enlightening people. Which is called Upaya. It means trickery.

When that word is used in politics in the political context empire, which means the skill of the teacher in Buddhism means trickery in politics, and the Buddhists laugh back at themselves and say, we are just tricksters, we are people who... Rinzai, the great Chinese master of Zen said My teaching is like using a yellow leaf to stop a child crying for gold, for an empty fist.

The empty fist trick. See, is you suddenly say to a child, what have I got here?

See, see, see? But it behind your back. And the more excited the child gets to find out what is in that fist. And after a long wrestle.

There's nothing in. Or when a child says, I want some gold.

You give it a yellow leaf.

So in the same way. The Zen teacher is saying, there is really nothing in Zen to be understood. The secret is the secret of life is that there is no secret.

Only you think there has to be a secret, and since you've insisted on the idea that I as a teacher have some secret.

OK, let's try the closed fist technique with you in every conceivable way. When you penetrate this closed fist and you find out there's nothing in it, then the teacher will bring on you another closed fist in a different form.

There is always a new koan following every other koan.

And you think, oh, maybe something that I ought to get through to. There's some special thing and when you suddenly find out that.

The whole trick is that there isn't anything to cling to. That is to say life is falling apart. It is a totally insecure situation. We'll accept it, for heaven's sakes, accept it and get with it. See, that's only the beginning of Zen study. Then they come up with something else. And you think, well, if I really honestly accepted my insecurity and had no hang ups at all, I would be capable of all sorts of miraculous performances.

Somebody leads you on to the idea that then you would acquire these psychic powers and be able to do these all super normal things. And you're intrigued. Maybe if I really understood. I would be as God. And so you hang around the master, who keeps fooling you.

Until in the end, you discover you don't need any miraculous powers. You don't need to be able to change water into wine. You don't need to be able to change lead into gold, because what you have is what you really want. Always. And if you want to put up an objection and say, I don't want it that way. That's because you want to object. You know, get with yourself. This is always the teaching and all these things that seem to hang out, some goal. Something you should pursue. Something you should be. Over and above what you are here and now at this moment. They're all tricks.

And the object of the tricks is to get you to see that here and now as you are. This moment is fine. Only, if you make that an objective. And they say, well, we here accept ourselves as we are here and now at this moment and all you common followers who don't really understand that you're kind of on the out. So you still haven't got it.

So then this is this is why always in the history of religion, there is the theme of the religion of being natural the religion of no religion. You don't need an idol. Because there is the living God.

It's only one step from that to say, as the Quakers say to the Catholics, 'Why do you have a sacrament?'

Why should the sacrament of the altar in this special service that you have in the mass? Be anything special? If you really understood Christianity, every meal would be the mass.

The Catholics turned back for the Quakers and say, yeah, that may be true, but when everybody is somebody that no one's anybody.

If you don't have a special meal that is the special mass, then everybody will forget that there was anything at all. In other words, they will come to a view of life where nothing is sacred.

There's that line in one of Bob Dylan's songs. It's pretty obvious that nothing around here is particularly sacred, and so the people who want to say no, no, no, no, no. Now, wait a minute. There must be something special, must be something sacred. We must set off a certain part of life. Hey, come off it now. We can't make everything common property. I am. Must be something special. Here. See? Specially guarded. You keep out. Well, what are you doing? Why? Obviously, by saying there's something special, something sacred. You keep out of this. That's your identity. That's your ego.

Then there are other people who come along and say, to hell with everything sacred. Oh, you're all just a bunch of crooks. That's another false technique. This is the Democratic parody of mysticism. Everybody is equally inferior. You're all a bunch of bastards fundamentally, you haven't

got anything you want to know. You do. You don't need any privacy. That's the life you live when you're in jail, when you're in a mental hospital or in the army. Where everybody is equally a shit.

But you see, that misses the point just as much in that direction as holding something sacred misses it in the other direction.

How can you be natural? See either, either of those two ways are unnatural. So the challenge which the teacher of Zen gives you is he's saying to you, OK. Be natural.

Now, so long as you feel that you have to prove that you're natural, he can defeat you. Because he can catch you off guard all the time. It's only when you feel that you don't have to prove that you're natural. That you can get by his tricks. Only. He's got this one underlying you. That you can say well I don't have to prove anything. And he says, well, what are you doing around here anyway? I mean, why? Why are you coming to see me? And then you're embarrassed you see. You're still out after something as if there was something to be. Something to awry that more than what you are. At this moment and what you are at this moment is, of course, the perfect expression of the universe in exactly the same way that the tree is or a fish's or a mountain or a star or anything else. Only it's because people don't believe this, that they do all their excessive things, that they have to have extra power, extra possessions, extra this, that and the other, they want to be loved more than anybody else because they don't know, don't realize that as you are at this moment, you're the complete works. And they don't want to know it, because the whole game is pretending you're not.

Hide and seek. So you're all right. Even when you're not all right. You see, you can think this in circles. You can go round and round with this with this game indefinitely and hang yourself up and hang everybody else up.

The meaning then is, that so long as we're dealing with ideas and with words and with everything we can say in words about realizing buddhahood and liberation. We never get there. Because there's always games within games, within games within games. So it's only as you get beyond words that the thing is clear. But so long as I say that in words, I'm designating a special class of people who get beyond words, when you're beyond words,

you're not in a special class of people. You are only so long as we're talking about it.

So then here's the problem that, for example, when people go and practice yoga or Zen or whatever, and they define themselves as such and such a group meeting at such and such a place, and they do this, that's the verbal side of the thing. And so long as that is going on, it must always seem that they are one upping other people were not in this in group. But on the other hand, the moment they are actually doing the yoga or the Zen meditation, they are not one-upping anyone. Because they're not they're not verbalizing. It is through verbalizing, through measuring, and so on, that you see that you dissect life and break it down into its separate parts and say this part is better than that. But when you're not doing that, it isn't happening. If somebody says, look, it's like supposing I say to you, everything in this world is relative.

You only know to be, in relation to not to be. You only know what it means to move in relation to stillness. You only know time, the measure of change in relation to a constant. So on. Then somebody comes and says to me, well, if you say everything is relative, then you are an absolute relativist.

I say, because so long as you think about it, you always go around in circles. Cos you can't conceive the idea of the relative without the idea of the absolute. But when you actually do the thing. And you don't verbalize it. That's a different situation.

And the people who are not verbalizing, who do indeed realize the suchness, the Buddha nature in all things. All those people. Can be talked about by others. And they can say, well, are you a special class? Are you a special in group, aren't you really making claims to something and they can't answer and say, no, we are not? Because if they say no, we are not. They say, well, then you're putting your class in the people who are on the class of non hypocrites and you are one upping everybody else who is a hypocrite by saying you're not a hypocrite.

So long as you talk, say this. This game goes on and on and on and on.

But if you genuinely are in the state where you don't think. And I must qualify this for anybody who came in on this discussion late. When I say you don't think, I don't mean that I'm an anti-intellectual. That there is a way of living your life all the time without ever thinking. It says the point is, rather, that it too get out of the game business of thinking.

Thinking you have to spend some of your time not thinking just in the same way as you have to spend some of your time not talking if you're going to listen to what other people have to say.

To have something to think about, you must sometimes not think. That is to say, you experience directly without symbolizing the experiences with words. In other words, to pick this up and not say to yourself, it's a beer can or it has beer in it. But with your hands and your eyes.

See? You know this directly. Whatever that is. And you don't make any comment about it. You can make a comment later. But if you're commenting all the time, you never in relation to it.

So then. I'm trying to say what you cannot say. Because so long as you talk about the class of people who know how to suspend thinking, how to relate to the world directly, how therefore to transcend the division between I and thou. Ego and universe. So long as you're talking about it, you always make those people a special class.

And as it were. Project upon them that they are playing the special game. I am holier than you are.

And that's religion.

The religion, we call it in the West, we say, oh, he yes, he has a religion, but it's a Sunday only religion.

He does this special activity goes and makes weird noises in a church on Sunday and listens to all sorts of sermons and loves his neighbor in the church, but when he gets back to work. His irreligious. It's just in a watertight compartment. So we know, don't we, that what his religion is

supposed to be identical with everyday life. But we don't get this across because we think of religion in a very narrow way as morality.

We say, all right. If this businessman is so religious that he never makes dirty deals, he never cheats anyone. He is always on the level with say he is truly practicing his religion. He is a genuine Christian. But this is only a fragment of it. It isn't a question of how you deal with the morals of business. What is the religious way of brushing your teeth? With 10 strokes on each position, you might say this is the devoted, determined way of brushing your teeth. But then I say this is still in the realm of moralism. Let's get beyond that. We've got to get beyond this point. All right.

There's a saying whatsoever thy hand find us to do do it with all my might. I went to a school in England, the motto of which was I gave them I use, which means in Latin, when you do it, do it. And this is either an awful platitude. Whatever worth doing is worth doing well. That's a terrible polarity. All the Protestant ethic is in that. But there's another sense to it.

Now, we can't say what it is. There's this other sense to argem arges. Which is not the moralistic sense, not the preacher's sense, not what you would say as a father to a boy or a mother to a daughter. You know, do your bit. A good scout. There is another sense to it and I cannot tell you what that other sense is. Until I stopped off. And then you can see the act that has done.

Without somebody commenting on it and saying this is the right way to do it, this is the wrong way to do it. This is really doing it. This is not really doing it. Because when you don't, you get into the nonverbal world. There is no difference between the act and the doer. There is no difference between the good and the bad.

There's no difference between, in other words, the secular and the sacred, the religious and non-religious. Once you step over the border. And that's why the entrance to this is, in Zen parlance, called the no-gate barrier, or the gate. This gate. Because it looks like a gate, a barrier. Something to be attained. Some entrance to a special in group, so long as you're standing outside it. But the moment you cross the border, the gate vanishes. So does the wall. And you see everybody at all. Everybody in the world as manifestations of the Buddha nature, or we'd say in western terms of the

divine power. And you see they're all just behaving marvelously in their ignorance. Splendid is your ignorance. So like Kabir, when he was an old man, he was a great Hindu, Buddhist, Mohammed and Mystic all rolled into one poet. He would look around and say, to whom shall I preach? Because he saw the beloved the divine face wherever he looked. He had no recommendations to make.

And so in the same way you see everyone as doing it in the same way as the pattern of the flag flapping in the wind out there is doing it. The waves are doing. Fronds of the trees are doing it.

What's so special about us that we aren't? Only, of course, if you want to make a difference.

Time and the Future

So this is the first of a series of four weekends devoted to the subject of the future. And each session is pretty much each weekend is pretty much self-contained. There's a certain continuity but it's moving towards the center point from various different points on a circumference. And in the first weekend this weekend, we are considering the subject of time and the whole concept of the future. And the point of departure that I would like to suggest to you is that time is a social institution and not a physical reality. There is, in other words, no such thing as time in the natural world the world of stars. And waters and mountains and clouds and living organism. There is such a thing as rhythm, rhythm of tides, the rhythm of biological processes. But time as such as a social institution. In the same way that language is, that number is. That concepts are. And all measurements; inches, meters, lines of latitude and longitude, all those things are social institutions all conventions the word Convention from the Latin convenere, to come together. To agree about something. To hold a convention. And that's of course, in its deteriorated sense, and we said something is clearly conventional That is to say you, needn't take it seriously.

Now of course, are we going to take time seriously that is the big question and it depends what you mean. If you don't understand the time is a convention of course you take it seriously. And you're driven by time. Time

is Money. Time is of the essence. And we do don't we live in a culture or a complex of cultures in the Western world where we are literally driven by time. If you read a book like Jules Henry's marvelous work Culture Against Man. He documents in the most extraordinary way to what extent this particular culture is driven. So that, even the psychologists have altered. The old fashioned word instincts, and now they call them drives. Because there's this feeling you've got to make that deadline is something that you've got to get to, and people feel driven even when. Something's going to happen you've got an appointment coming up and some people find that in a strange way unsettling they're so eager to make this thing also anxious about it that in-between time they can't do anything else they're incapacitated until it happens, until the blessed event or whatever occurs. That in the natural physical world, there is resuming there is motion. And time then obviously is a way of measuring motion. By comparing motion with some sort of constant. Now the constant in the question of time is a sec. Knocked out in three hundred sixty or sixty degrees. And that is time. We cause a and a pointer to revolve around that circle at a regular speed and that gives us a constant. With which we compare all kinds of motions and rhythms. And so, the clock is just like a ruler, and is as abstract as a ruler. And must be taken, just for that which means in a way not seriously using. That doesn't mean of course that you say Well from now on we're going to melt down all trucks. And use them for something else. Because, conventions, social institutions, are very valuable. Corresponding to the watch there is the compass. And that also is a circle. Divided four always north south east and west. The Buddhist speak of ten directions because they have not only the eight points of the compass but they add to that about them below. And in their mythology they have Guardian Kings whose duty it is to God the ten directions and you see them at the entrances to temples and places like that all assists an aspect of the cosmic traffic cops. Who are that fear Sanaa that certain about it all because it is after all important that I can meet you at four o'clock in the afternoon at the corner of forty second Street and Fifth Avenue. As if we couldn't make that sort of agreement that sort of convention we couldn't convene.

And in so far as it is important to us to meet, we require these sorts of compass is and time is in the vast emptiness of the cosmos. But we must recognize that these things are as it were written across vast emptiness. The

ground of being is to live coals God has nothing in it where you can stand you can't catch hold of it you can't describe it but you can imagine all sorts of things in it indeed perhaps the whole physical universe is such an imagination. That don't take it for being ultimately real. There are of course sort of gradations of reality. One could say the truck the lines of latitude and longitude and with some things like that abstractions have a rather flimsy kind of reality. Next in order will come of course what we call ordinarily the physical world we say well that's material that matters and so it has a little hard a kind of reality. And that most people stop that they think there's nothing at a deeper level than that. And that simply because of the limitations of man's a to of consciousness of his conscious attention. Conscious attention is so worked out that it tends to ignore all constants. In other words. When you move from the Middle West and come and live in California, at first when you get here you think this is fantastic they think it is so beautiful and so lush, and so on and you stay here after a while and in a few years you stop taking the place for granted, because it's a constant stimulation of consciousness. Also for example, when you're listening to recorded music, there is always a kind of electronic hum. But we screen that out and ignore it. And so it becomes unconscious. Well so any similar way there is what you might call a continuum, a something or other, in which all because of who phenomena exist. And you ignore it. Unless in some way or other you can make it hum. And so various practices like performing yoga exercises or zen meditations, or certain kinds of chemicals can cause your entire sensorium to hum and this draws your attention to the ground the background of everything that you are perceiving which you ordinarily ignore. I think there is going around an entirely new religion called hum. And Hum has no organization no hierarchy, no doctrines, only music and ritual. And just hum. If anybody asks What's it all about is a well come see. Come and see, come along. That would be kind of nice to have something like that I don't know whether it exists or not but it ought.

At any rate the the continuum in which everything occurs, is of course basically what you are. Only because we get absorbed in details we do we forget all about it. Deep down. Within yourself you know the area well indeed that you are that. And that what we call consciousness and unconsciousness coming and going life and death are changing mode. It is within this whatever it is we are. And your identity is come and go. Your

forms your bodies your this your that it's all oscillating like everything isolates it wouldn't harm if it didn't. And so, though we are each one of us, all this cosmos and all this universe it's ground. We don't know it. Because we can't make it an item of knowledge a particular. And we think the only kind of knowledge there is is knowledge of particulars. A logical positivist will argue this to the death. And say well because your York thing that is common to all makes no difference it's true in a mathematical equation you cancel out as irrelevant terms that are equivalent on both sides of the equation. You remove them as redundant. But you know, these things aren't redundant. While it's is perfectly true that a statement about the ground of being is from the standpoint of formal logic quite meaningless. It makes an enormous difference to the way it doesn't actually feels and behaves whether he's aware of the ground of being on not the ground of being in the logical proposition. It enters a human life is an extremely vivid experience. And the difference between a person who sees that a person who doesn't is quite startling. They behave differently. It may not be the way you want them to behave that show different. And so it's like being in love. It's quite unreasonable to be in love, but when you're in love you're entirely changed then you behave differently, even though you may be crazy.

So, certain crazy things like being in love or like being aware of the ground being are immense factors in human life even though from the standpoint of academic philosophy and the kind of the scientists Santa wants a scientific I want to say scientistismic make a phony science and they don't they should be masters of scholarly attention. Nevertheless they're tremendously important. So, within this enormous so-called void call it void not because it's nothing in the literal sense but because you can't pin it down. But you can experience. And you when you do experience it you wonder why the devil you didn't see it all along there's a bizarre because nothing is more obvious than this. So within that void you see, we set up these two great circles the time circle and the space circle. And we notch them all of a round and we use these concepts in which are really in our heads as constants by which we regulate all sorts of events.

Now then, when you lose sight of the conventionality of these things because you are absorbed in details and have become unconscious of the totality, you begin to invest emotions in them. You may for example go to a

game of some kind, football, basketball or chess you know and you watch the game and you know it's only a game, is that, was what you understood when you went in but as it progresses and you become more absorbed in the back and forth of the game your emotions begin to be affected, and you start cheering for one side or getting want to take the part of the underdog. Something of this kind. And that's what happened to us when we were bomb. We got into a gaming room. And we we it was only a game but we begin to take it all terribly seriously. And each one of us is given a part in the game. And people tell us who we are we're from babyhood up say this is the way you are it's not like you to do a thing like that see your mother says because she is that this is an identity for you and this identity is something you have to make because you've got to remember something you're going to be someone. I mean this if. It was in the beginning I suppose really we're nobody. But that simply means nobody.

But we are persuaded all along and also life we begin to build up this precious identity which is our part in the game like your play Black I'm playing white. I'm diamonds, you're clubs or whatever it is. And so we get a tremendous emotional investment in this identity. And its fortunes on a kind of game you know like the old fashioned snakes and ladders when you land on a certain square you have to go back and so on all this, all sorts of this. And then finally we discover that the props that we've all put together constitute this identity wearing out. And we're not able to keep up this identity. And gradually we get old and. We begin to fail and then there's all this thought that well this is too bad it's all over because we've got them both over the thinking that that what was really going on. So, one of the greatest hoaxes in this whole thing is the future. I don't watch we're giving a whole series of seminars on the future but it's important to understand thoroughly the nature of hoaxes. Now, when I'm talking in this sort of way don't take me too seriously. I, in all my writing and lecturing, I exaggerate. Because if I don't exaggerate no one will listen. Because all philosophers who take a moderate tone of voice and say on the one hand this and on the other hand that and after all we should realize that all parts of you should be taken into consideration one reveres them for their calmness and their family but when you listen to it all how they stimulated you have they given you a new idea no. Two to teach in any way you have to make outrageous statements, but with a warning to your listeners that you're only doing this

for effect to get a point across to provoke thought. Because with my position as a philosopher is not a verbal position. My position is a philosopher whose experience will not exist until experience. That is to say, the experience of the ground. And I will take any side. We've all kinds of patterns but the whole point of doing that is by showing you how various opinions cancel each other out you can come to the no-opinion, to the ground underneath, and experience that which is as good if not better than falling in love.

So, but it's important that you see to understand that to some extent you see this is a hoax. That we believe. That future is what we are responsible for what was causing it. And that we say other thing which we don't think is any good it has no future. Now when you contrast that which is absolute common sense to most people living in the Western world. It's the future we've got to worry about. Contrast that with the Indian Hindu Buddhist idea of time. Where as where in which they feel that in the course of time. Everything falls apart. And that therefore there is nothing to be hoped from hoped for from the future. Now they would say to us isn't that obvious to you because after all don't you see that all going isms all entities whatsoever fall apart in the end some go fast some go slow. What do you mean, the future. Individuals all fall apart, eventually whole species fall apart. Something else comes true but for each thing that you can consider as an entity as an individual as a species. Its future is death. And then they say to us Furthermore you think of time as a progress as something like a stairway or an ascending letter that goes on and on and up and up maybe it has bugs in it were the case because dumb but it's like a graph you know of a successful business cooperation of like this say that's how they want their graph to look they view says this is your absurd the very thing you use for telling time is wrong. Don't you see, it just goes round. And so, look at the stars isn't everything going round on the galaxies going round it is going round and round it isn't going anywhere except around. And we say to them. Oh you poor Hindus. The trouble with you is you don't have enough technology. You have a terrible economy most of you are starving you think life is just terrible and therefore you have a pessimistic view of it. Well that makes them laugh themselves silly. They have a pessimistic view. Well, because mine is we're not as a mystic because we know that the whole thing is a hoax we know who we really are and you poor Westerners you

know bugger you you rush around with long noses you have deep set eyes and you go poking your noses into everything. You send out missionaries because you are so uncertain of your own opinions that you have to convert everyone else to agree with you. And you're quite mad. But you live for the future. And poor suckers. All you do cost by living for the future is you create a great deal of trouble because you think you're involved in a process called history. Now here comes another very important matter, history. I've had the most amusing discussions with Orientals. And they have really no sense of history at all. For them, life goes around and one year instead of pretty much the same as the next year. There are reasons that their rhythms and rulers and revolutions and this and that but they don't they don't regard it as as having some important progression. They have chronicles, at least the Chinese kept Chronicles but keeping Chronicles is like keeping a diary or a day book it's a very different thing from writing history where you're trying to make out some sort of sense in the course of events it was just keep the records. And the Hindus didn't even bother to keep chronicles probably. So it's it practically impossible to establish the date of a document from India, unless it was quite recent because every time they really recited it or recall that they had update the names because the king in it was an archetype a king and every king is an example of the archetype looking about him a story is told all these Hindu scriptures like a fairy tales Once upon a time who knows when a million years ago twenty years ago it's all the say because the cost of events and the rhythm is psychic.

So, we on the other hand. From St Augustan, was the real trouble maker. I don't really I'm not absolutely sure that the Hebrews had a linear theory of time. It's questionable. They might have had, because they did look forward to the coming of the Messiah because the day of the law had to they had this apocalyptic idea that they were in such a wretched situation that there was going to come a day when the divine power would intervene in human events and set everything to right and to be ahead knocking session called The Last Judgment, and everybody would be put in a lot of. Well what sent Augustan did with that you see. He rejected the psychic theory of time. Not quite so much on account of the day of the Lord. Coming at the end of time but on account of the Incarnation. He was somehow fixed on the idea that when Jesus was crucified that was the one full perfect sufficient sacrifice for the sins of the whole world. It happened once and if time is cyclic he

argued, this would have to happen again and again and again and that couldn't be that's all there is only one time one progression of time from the creation of the world through its redemption by the sacrifice of the cross and all. On to the final judgment then time would cease and we should be in eternity. And from this, theologians increasing it again think about the historicity of Jesus. And to emphasize that it was a historical fact and that history as worked out in the Bible stories from the creation through the fall to the doings of non Abraham and the captivity of the Israelites in Egypt and the giving of the fall by Moses All this was worked out as being the mighty acts of God which revealed the divine passion for the cause of human events. And the funny thing is, that although many many historians living today are not Christians and not Jews and don't believe in anything that they still think of history as a significant momentum towards progress, something that children's children's children's children are going to get we all suffered and live for then just go to and has this good on the end of the line. Now, we really don't know, and can't talk about progress. Unless we know where we're going. And making progress towards that desired object. But most people involved in what they call progress haven't the faintest idea where they're going. I have found increasingly that businessmen and military men are astoundingly impractical. They just don't know what they want. They think they know. I had a long discussion with Air Force strategic people They asked me and some other philosophers. What is your basis for moral behavior. So I pulled their legs and said they says my moral behavior is pure selfishness. And very practical self. Said Of course. I am talking like this because you're all hard headed people I'm not going to give you any sentimentality and stupid stuff about love and so on because you say sorry ality you're military man and you have to see that the United States of America as a collective selfishness is properly looked after. Now I said of course, in my own personal life when I'm selfish I'm not too crude about it I don't run around hitting people over the head and in the gimme gimme gimme I pretend like I'm a public servant that I'm out for the best interests and all I saw the thing that's come up. So that that's not going to trouble about this is that to be effectively selfish, you've got out of the two questions the first is what do you want? And the second is what do you mean by yourself? Well you know that this pulls the carpet out from under everything else what do I want. Well if I answer this kind of a sensible human being what do I want in life. The really important thing I've had

from the beginning, which is that I'm an incarnation of the ground of being like everybody else. And that's the most important thing because you can't get rid of that. The next thing is, of course I want food. I want friendship. Companions. Love. And General singing and dancing and so on. And these are more or less attainable material realities. But then I look at my very wealthy friends who ought to be able to have all these things especially those who are extremely active in business and I realize they don't have them. They're the most miserable people.

Here, you're a great executive of a very very important corporation. Begin with you are drowned in paper. You do nothing but scam paper and make decisions about paper all day you may be the director of an oil company you never get within sight of oil except when you drive your car mostly you are surrounded with statistics about oil finances about oil and you are smothered in this and you have to spend almost all day in a wretched office building in a place like New York. You dress like a funeral director. You... I've had lunch or the part of directors of a very important oil company that will shall be nameless, and it's like eating in a college cafeteria. The food was just I mean it was good food that was extremely ordinary, but you would expect these great millionaires to be having caviar and the glorious fish in Aspen, and wines and beautiful waitresses serving them and to be lounging at tables like Romans knows.

And then if you've read an article in Look this week by Marshall McLuhan and George Lemmon on the sex, the future of sex, and asked brings up some information. That what they call the narrow gauge specialized male. That is the sort of guy who gets out there and sells you know and he he mustn't have any feelings. Because that would be our Mamet anything except think of a kind of rough. And that so many of these men are like that, and it says that that role playing of that kind of male gives you arses and all kinds of complaints and is more deadly than facing the bullets in Vietnam. And they all die before their wives. Because they are engaged in the pursuit of a completely fatuous go. This fatuous goal is the future. And it is symbolized, above all, by money. They make lots of it and have it much more than they can even think about and they have no idea what to do with it except make more except invest it in bigger and bigger units of something. And while they're harassed about that they're wondering about

the antitrust boys Internal Revenue their competitors and all these ghouls who are involved in the game. They lie awake nights. They can't go home and throw the whole thing off they have to get completely boozed. That's one way out or tranquilized which is another way out or something or other. In order to take it, and they call themselves realists. You see their utterly unrelated to the physical universe. As a part of cos because of the education they've received you see if you go to an ordinary school such as we've had since they. Know the early nineteenth century. You discover that your education is purely cerebral. You are prepared to be an executive, a bureaucrat. Some kind of clerk. You know the word clerk, originally means clever. Because the terrorists were the only people who were clever the word clever cleric, is all the same word originally. They were the literate people. Therefore they did all the cooking and the records. They got away with and they convinced us that the records and the book Eating his mind part and then the actual goods being transacted. So that now people you see a much happier with money than with wealth I think they are trying to persuade themselves that they are, when they bought a lemon. So this guy who thinks he works for the future of this great captain of industry. Condemns himself mostly to misery there are a few exceptions naturally as I said I always exaggerate everything I know a few important business men who have some conception of how to enjoy themselves. But I was amused to meet a young one little while ago who had created one big corporation which had been bought up by another of the biggest shows going today he was a member of the body of directors and he said now and thirty five years ago I made an awful lot of money and I'm going to drop out. So we took off for India. Well, then that's going to look at we've had a little look at business let's go and look at the the military people. And they don't know what they want either. First of all, they invented a weapon, which was completely insane because it isn't a weapon. It's simply a contrivance for planetary suicide. And our weapon is a very specific thing. Now, a sword as a weapon and notice it's pointed in shop and directional. Because then you learn first thing you have to know about using a sword is where to put it where to point it. And so it is selective. But things like biological warfare or isn't gas and nuclear bombs are not selected and you don't know when they're going to blow back on which way they're going what the consequences of them are the only thing you can do with is you can pile them up and start playing lighting matches in the powder magazine this is a

very dangerous game people might play with each other. Where with her sitting in a powder magazine, and I dare you to drop that thing he. Ha ha ha you know, we'll blow ourselves both up if you don't do what I want. And this is a strategy it's madness. Beyond that, they don't they they they don't have any objective it would be understandable if we were going to Vietnam. The cause of all those gorgeous little oriental girls we were going to capture the whole lot and bring them back. But we're not. We are out to destroy something called communists. And nobody really can figure out what it is. As if Russia is a communist country all it is is a one great big corporate business. It's one corporation instead of a cluster of corporations and it's did it works rather miserably and. I wouldn't think if you need to fight it it just fall apart because it's so boring. Of course, things in Russia if you go back to the whole history of the thing there were a lot worse when the brutal barons govern the country. And they are no sort of better in a measly way like in China. Things are pretty terrible ever since the British and their friends made a mess of China many years ago and China's been an awful place and things again in China and dowdy and uniform and dull, but it's so far as the basic subsistence is concerned it's probably better than an cause. But my point is, that we are fighting abstractions. Far abstractions recently the Congress of the United States passed an act against burning the American flag. [whistles] Stiff penalties, for burning the flag, and those same people who passed that act with a great flurry of patriotic speeches were actively burning up the country for which the flag stands they are allowing every kind of scoundrelly use of the water the air the natural resources and exploitation of the people until the whole thing is being converted into a smog boat. I flew not a few days ago from New York right across the country to Los Angeles and from New York to Denver there was smog over the whole country as far as I could see from thirty thousand feet. And this is America the Beautiful. You know blown up the flag is terrible but the country is quite OK because these people are confused completely confused between the symbolic world and the real world.

And so, this historical thing, you see, which is a destiny in the future always been perceived is completely destructive. Because technology clocks, instruments, measurements are fine for people who know how to use them. For people who know what they want. But the people who don't know what they want and who think that. The clock is the thing that's what you need I

mean the Russians are insane about this moment they move into a place with the army the design has some kind of technical civilization they capture all the responses in sight and the cover themselves with wrist watches like bracelets. Because they're time-crazy too. But those things are very wonderful for people who as I say, know how to use them. Because you can make significant plans. If and only if you are alive today and now know how to live and know what to do with now. But if you don't you never will. Because the only other time to start living is immediately do it I mean you know why wait around for something to happen let's let live it up now let's have a ball, you see. We don't. We think that if we have it now, something...we won't have it tomorrow. But if you always saving up for tomorrow, you'll never have it at all. Well let's take an intermission. I was discussing this morning. The way in which time which is a measure of motion, involves us in certain illusions. Principally what I call the historical illusion. That is to say, that the meaning of human life lies in living through a progression of events, which culminates and finds its satisfaction in the future. And trying to show you how in various ways. The illusion of history as been extremely destructive to people. How, for example, it fascinates us with symbols. They may be symbols of wealth such as money or symbols of status. So that the people who are in our world highly successful cannot understand why their lives are so empty. Because they lack presence, they lack the full rich rich relationship to the physical world in the here and now. And because they don't understand why they're so miserable, they think they can cure their situation by more of the same that is to say by bigger and better futures, more money, more power, more status and so they go on compounding the problem and still failing to understand why they're increasingly miserable. And they don't know what they want because there wants to have as it were grown to dimensions whether inconceivable. And so they also don't know who they are because they have confused. The true organic living being. With the mask, the persona the role, constipated around the ego which they have. Been taught to believe themselves to be.

None of this is to underwrite the real uses of time that is to say of clocks because all time is a matter of flux there is no time in nature there is risen in nature yes there is motion in the region but the clock as a measure of motion is a human artifact. The world as it spins on its axis doesn't tick.

And I also pointed out that the calibration of the clock. Whereby we have hairlines to designate the point at which a certain second because is symbolic of the emptiness of our moments. When the moment is reduced to a hairline, you feel that it's here and gone. That you can't ever really be now because it's all flying away all flying away and you can never sit down and be there. This was fast problem is easy when he attains his highest moment and his calling are still to lay thou art so fair. The moment is a curious thing. It isn't fleeting at all. It looks as if it is but it isn't. The moment is always with you. And this is the point to understand this is the point of all those spiritual exercises which are concerned with concentrating on what you are doing now and keeping your mind on it. For example, in the practice of the Japanese tea ceremony, the entire art of it is to have complete presence of mind. To be completely with doing just this thing so likewise in all sorts of yoga exercises try and be completely now. The whole training of a Zen monk day in and day out, throughout his discipline whether it's meditation or whether it's work or sweeping or cooking or eating or whatever it is they can they keep insisting do what you're doing eat when you're hungry, sleep when you're tired. And do that. But the point of that exercise is that after you practice it for a while it suddenly occurs to you with a great shock which is a sort of satori. That there is no where else to be but the moment, you cannot be anywhere else. It doesn't flow away it's always here. Maybe a lot of things flow through it. Forms change, experiences change rhythms change and so on but it's always there. So you have plenty of time, in the sense of real time, which is the moment. To have time is to have the moment.

And you remember the story that Flora told at the end of last session where the Dalai Lama's brother says that yes it was very nice to come to the United States but the problem of. The difference between here and Tibet was that here you have all sorts of power and whatnot but you have no time. In Tibet you have a very primitive existence and lots of time. And it's so interesting to get into a culture that is so-called primitive. It's very easy because you can now take a jet plane to Puerto Vallarta, in a matter of a very short time you can be. In touch with a culture that is ageless. Because you only have to go from part of I outed on north or south to the Indian villages along the coast which you can only reach by boat. Or by a jeep through jungle roads which are just terrible. And you get up to these people.

And suddenly everything stops. You know where they going. They are doing the things they've always done. And it's sort of it we we we always say it's a sleepy village. Not very exciting.

So actually, Zen is the art of combining an exciting life with living in the complete present. Very curious, it's not sleepy at all it's not like you think of a sleepy village. When you watch Zen monks walking. They don't dawdle. They're like cats and know how a cat crosses the road. It has a complete kind of. Knows where it's going, it's just like that.. And that's like a Zen monk walking. It's a most curious combination of what you would call the virtues of economy of expertness in doing what you do and that the same time not being any hungry and anyhow very this zen master in San Francisco Suzuki Roshi is particularly at my by his students for achieving an enormous amount of work. Without ever seeming to make the slightest effort. And he can move they've just been working down at Tassajara Springs, and they have rearranged a rocky stream to make it look more natural. And he can move bigger rocks than any of the tough young men who are working along with him that the fantastic. But it's all based on the real relationship to the material, especially to the material moment. And working in such a way that you never strain yourself because you never rush. You don't have in mind the goal. And of being wanting to get there in the greatest possible. You have in mind simply, that every phase of doing the work which will eventually arrive at that goal is as much worth doing as when you're playing music. You are involved completely in the production of the sounds as they go along without hiring them to reach the end. It's the same as sex. A lot of people are in a hurry to reach them and therefore they don't and they never have sex all that satisfaction as they have nothing but orgasms. And all the people stopped a great deal about the importance of the orgasm and that's true and right and perfectly proper It's worth nothing without the build up. You know, if it were to be the same thing as taking dietetic pills where you have a few pills which contain all the essential nutrition thrown down get on with real life or by having some substitute for sleep. That you could take a pill and not have to sleep. Incidentally, I just want to put in a parenthesis here about the importance of sleep. There is a very special kind of sleep which the Hindus call Soshipi [sic]. Sleep without dreams, and very deep. And it's it isn't isn't sleep funny that you go to bed

and time is totally eliminated until you wake up and you seem to wake up immediately after you went to sleep and yet something happened.

Now, there is there is a way of getting into a completely profound sleep. Which I call I don't know where I got the word I call it a temple sleep. And it I found it best in a protected area out of doors. On a sunny afternoon or at night, where you get under a tree, and you get a suitable Pad. And you live your back. And you simply open up like a cat does a dog that sometimes you stretch in every direction like this and you surrender to the. And you sink, you let go, you imagine your body is extremely heavy so that it's dropping into the area and you just let yourself go to the night. With a kind of feeling that you are being moved through by immensely powerful life energy, healing energy or whatever, and you give give give give to this letting go of everything letting go of all control of all consciousness of all anxiety of all care about anything. And if you go right down into this immense depth. And then you wake up a little before dawn, and the sky is a deep deep blue, and you can see the stars through the leaves and I know and that feeling that you get when morning comes and everything is awakening, and there's a kind of extraordinary freshness to the world that you really thoroughly get with the dawn. It's a magnificent experience. But you see, it the trouble is that sleep strikes our whole culture as a waste of time. Why I have to take this out to see why I have to cut it up but what I'm indicating by giving you this little imagery is how it's possible to enjoy unconsciousness. And what restorative value unconsciousness can have. In just the same way a death you know. Stevenson's poem. Under the wide and starry sky dig me a grave and let me lie glad that I live and gladly die and I laid me down with a will. If you can see death in that way as the just as when you went to sleep you abandoned all the cares and so on, so in death, you abandon all responsibilities. People in the moment of death have had a great marvelous experiences with this if they got with it. Just think, you don't have to pay any more bills. You don't have to watch the clock enema you're not responsible for anyone you don't have to solve anybody's problems you don't have to solve your own problems, you don't have to avoid evil, you don't have to do good nothing the whole thing the whole strain of being somebody is abandoned. And when that happens some people before they die have this enormous excess of delight. And suddenly see the point of everything. And so, for that reason all forms of initiation. In

every place I can think of have invariably been connected with the art of dying in the middle of life. Die now. And give up. Give up the compulsion to go on. Give up protecting yourself. Looking for security, looking for all those things which when you get them but then you know that when you get security it hurts. Because you're worried you're going to lose. This is terribly true and so when you die in the middle of life they used to have of course in some religions ceremonies where you underwent a ritual death you were put in a coffin you went down into a deep pit. Some symbolism of death in Christianity your drowned, that's the Baptism and that's supposed to be but they forgotten to see what it was all about and. Then, when you come up. You would think now I have been relieved of all responsibility I have been relieved of all necessity to be anything because I become nobody. So they give you a new name, but they give you a nobody name instead of a somebody name. In Christianity when they baptized somebody they gave him the name of one of the archetype of angels or disciples. So that you were no longer. Say Laitius, you became Peter. And Peter is one of the nobodies the great nobodies.

So, I've noticed recently I've met a few young people who have abandoned the ordinary idea of naming themselves I met a young man just the other night and they said What is your name he said it's You. And I remember a story about Dr Spiegel when he visited my son in law and my son in law was very young and he got this formidable Professor Friedrich Spiegel and said I don't know what to call you and Spielberg said Just call me Hey You. So this kid's name was you and I found of various is that there's a man going around calls himself the Plastic Man and that's all anybody knows him by. Somebody came by the other day and suggested that it would really disturb the whole nation if an enormous number of young people all changed their names to Harry Krishna. And so that driver's license you go to what you do is you just go to the Department of Motor Vehicles and you say I've changed my name we're doing this through this license that Harry Krishna everybody would be angry.

This is see is the thing of this death death to the row that you thought you were playing. Giving up all these responsibilities to amount to anything to be something not here then comes this absolutely critical point which is why. It every initiated discipline there is a discipline now the words the

individual is in some way nurtured for that moment. Because obviously, the moment you have given up all the cares and responsibilities, you get an immense excess of psychic energy. As all the energy which you've been expending defending yourself is available for something else. So you become quite potentially dangerous. And so always, the society as been concerned about what will become a free people. Will they use the energy destructively, or constructively. But I mean the first thing to realize that to understand if one is concerned about this is that there is a great deal of energy attached to this. One normally supposes that human beings are naturally lazy they're not the people we call lazy are just tired. Or they're undernourished although the organism isn't working properly for reasons of that either tired they've been fighting themselves too much they can't stand it or else they don't have the right vitamins or something a human being is not lazy naturally. The human being is a very strange creature it has an enormous amount of surplus energy also does the stickleback fish. This particular fish dances a great deal to get off it's getting rid of its surplus energy. And so, in the same way human beings have all this energy at their disposal and the question is how to canalize it in such a way that they don't cause trouble with it.

So then, you have, in other words, to be ready with something to do with it. So as to canalize it and not just blow it all off. But it is all it's all contingent upon this huge gamble. Let me put it in this way, the that the initiation death is a gamble. Will you bet me? That if you completely abandon, all control. You know where you are the ordinary kind of ego control will control give it up completely see you're not responsible for any where you bet me that if you make that gamble. You will suddenly discover that you are full of great great stuff, great energy. And a lot of people will not accept that gamble under any circumstances, they're scared to death of it. Some people will make the gamble. And then be like the guy who won the Irish sweepstakes and is ruined for life. Because they don't know how to handle it. And this is one of the great problems of today when mystical experiences and things like that are so easily and readily available. For all sorts of reasons. That a lot of people who are very immature get hold of this kind of experience and don't know what to do with it, because they don't have the skills, with which and in terms of which this kind of experience experience can be beautifully and creatively used. It isn't just a matter of good will. The

proverb says the road to hell is paved with good intentions. It isn't enough to be a person of good will it isn't enough to be gentle as a dove. You also have to be wise as a serpent.

So I say this in a general preface about getting out of history. This is the real drop-out situation. For example in a certain way of talking is a drop out because he dropped off the wheel of Samsara, the rat race of birth and death where you are always living for a future. That you see in nature, you cause a vacuum. If you drop out of one situation you drop into another. And so observe where you drop-in when you drop out.

Well now, that brings me then to this point that I will call the great diversion. The future is something you cannot work for, for exactly the same reason that you cannot work to be happy. Happiness it's always said is a by product. And it will accrue to you through becoming absorbed in something else altogether in some other quest altogether. The quest for the vision, a quest for doing something, anything. May bring happiness. And so in exactly the same way, the good future the Great Society the grand tomorrow is never going to be attained by working for it directly. When you've got that idea which is embodied just as much in the five year plan as it is in the great society, of working for that thing. You will never make it. Eat only way you can get the good future is by a diversion from time altogether at right angles to the course of history.

So what is important now today is to create a diversion of such splendor that people will forget about the things they think are important. All their squabbles all their ridiculous projects for destroying the planet in the name of progress. And give it up because they see something else is going on which is. A great deal more fun. It's like you know you would have gambling tables at Las Vegas and in some great casino, there's been a terrible game going on all night where people are getting more and more emotionally upset and they're all in the out and there are tremendous stakes and there's a huge crowd gathered around. And water that doesn't come out and so on the sun is somewhere over in another corner of the casino something starts up and all the people here are threatening to shoot each other it's all over there they're all laughing and someone sitting at the back of the crowd a few characters of the big crowd you know the big serious

game going on they're all looking over suddenly hear this thing going on they started another and looking at the other table and I get to play off and go over there and start joining in that game and finally just at the moment when the immense crash is going to come out and these two great gamblers have gambled the whole universe on what they were doing as if they owned it, and they're about to we've got the bomb ready to though each other up they suddenly look around nobody's watching. They start looking over there, what's going on over there see so this is the only way in which we can do anything about the future at all is to create a diversion. Of doing things. And living in a way that is non-historical. And that is instead of preparing to live the great life as a result of all sorts of preparation use what capacities you now already have for living the great life to do it. Don't wait. And this will create a fantastic diversion from history. Then you see, man can attain sanity once again becoming non-historical. Like the bees. Like the ants. Like the birds. Now we look at ants and say oh ants we don't to be like that reminds a minute. But that's only because we're not close enough to the sea that different personalities if there are a bunch of dancing around. And they are apparently to us doing very very simple things like nurturing eggs and milking green fly. But they answer themselves all the different to each other. They have slightly different colorings slightly different wiggles on their antennae which are just as important to them as our facial differences are to us. And they have ways of communicating and they think that this is the very very good life. I mean they have occasional troubles and was and so on but they don't they they've lived that way so far as we know, for millions and millions of years, without any progress. Now you would say that could be very dull. Yes, it would be dollars if you kept keeping records and reading them. Because then you would say Oh oh well you would get too much memory. Now, one this is a very important thing again did let me warn you that I always exaggerate and therefore you must take it with certain reservation which we call a grain of salt. And memory is a good thing, sure. But it equally important is a forgettery. We have, in the human organism fortunately and massively a whole at each end. One for nutrition and one for elimination. And people don't pay enough attention to the problems of elimination. Least they pay it in a certain way. They pay attention to whether they're constipated or not. But that's not really the thing.

Disposal has become one of the major problems of modern civilization. As a practical problem for the city of San Francisco, where to put the garbage is becoming quite critical. Mountains and mountains and mountains of garbage are arising. And it is almost as if the human being could be eventually crowded off by his own wastes. That's because we haven't really thought about elimination and the problems of elimination. We've only really thought about the problems of keeping, storage. And the things we store. The... I'm appalled by the files that I'm required to keep. Other correspondence by the increasing accumulation of records. This thing I don't know why I make these tapes some people like to listen to them I never listen to them because it would take me as long to listen to them as it does to make it and I would simply be repeating the experience why do that if some student wants to go through something more carefully fine. But you can read a book so much faster than you can listen to a tape.

So there is a thing going on now called the Information bomb, which is the proliferation of records. And this is reach such a pitch or that it is plainly absurd. Let me give you an ism examples from a field that I'm well acquainted with, Oriental Studies. And then you know this is a small field of relative unimportance. But today, to be a serious scholar in the field of Oriental Studies. You have to make like you're a very very meticulous scientist. Because if you publish an article in The Journal of the American Oriental society, which is one of the dullest journals ever conceived. And you make a slight mistake with a diacritical mark, or a Sanskrit character or a little line wrong on a Chinese character you will next month be demolished in a footnote. By some pesky scholars. And, here they all are, there they've got so much detail in their head they know so much so much information has been acquired it would take nobody could possibly master it the articles come pouring out there if it's that way in Oriental Studies You should imagine how it is in electronics. It comes and comes and comes and comes and I was talking the other day to a man who has done a great deal of work in this and he spent fifteen or more years acquiring some Tibetan prints, and he could out of this material compile to enormous volumes to be published by university press, with every kind of commentary on these prints and what would happen? They would be bought by a few big libraries and one or two scholars and nobody would ever read it. So he said to me I am through with that game. I am an old man, I have seen enough I have

attained all the academic honors I ever could want and I am now going to have fun. And I am going to publish these Tibetan graphics as far-out posters. But you see, what happens? After a certain point, this method of the intellectual analysis, which was always good and useful in the beginning and did some very lovely things I feel.... When you, you study. Let's say you take a course on Renaissance painting from somebody who really knows what it's all about. Or on Baroque music. Or on lida, or something like that it's fascinating to. See how those things were put together and why it's extremely beautiful but if you go one step beyond that it's like cooking the souffle just a minute too long or the whole thing disintegrates into dust. And as it is then, in the academic world today where you have an intellectual market going on to do this thing to turn out graduate students to turn out professors who have to put the new graduate students through the paces and all the field has been covered so they give them are not minute and ridiculous things to do and all the information because some of it is information. Piles and piles and piles and everybody including the scholars suddenly get around then say what on Earth are we doing? Especially if it's in a sort of historical humanistic subject that has no particular technical application. When Aldous Huxley graduated from Bill. At Oxford his tutor took him aside and said this to Huxley. You have a very distinguished record as a student. He was in English literature. And said you should very seriously consider an academic career in English that you would make a very fine professed and all the success that sticks trough. Because I always thought literature was something to be enjoyed not just. And so it is you say that the capacity for the enjoyment of scholarship is not really known to these frantic scholars terrified that they will be demolished in the foot. And having to make that thing and keep this thing going you know realise that the word Scola. School means a place of leisure. It was where there the if the phrase, a scholar and a gentleman. A gentleman meant somebody who didn't have to earn a living, as he owned land or something, and therefore he could devote his time to scholarship. And so a scholar and a gentleman would acquire gradually a beautiful library and he would go into that library and read as an easy pace. No deadlines, no thesis to present the seven time, he studied for the love of learning. And all those beautiful light like the not barren sins library at eight thirty in Florence is a gentleman scholars library where he loafed the way many many good hours studying a subject that he loved and got to know a great deal about it. You

cannot produce scholarship by this method across the bay. It doesn't work. It produces simply increased harassment. Piling up of enormous quantities of irrelevant. Facts, yes. But a fact isn't the sacred thing just because it's a fact.

So you see in this way how a graded education system, with goals with aiming at God only knows what aiming at a professorship of a higher rank ending at a higher salary but whatever it is all that is irrelevant to the actual scholarship. And so as a result. The academic world is a lot of political games. With it I say again some notable exceptions one know there's certain still absolutely genuine scholars who are trying to avoid committee meetings and grading papers and all that kind of thing, because they still love learning for its own sake. But they're not many of them. And they have amazing put-downs. If you love learning for its own sake and you're not. Worried about all that final points that you could get caught up on they say you're a popularizer you're a dilettante, and above all, an amateur. And you know what an amateur is as distinct from a pro we've come to use the word pro the man as me is very competent and amateur the dabblers amateur met the man who does it for the love of it from the group ammo and Latin. The professional, the man who earns his living at it. It's curious how these things change.

So you see what we must be looking for is a diversion from that whole tendency which makes the professional instead of the amateur. That whole compulsion to use whatever it is that you do for some other end altogether. And other words I'm baking bread not because I'm a vocation to be a baker because it is my way of making money. If the soon as you do that you see you lose track here is the point. So the diversion this way instead of going on with the course of history. Robert Oppenheimer shortly before he died said it is quite obvious that the whole world is going to hell. And the only thing that could possibly prevent this is not trying to prevent it. [Because] the minute you get meshed with that contest. There is a there's nothing more. Nobody I know in this world is more hostile than a pacifist on the rampage. The bitterness the the vitriolic.

Once, I got in an argument with Margaret Mead. Ugh. And she was talking about she was in a very very highly emotional status is perfectly

understandable about the bomb. I said I am a little worried. That we could get so excited about this and so violently try to stop the bomb that we might inadvertently blow it up. She said, 'You are a fake Swami you have no consideration for your children and your children's children. You have absolved all responsibility for the cost of destiny of history.' Well, this is a you see today a very big question. Whether to take part in trying to save the world, or whether to mind your own business. And to do something else. I'm a say I wrestle with this question. Because there's still enough of the old conditioning in me say you really ought to get out there and do something about it after all you are responsible you and you you got a hearing and a lot kind of thing and I have to tell you it takes an enormous effort. To be lazy. To say now wait a minute go back to Lao Tzu, and never forget. That when I see a man getting ready to put the world in order, I know there will be great trouble. Govern a great state as you cook a small fish. But you see, the puzzle in connection with all this is the problem of the Sorcerer's Apprentice. You remember in this story which, what's his name Duka What was that musician made that they [sings]. He used the magic to try and save the work. And it got out of control. And when the broom wouldn't stop searching water. He didn't know how to stop the spell he chopped it. And immediately it turned into two brooms, rained twice as much water. And as he'd hit them the fragments standing each one into new broom bringing more water. And that's the situation we're in. See, we're in an economy, which has to expand or collapse. We talk about a growing business it means one that's making more and more of no nor more every. So everybody has got to be inside to want more and more and more products. And if you don't do it you're a bad consumer, and there are all kinds of ways of pressuring you into being a good consumer you come around here and you live on a houseboat. Well, we don't pay taxes because we're above. And well our water is people. And I say orchard don't you have a sewage here. And the boys says no. Well, that's a serious health problem. Well it does just isn't. Everybody who lives around here is very healthy. And the main problem in the bay is industrial waste chemicals kill the fish fish like our waste Fishley mackerel they thrive on all you've got to do is bring a basic shipment of mackerel and duck. And I want to bout the girl the birds you know they they deposit their excrements in the bay and at certain times of year you can hardly see the water from where they got to do have process going around shooting the birds because they're fouling the

Bay what they want in this bay is distilled water with a ten percent saline additive for realistic effect.

So the thing is, that if you live in this sort of thing eventually somebody says well we won't insure you or you're doing this regulations wrong that regulations wrong the real reason is that you're not being a good consumer. You don't own the right kind of appliances the right kind of car the right kind of anything and so you're considered a bad consumer when you've got to go on owning somebody made a fantasy a little while ago about the future, where everybody is required by law to possess enormous flashy cars and fantastic expensive things and only great business tycoons will be able to get away with driving jalopies. And wearing old clothes. So, but you see in that situation where you must, you must, you must increase increase increase like this you simply not viable what's happening to you is the way you kill poison oak. Who feeds certain hormones which you paint on the leaves and this promotes the growth so excessively that dish blow up. And we're in a situation like that's where our progress is cancer. We're going to blow up by sheer bluh. And less and less you see we stop. Stop the future. Time has got to stop. And create a diversion. At the end of the question period yesterday, I said with under something which I would have to take up today. And this arose because we were discussing the problem of prediction. Which is of course related to the problem of control. I had made a passing reference in yesterday's Seminar, to the fact that the knowledge of time, the knowledge of the future, what Korzybski calls man's time-binding ability is a an advantage for which we pay a very serious price. To know the future in a conscious way gives you obviously a survival advantage. But at the same time it gives us a vital disadvantage so that what you gain on the roundabout, you lose on the swings. You gain the ability to plan. Your future, say to invest to take out insurance to do all those things that are called provident. But the price you pay for it is anxiety. And you pay this price because you know that you don't know enough. That you know as it were, enough about the future to try to be profit or if you don't know enough about the future to be sure the chop Providence was correctly done. Therefore you worry. Therefore you are concerned with what will happen tomorrow and it's so extraordinary that that passage in Saint Matthew's Gospel where Jesus says, 'Don't make any anxiety about tomorrow what you're going to eat what you can drink,'

and I am amazed about that because every minister I have ever heard discussed this passage says it can't be put into practice. Is that the church simply never did teach that that's they they the most a verse of passage in the Gospels which is swept under the carpet say. In a way because, Jesus told all sorts of stories in order to make people think. This one this this image of the flowers of the field and the birds that don't make any plans. And he did another one for example the story of the Pharisee and the publican, very interesting because its effect is X. is extremely funny he says here is the Pharisees goes up to the front row of the church and stands up and sort of memorializes God on what a good guy he's been. That he's fulfilled all the duties and so on then there's the public a new creeps into the back and beats himself on the breast and says only God be muzzled me as an see now having told that star the situation is completely reversed. Because then all the Prince creep into the back of the church and beat themselves on the grass and take up events of all to me as an insult or now we would have to tell the tale exactly the other way around and say now the honest guy is the one who simply walked straight to the front and addresses God man to man. But you see, what people don't realize in what I would call guru manship the art of teaching is that the teacher tells tales not for their immediate obvious meaning that their later effect. What is the result of having told the story? In this story is completely deflated say humility. Where you try to be humble It's a con.

So in the same way, that the passage on be not anxious for the morrow really asks you, why can't you put this into practice. Here's a precept, who contract nobody they say oh it's impossible, we cannot give up making plans we cannot give up prediction. Of course we predict in a way. In a sort of unconscious fashion. The simplest act involves a kind of prediction. So in this case, we are simultaneously aware of things which if you do regard the present as a hairline would be called Past and Future at once. But if you not hung up on the idea that the present is this Helen thing which is purely abstract then you have no problem in accepting the idea that we are simultaneously aware of past events and future events. Because they're all, just like you're watching from a traveling vehicle and you can see where you're going to be and you can see where you have been from where you are now. So in that sense then, we have a knowledge of the future when I move to pick up my glasses but that is a different kind of knowledge from

when I speculate in an abstract way as to what I ought to do a month from now or might might happen a month from now, you see.

So then, the question then becomes we we predict those far future which are not within our present vision, by calculation. It may be astronomical, navigational calculation or as it was in all times astrological. People thought they had in astrology the means to foresee the future know what to do. And then the question arises, Well what of... Supposing there is a fine science of prediction whether it be scientifically respectable like navigation or meteorology which isn't too hard. Or whether it be something like astrology. Are these really profitable sciences? Now I pointed out the problem is A, that when you know the future, you pay for it with anxiety. You know I am going to die. A creature that doesn't make predictions like a cat or a dog, when seeing another dead cat will not necessarily in that's going to happen to me. Because you see, a true animal a truly functioning entity, is not self-conscious in that way. For example, you all know. That only other people have head. Only, how do you become concerned with your head. Why, because you have been made conscious of your face. You looked in mirrors you've been talked about is the only part of our body that we live permanently. And even when we put gloves on you know their hands are covered. We always keep the face naked. And you learn that you're there in terms of having enough. You can touch. For a good face and lose face all these things indicate the importance of the face is it one that every where as inside beyond the face where are you. If you were living naturally. You would be as unselfconscious as your head. You know even than the brain is not sensitive to probes.

So you you would live in terms of all this is going on as you. But you've been taught or the idea you've been smashed back into your head, see, by social indoctrination, and your face has been made to stand for you. The real you behind the face is everything that you see and hear touch and sense. So the headless man, you have never had to go out of your head to lose your mind to see is in a way always characteristic of the wise man. Because he's come back to his original emptiness, which is behind the face. See when you turn, to see your hand and what is behind the eye you can't it's not dark. It's not light. You just can't apprehended in any way at all. And that's what it's all about. But so then, when you start calculating and

you resort to projection. You are now trying to get hold of all of us. But many people have an instinctive feeling say when confronted with a great astrologer who could tell them all the future I don't want to hear. And rather not. And this is in a way a wise, if uninformed reaction. For the simple reason... Well let's put the other point of view from another point of view would be a realistic person saying the trouble with you is you don't want to know your future because you're afraid of life. If you were know your future you could take practical steps to adapt things to it if you knew you were going to die next Tuesday, you would immediately put your house in order and make less trouble for your friends and relations. Face it. That sounds all right to begin with. It's like all technology is initially a success.

But the real problem the kindly comes to is this. When the outcome of a game is known, the game is cancelled. Because the whole point of playing the game is that we don't know the out. Because the known future is already past. And the higher the degree of certainty of knowledge as to the future to that extent it has happened, you had it. And we don't want to put the future in that situation, not really. Because the how easy if you think of the cosmos as basically a game of hide and seek. Where the Lord God is creating the universe by forgetting that is God I'm imagining that if you. Then this is the the fundamental way of getting rid of the eternal boredom of knowing all about it. And of there being no surprises. The whole the whole vitality of being alive. Is that it is always surprising. To be enlightened is to be surprised at everything. That it is a wonder that everything is a miracle that it is highly improbable, and really shouldn't happen the role but there it is. If there isn't that sense, there is no vitality in any of it. That again of course we have the problem that I discussed yesterday in another form the problem of order and randomness and the drawing the line you see, where to draw the line between order and randomness so in the same way where to draw the line between the known and the unknown how much to predict how much to say well, I'd rather leave tomorrow to tomorrow. Sufficient unto the day is trouble.

So, you see again it is all a question of where draw the line of how much to control and realize that when you go beyond a certain degree of control when you go beyond a certain what I will call natural prevision such as. I described by the analogy of looking out of the when the train when you go

beyond a certain degree of natural provision, you will encounter a law of diminishing returns. The more you succeed the more you fail. And then you get into this sort of. I describe it yesterday from the academic point of view when scholarship acquires an exactness and a highly detailed degree of information. That constitutes an information bomb and nobody can keep track of it and the whole thing becomes a bore who wants to keep track of it any longer who gives a damn you know about those final details of Shakespeare's use of the conjunction it. So in the same way, in practical politics, we have reached a state today where law is out of hand. There is too much paper there are too many whereas if Sands about subclauses and so on and nobody could keep track of it the whole thing is in a state of total confusion and this confusion exists in the name of sanity in the name of trying to set things in order because everybody shouts when somebody does something wrong there ought to be a law against it and soon there is indeed a law against it there's a law against everything we are all at this moment doing something illegal. I don't know what it is but it's always there and somebody can find it out and invoke it if they wish to make trouble for us. I'm quite sure that my entire situation is illegal. And that's a so for everybody. And this is the result you see, of wanting to pin everything down.

In ancient China, the Confucians had a thing they call the rectification of names. And they were the Confucians are curious people because while they have some marvelous ideas there's certainly lacking in humor. And they're rather ponderous and puritanical and stuff in. The Taoists on the other hand have humor. And always making fun of the confusions are they the rectification of names was that Confucius said we must be sure when we use words that their meaning is established. So this means the dictionary. And so they were they were the first real serious thinkers about dictionaries, about definitions about laying down what the words mean but the Taoist pointed out by saying if you're going to rectify the words, What are you going to rectify them with? Well they said with words well then they said what are you going to how are you going to rectify the words you used to rectify the words. Well I thought about that. And then they said well their words are self-rectifying. That is to say, you rectify words with words and the words you use to rectify the words are rectified with the other words it's a close circle.

So you can't play a game called Vish. In which you supply the players each with a copy of the same dictionary. And then you have a lot of words written on slips of paper and a hat and somebody pulls a word out of a hat and everybody looks it up in the dictionary. Then they take the definition and they look up a key word in the definition. And look that up and so on until they get back to the word They started with. The first person to get back to the word that everybody started with calls out Vish, short a vicious circle. And then there is an umpire present to rule on whether they cheated in other words whether. They looked up. When they saw our knowledge to observe to record on looked up the word to instead of record or observe or whatever. So far the dictionary only. Gets out of a vicious circle where there is a picture beside the word. Then it escapes. But otherwise all attempts to pin down words are simply going in a vicious circle.

So, one uses words effectively by not trying to pin them down too hard. But, we are always saying. Put it in writing. If we're really serious about an agreement between two people put it in writing. Because I can trust the document but I'm not sure if I can trust you. Do you exist prove it have your birth certificate passport card of identity if you can produce this wretched piece of paper you're there if you can't you're not. Well obviously it was a good idea to record things that we could be sure that people wouldn't be dishonest. But all this started from people being the sun. And in if we are going to stop people from being dishonest. There's only one way to do it. And that's what people not to be dishonest. No other way there is ever that event it will prevent. And if. You think you can go on living by preventing people from being dishonest with you by rules and regulations and laws and police and all this can you eventually you succeed in the short run once again in the long run you run into a total tangle. United States is the country in the world with most laws. And yet our police are completely mistrusted by every saying they're crooks and scoundrels and violent, fascist kind of people. With exceptions, you know everything has exceptions, you know, a nice cop on the corner... That by, and large through. The state in which say people say oh well the law will take care of. The law won't. You have to take care. And you can only be a law abiding citizen by trusting our fellowmen. And if you don't do that no one will trust you. And therefore a system of mutual mistrust will exist which of its very nature must fall apart. It cannot operate.

So once again, you see this is a quite a problem of the confusion between physical reality and symbolic reality. The law says this therefore it must happen and if it doesn't happen somebody is there with a club see that it does. Maybe, unless you one go out can see conceal it find a loophole in the literature. Get a good lawyer. That means a man who can say that the law didn't say what it was intended. So that then of course, everybody is accountable and that means keeps accounts. And. I are increasingly find that it's difficult to operate. Because of all the records that have to be kept one spends more time recording than one does doing. So, this is to say then that the symbolic method, prediction, recording or prediction is based on recording and on it's like you take a graph of the movement of air of a stock or of anything anything you want to graph and then you establish a trend to see where it's going.

So recording is the basis of prediction but if you go into this beyond a certain point. The process cancels itself out because it's no longer worth doing. So the wonderful Jewish idea, of the Year of Jubilee, you know, when all debts are cancelled and that begin again. That's what we need now we need a new chemical or you know in a lot of people talk about putting nerve gases in the air which will immediately paralyze the enemy what we need is a gas that will destroy all paper whatsoever. I wonder what would happen, I've often thought about it. Even though I depend for my living to some extent on paper writing books. I think on the whole the benefit to humanity from the complete disappearance of paper at this point. Wouldn't have been true absent some other time but now I think that much would be said and it would have to include plastics celluloid film and all that other things well. Yes all recording to disappear in other words the book of the recording angel is to be eaten up by God. If they are this is the thing.

Now, that's of course I'm being please understand I'm being somewhat facetious. And that this mustn't be taken quite literally, but it is saying this point. Look at it look at a different group of tourists. I take people to Japan every so on, and the Japanese are absolutely with wherever you go the tourist the Japanese, everybody, they carry cameras. And the very nice to have a camera and photography is a fine art but there's a certain kind of people who never never look at any except with a camera they go around capturing reality in this box. And there was one man who was a magnificent

photographer who came along with me who never did anything but photograph. And he was always late and dawdling behind the other people even though we moved with a very leisurely pace because he was interminable photographing photographing photographing capturing the world stuff and making a still see with his box and movies and the another kind of still is a more complicated. So the clutch box you go around with as a result I find that people do not relate to the environment is the only thing that you should ever carry when you're strolling is it is a scarf or a crane to help you climb your hand should otherwise be completely free of income. So should your eyes and ears and everything then it will really happen. But otherwise, if you go around with a recording instrument all the time it won't happen. The only good recording instrument will be one that you were completely unconscious of. That you didn't have to focus and flip and study instead of looking directly at things were going on participating directly with people in social relationships.

So in the same way, when you have... you're seeing wonderful landscapes and works of art and antiquity also when people have very good times have a picnic at the beach and it's a delightful landscapes, someone should have brought a camera, to prove that this really did happen. But what happens instead nowadays when somebody gives a great party and all sorts of people are invited they are sure that the society reporter comes from the press. Then they can read about it in the paper the next day and look back and say now that really did happen it's in the papers or the same way a young adolescent who feels that he doesn't really exist commits a crime in order to get his name in the papers there will be headlines as a great hero and villain. And you know he's there he'll be recognized. It didn't happen if it wasn't recognized therefore, some very bright person pointed out all the while ago we have many pseudo events events that are created for the sole purpose of their being reported in the press. Like life goes to a party, remember those things all those parties were organized by staff of people who came up from Life magazine and said this would make a good target that set it up this way and they get various people to cooperate and all the and they have the party in the same way publishers instead of looking around for creative authors think up books then they find a hack to write them as if this would make a good book. And it's a pseudo-book. A non-book. There is all kinds of work done like this. Foundations invent projects,

Suter projects. Because instead of you see what happens is that. Instead of going around with a kind of field staff looking for what artists and scholars and people actually doing that is creative they stay in the office, and they get masses of applications come in and which are too boring to read. So finally, they sit around think up what would make a good project to give all this money to and. Then they think up a project then they go around and try and find people to do it and all those people they find are frustrated Ph D.'s from Harvard and elsewhere who are sort of academically competent but don't have very much on the ball they have to be told something to do investigative research.

So it's the same principle, all along, which translates life into a system of symbols. To predict the future for us. Then it makes us anxious to see how the vicious circle operates and having made a sanctions we turn back to it and say you solve this problem we don't want to be and we want a full proof system. Back to the recorder that are closer study of the symbols how can we are with the future. But you see? It's a complete vicious circle the law it's a seed the more it sails the more you are quite sure where you're going and the plane won't crash under any circumstances. By the time you can travel from here to anywhere in the world in an absolutely assured won't-crash plane, I assure you, there'll be no point in the. In the region. Because the place you will go to will be the same place and started this will look exactly like. Answer more. It will already. Let that journey in the completely full-proof plane, because it is absolutely planned you will have already taken that. That's why the place you are going to will be identically the place you came from. And so, who will then pay for their lines by travelling on nobody. There has to be the risk in it for there to be any point in taking. So this is the most important thing for all technologists to understand. That technology is a process, like cooking, like polishing, which you must do for a certain time and then stop. Then it's done, it's ready. It's created. But if you keep on keep on keep on keep on you you know supposing I have somebody I love very much and I like to stroke. They're not strong but if I keep on stroking are others going up. Up to a point it's fine, beyond that too much. And [this is] so simple I mean I feel I'm talking in platitudes. But this is a thing the people have simply neglected, when it comes to technology when it comes to law when it comes to the whole philosophy of prediction. Well, let's take an

intermission.

Well we come out of the most difficult part of the seminar. And in, by way of preface, I want to say, to reemphasize the point that I've made already, that in presenting ideas, I exaggerate. The reason for this is. That they are that insofar as I present ideas. Whereas the actual content of the philosophy is not ideas but experience, these ideas are intended to act as correctives. And so when you're walking a tightrope, you learn balancing. And so if you're in danger of falling in a certain direction, you throw the weight the other way. And there are all sorts of funny tricks to balancing as you know when you ride a bicycle. You turn the front wheel in the direction in which you're falling, whereas the person who doesn't know how to ride a bicycle tends to turn the wheel the other way so he falls over.

So in this kind of way what I'm talking about is always a corrective to whatever is a dominant current idea. At the end of that famous classic of Zen Buddhism called the sutra of the sixth patriarch of the Tanji [sic] the Platform Sutra. In a chapter the people of virtually neglected. Explains the whole technique of Zen teaching by saying if somebody asks you a question about metaphysical things you once are in terms of everyday life. If somebody asks you a question about everyday life you answer in terms of metaphysical. For example, what is the ultimate meaning of Buddhism master replies the cypress tree in the yard. Second example. Master and student are working together in the fields and the student says please pass me the knife. The master hands in the night blade first holding the entire handle in his hand the student says please give me the other end. Master says, What would you do with the other end? In the first case the metaphysical is answered in terms of the everyday in the second case the everyday is answered in terms of the metaphysical. And this is balancing, this is the whole meaning of the when Buddhism is called the middle way the middle way doesn't mean the compromise. It means balancing out. You punish answer referred to this as the path of the razor's edge.

So in this way if I use an idea at all, it is for the sake of counteracting an idea that is current. For example, Buddhists will explain that when the Buddha taught what are called the three signs of being. The three signs of being anitya, that all things are transient. Anatman, that there is no self. And dukha that everything is prostration and suffering. He did this not to say

that's the way it is really now finally this is the dogma this is my doctrine he did it to counteract. The idea that reality is eternal, [it's] it's flux. To counteract the idea that is a self that is the permanent witness of the trance in and around there of experience he teaches no self and to counteract the idea that the aim of life is happening as. He teaches the fact of life. Buddhism is a dialogue. It is not a doctrine. This is terribly important. There are no such things as the doctrines of Buddhism. There is simply a dialogue between a teacher and a student and the student creates the teacher by raising the problem. And so, there is the back and forth. In which if the student tries to fix on this part of you the teacher emphasizes that. And then, when the student says to the teacher, well all right, I'm going to agree with you whoops nothing to stand on goes over here or over here or over here or over here so that in the end of the dialog. You get to a position where you found that all opinions all views all drifty are inadequate. Because every view of Mt Tamalpais is different. And so there is no Say correct way of seeing MT time applies there was once a wonderful Zen master called E.Q. and he lived in Kyoto and in front of his temple there was a very novel in pine tree. And one day he posted a notice by the tree which said I will give one hundred yen which is quite a sum in those days to anybody who can see this tree straight. So soon there were all kinds of people standing around the tree lying on the ground trying to climb up on the wall above it and find an angle from which the central trunk of the tree could be seen as a straight line. There was one fellow who knew it was some monkey business going on at the would be with the problem. And so he went to a friend of recuse who was a priest of another sect but he was very friendly with this priest. And this priest was called...oh, what his name...something like a Rioman. And Rioman said, well the simple way to see the tree straight is of course to look straight at it. And so, the man went back to Ikyu and said I have solved the problem of the tree. To see it straight you look straight at it. And Ikyu looked very suspiciously because he wasn't convinced this man was a real understanding man but he nevertheless he forked out the hundred yen and said You must have been talking to Rioman.

So, now, let's it against as a corrective you see to our own fascination with time and our own obsession with the future pose the counter idea. That there is no future at all. And everything we call the future is a complete mirage. So is the past. There is no future, there is no past, there is only this

now. And you say well, that's ridiculous. Because so far as the past is most concerned concern we are quite sure of it. We know we've got every kind of historical record we've got our own experience to prove that. My mother who is not alive now will really did exist at one time that Socrates, that Jesus, that Alexander the Great, all these people really did exist and there was a past that led up to now it's all in the history books it's been photographed it's been recorded and obviously it's real and if that's real then it's perfectly clear that this process we're involved in is going to go on, and there is going to be a future. This is such elementary common sense, but I want to challenge it, radically. And we will take as our beginning the act of throwing a pebble into a pool. And you will see concentric circles of waves created. And you see, these actual waves flowing out across the pool. Now the truth of the matter is that they don't that water goes up and down. But no way travels you let the same illusion when you see a rotating Barber coil, a rotating screw the thing is revolving and it looks as if something is traveling upwards along that [these] excessive red stripes of the bubbles photo are moving up they're not moving. Now there's the basic principle this is the basic principle of the world considered as Maya or illusion. So then you might say reasoning from this that. There is something. That is history that there was Socrates, and there was. All these great figures and great movements and wars and all these political shenanigans that we call history. But they are all, what we're doing now, with simply the names changed. It goes on and on I like to tell a story of A which is the German story and it has Germany there was a fisherman sitting on that the river. And somebody came up on the washing and said it seems to me that you're doing something very cruel putting those worms on books and he was in they. He said, but they are used to it. What is going on is a constant repetition of the same thing. But appearing to be different all the time. Every day the French proverb plus ça change, the more it changes the more is the same thing. So that always, we get the idea that every situation is completely New You participants new personalities you children involved and yet. It's the same old process going on. Or you get a similar thing, and this comes out of their last day experiences. If you look at a Rorschach blot, under the illusions of L.S.D. you have the very odd sensation that you are watching. The watery ink flowing into position. It's still moving as when you know you make the ink blot and then you fold the paper across so underneath your photo all the angles blew up like this and finally fixes in a

certain position but you open it and where they are as you can see it's still happening it is moving but it's still. And this connects the very very importantly with the Zen philosophy of the nature of time. And I want to read you some quotations from Dogen who was a great founder of the Soto Zen school who wrote a book called Shobogenzo of which has never been fully translated We only have excerpts. And it's a funny thing as I was talking about this book with a wonderful Zen master who I think is really magnificent man, Morimoto. And I had Gary Snyder as an interpreter and as he's a magnificent average over the other wonderful command Japanese and an equally good understanding of them so I have the impression of the conversation that remains in my memory. Is that I had a direct talk with Morimoto. The interpreter eliminated. Very strange. So we brought up the Shobogenzo at that parable. He said it explains everything it makes it all completely intelligible. And we were discussing its translation of the discussing the translations and texts in general and he went on to say you don't need to translation. Not if you really want to understand Zen, that you use your own books, use the dictionary. Use Alice in Wonderland, use the Bible use anything is it that you realize don't you think that the sound of the rain needs no translation. And a few days afterwards I went with Gary to the morning lecture given by the master of Dido. And he was explaining in Chinese text and in the middle of his explanation tremendous rainstorm. And the thunder of the rain on the roof was drowned out absolutely anything he had. But he didn't stop. He went straight on with the lecture. Because, there was the sound of the rain. You know, whatever was going on, was it. And there's a funny lectures they have a show where the teacher sits opposite the Buddha, so if he sits on the side of the wrong but is it's over there and then the monks sit on the side and the visitors sit on that side it's a long rectangular and he carries on this dialogue with the Buddha. And everybody is invited to listen but you know it's a very funny thing it doesn't make any sense. So, this Shobogenzo, Dogen has a lot to say in it about the nature of time. And the nature of change. And the basic thought here is this. And I'm going to try and show you. How the same experience can be conveyed. By using language expressions that are formally contradictory. He says for example that the screen does not become the summer. And when what is done the word does not become the ashes. He says there is spring, and then there is summer. There is word. And then there is actions. And so by inference you now who are sitting here with me and talking, you

will never never die. Just as the world will never become your. T.S. Eliot plays the same idea in the four quartets and when he's describing that the passengers who boarded the train are not the same people who will arrive at the destination. You are sitting here are not the same people who walked in the door you changed. And so you are not the same.

So this is as if to say time is created by the illusion that this state and the state and the state and the state are in some way connected. Now you would say, well that is a kind of atomism. That is saying that there is that life is a moment like a movie. That movie is a series of frames on film, which by being spun through the camera create the illusion that it's not a series of frames but it's a single frame moving. Now this is one way of saying exactly the same thing as could be said in the other way and the other way of saying it is this. The notion that the movement of life is simply a succession of static states is a purely intellectual way of breaking things down. It's like calculus, it's like saying that a curve is a series of point instances. That when you hear a continuous sound. Aid if you analyze it it that that that that that that that that that that that that but you get it so fast going together that you can hear the intervals just in the same way as when the eye is deceived by the revolving cigarette in the dark. But one school of thought will say the reality of the situation is guess discontinuous it's got that that dot dot the other school of thought will say oh that's mere intellectualism. I'm the reality of the thing is real that you know it is a sweeping curving thing which has no structure. Now both are right. Both are absolutely right. It's just two ways of looking at the same happening. And as we can describe pain as a hot pang or a cold sting only oppose words so the realisation of the nature and movement of time can be looked at from these completely different ways one you can say there is there is only now. And you say well now is this way we happen to be sitting in this room but at another now we have been driving down the highway. So we driving down the highway, is not the same state as we sitting in this room. But that the point of saying that, that you driving down the highway is one thing and you sitting in this room is something altogether different the point of saying that is simply as a gimmick or what is called in Sanskrit a new idea or skillful means. For getting people to realize what it is to be here and now. And to see that this is what's important. Whenever you get into the meditative state, by whatever means then. You suddenly understand that the

whole point of life is what you're doing. Where you are. And this results in a kind of untightening of all your muscles. And you suddenly see that it really is worth looking around. That the chips of wood on the log, the funny markings on the concrete. The expressions and just to the people sitting around. Are what it's all about.

And there is no difference, between the ecstatic state of union with Brahman Nirvana, and the very matter of fact moment in which we are sitting around here in various pastoral feeling various feelings throughout our bodies thinking various thoughts and just because you consented to do so allowing the noises that I'm making to reverberate across your eardrums. This young ion young man that's going on is the young are young I know that everything is easy that's a. What it is that's what it's about. And you sit back. And you say yeah, that's what it's about. A lesson that I get that yeah yeah yeah. It's not marvelous you know that it does that at all. And that is called in Buddhism, seeing things in their suchness. Tathata, ta-ta-ta-, are saying everything as just that. This person goes this way the other person goes that way you have the style of that style. And so, in the scenery of spring there is nothing superior nothing inferior flowering branches grow naturally some short some long. But however, it is an extraordinary experience to overcome. The illusion that there really is time. Well let's begin this way. It isn't isn't it obvious. Bearing in mind the point that I made this morning. About our present not being a hairline. But I kind of fuzzy span which polarizes past at one end and future the other. These are simply the two ends of the present. As we perceive it directly but beyond that beyond what we perceive directly beyond what you see now here now feel now where is the past. What has happened to the pop of a champagne cork which you had last night. Well it just isn't there. And where is tomorrow's edition of the San Francisco Chronicle. It doesn't yet come of the press. It isn't there. So, from a sensory material realistic point of view there is no past and there simply is no future. Never was, never will. Your conception of the past is very subjective. You've only to study history to realize how subjective it is how many ways history can be written because every historian. What does he deal with? He deals with the records and with memories which are extremely fragmentary. Because he deals with mostly with verbal records and sometimes archaeological record of the past. And not only are these records fragmentary, that they only record those aspects

of what happened that were worthy of note. To someone or other who recorded but then when he in turn gets the notes, he uses them like a rorschach blot, and he projects on to them his idea of what happened. Anybody with a lot of experience of courts of law knows for example in cross-examining witnesses their testimony as to what did happen is extremely arbitrary and confused. We are making sense all the time of this rorschach blot.

So history is much more an art than a science it is a reconstruction by a historian. Who uses the materials of evidence in the same way that a painter uses paints. And in this way he reconstruct his version of the past and if it is sufficiently persuasive he convinces other people that that's what happened. Various sneaky governments have caught on to this, and realize that they can write their own official history about anything. And then they've got a doctrine that there is a kind of historical destiny or historical compulsion, certain things as a result of history not happen and then they use this to justify what they're going to do anyhow. Nowhere is this more apparent in scholarship than in historical studies of the Four Gospels in the life of Jesus. If you study all the great scholars, say from eight hundred fifty to the present day, who have examined the New Testament from an historical point you will find that every one of them has a different history. And that they have seen the texts from the point of view of their own particular way of wanting to present Jesus they've got excellent reason for rejecting all those parts of the text that don't agree with their interpretation and accepting those that do. And they cancel each other out a way down the line. So we know them from a sensory point of view that just as you cannot point to the difference between your. You cannot find the past. Equally, you cannot find any future. All it isn't here. And the future as such never will be. As the proverb says, tomorrow never comes. So then, you have a situation which is eternal. From the beginning of any form of the whatsoever. Whether it was mineral or merely gaseous whether it was an amoeba whether it was a plant an animal or human being, it knew that it was involved in a process. Or it was involved in the process even if [it] didn't know. Where the individual form begins and ends. All or does it. Where do you draw the line? Let's say we have a vibrating like this. Yes, you can point to that tangent you can draw tendons along the top of all the curves along the bottom of all those tangents that's the way you say this is

the crest this is the. Crest is where it is most that the trough is where it is not. But you see at once that you can't have the wave if you don't have both crest and the trough. And that every time it goes crest-trough. While that's away what is a way then we see. In the image of throwing the stone to the pool that there is not a wave. There is waving. But there is really no individual wave. You think you see this individual wave going out like that. Take a piece of cloth. Spread it out on a table, and then push it together so that you get a fold across the center. Right now move your hands so that you make that folding happen all the way across. The cloth doesn't move. The folding. That is this is a folding. Can you pin it down and say it's an entity. You can't. So in exactly the same way all our human history, from our earliest possible imaginable ancestors until now. Is standing still in the same place. Doing the same thing over and over again, coming on each time in such a way as to give us the notion that it's new. You are your fathers and grandfathers millions of years ago. You say they were sitting around in skins, and using stone implements. From the point of view of somebody a million years, hence we are sitting around in Skins using stone. The past people always were. But you see when those people were sitting around in caves with stone implements and skins, they had ways of conversing and relating to each other, which contained as much qualitative subtlety as we do. As we have. What we call primitive people have perceptions, ways of doing things that we would not even know...we wouldn't even know what to look for. And so they have in fact a very very high culture. Only its base it's structured say in a different dimension on a different wavelength than ours. But it is just as human and just as authentic. But we have the illusion you see, that it keeps changing. Getting better, getting worse one thing or another. But that's the same kind of illusion as the motion apparent motion of the wave across. So let's see how Dogen puts it because he's got some vivid ideas. If we washed ashore while we are sailing about we feel that the shore is moving. But if we look nearer to the boat itself we know then that it is the boat which moves. When we regard the universe in confusion of body and mind we often get the mistaken belief that our mind is constant but if we actually practice then and. Back to ourselves we see that this was wrong. When firewood becomes ashes it never returns to being five wood. But we should not take the view that what is Lassally Ashes was formal if I would what we should understand is that according to the doctrine of Buddhism firewood stays at the position of firewood. And then ashes at of the position

of ashes. There are fallen latest ages but these stages are clearly cut. It is the same with life and death thus we say in Buddhism that the unborn is also the undying. Life is a position of time. Death as a position of time, they are like winter and spring and in Buddhism we do not consider that winter become spring or the spring becomes some.

Now, another quote: When a fish swims he swims on and on and there is no end to the water. When a bird flies he flies on and on and there is no end to the sky. From the most ancient times there was never a fish or swam out of the water nor a bud who flew out of the sky. Yet when the fish needs just a little water, he uses just a little and when he needs lots, he uses lots. Thus, the tips of their heads always at the outer edge of that space. If ever a bird flies the on that it he dies and so also the fish. From the water the fish makes his life and from the sky that makes his. But this life is made by the bird in the fish at the same time the blood in the fish are made by life. Thus there are other fish who work and life and all three Create each other. Yet, if there were a bird who first wanted to examine the size of the sky, or a fish who first wanted to examine the extent of the water, and then try to fly out as when they will never find their own ways in the sky or water. So what he is saying now. Space is as far as you can see. The father you can see all of them all.

So with time, the element of time is as much time as you can know. But this I mean here direct knowledge your present a section of time which you call the present. To be concerned with the future you see, would it be like the fish who gets out of water. He would die. So, to put it another way. What you call time is not something into which you have been dropped as if somebody had dropped you onto an escalator and you suddenly found yourself carried by it. What you call the experience of time is you. It's not some, something else altogether you see, in which is a trap for you you are time all right you go on you want to go on? I go on, a great you create time I want to go on. Why do you want to go on? Well you say why, because one must go on why why must you go on? You feel compelled. You know. It's our duty to go on. How did you learn that? Well we were taught it when we were children by our parents they said you must survive you must live. And they were taught that by that so they knew no better. But if you live a life in which you feel you must survive then your life has a track. And you go on,

and feel you must go on, because you are not fulfilled now. If you really understood the now, you would not feel that you have to go on. As Confucius even put it a man who understands the Tao in the morning can die content in the evening. If you feel you say I must go on, I must go on it is because you have not. Lived. You're always hoping to live. So then if you come to your senses, which will tell you there isn't anything but the now. And that therefore because there isn't anything in the now it is supremely important. To rest in it. To get with it, to be one with her. You will understand the point, what's going on. That you, in your way, are your fathers and your grandfathers come back. Myriads and myriads of past events are still going on in you and you are doing the same thing. Only it keeps looking different, in the same illusory way that the wave appears to be moving across the water.

The Future of Politics

This then, is the last seminar in the series of seminars on the future. Devoted to the subject of the future of politics. All along, I've been emphasizing a particular point. Which is this: that the very idea of the future, has something spurious in it. That to live for the future is an indefinite postponement moment of life. And that the great political systems of the Western world, whether they be capitalist or communist, are based on the notion, that what we live for is the future and this is a very funny thing when you specially when you think about Marxism, because the Marxists have always said that religion is the opium of the people because it's based on the idea of pie in the sky when you die. But in fact, the politics of Marxism are just as much pie in the sky, it's always a five year plan for something to turn up that will be better than what we have now later on.

And in the exactly the same way, our notions of the Great Society are based on a futurist approach to life. Wherein you go through, in your education, a whole series of steps. The word in Latin grottos. Means a step. So we have first grade, second grade, grade grottis grottis grottis. I'm a graduate you know you've gone along the steps but just still doing it. So that when you become finally successful as the president of your corporation. You have a funny feeling of being cheated. You climbed the stairway, and you got to the top, and there's nowhere else to go. And since he never been taught to

live in the present, you don't know how to do. So an insurance salesman comes around and says, 'Listen I've got the very thing for you.' Retirement program, because when you're sixty five, you'll drop out of the system. And then you'll really be able to enjoy yourself, despite your prostate trouble, menopause, false teeth and everything else and.

So really the art of living in the in the eternal now, is not taught in our educational system. And it's not taught because it's thought of as being feckless, irresponsible. It isn't irresponsible at all. It is everybody's duty. I could put it that way, to enjoy themselves. Because if you don't do that, you become a nuisance, you become aggressive, you become a robber, you become a thief, you become a somebody who's trying to organize the rest of the world that is to say a power maniac simply because you haven't learned the very simple inexpensive art of living in the present moment. It really doesn't take an awful lot of energy to maintain a human life. If you really consider what you need to eat. What you need to wear, how much housing you have to have. It comes down to something quite simple. And the simpler, the more you have the capacity to enjoy watching a raindrop crawl down a window. But if you watch a raindrop crawl down a window and you think my look at that everybody says you're crazy, why are you watching a raindrop fold out of their country find something more important to do that means country make more trouble than that?

So the, the mentality, that doesn't recognize the importance of watching a raindrop crawl down a window. Is the one that is creating the trouble in the world today. I had an astounding session just a day or two ago with the chief of an Indian tribe. He was from the Western Shoshone Indians which are located roughly around central Nevada. And he was explaining how the government of the United States is really seriously trying to get rid of the Indian way of life completely. Especially by virtue of a bill which allows the Indians to borrow money on their own land, you know what I mean that.

So having it when he had told his story. I said Well now 'What do you want us to do about it?' He said, 'That's the wrong question.' I knew this was coming. He said 'You pale faces, you white people, you always think about doing something.' That means in voting in politicking. That's what's the matter with you. So I said, 'Yeah that's what's the matter.' He said we're

going to do something about it but we're not going to do it in your terms we expect you to be sensible enough to correct your own actions. We're not going to fight you, in the ordinary way, not on your terms. He said then further we are in harmony with the physical earth and geography and the sky on the waters of this country. And you'll strangely find that there are going to be more and more tornadoes more and more earthquakes more and more natural disasters, because you are, as people, you are violating nature. You are destroying it, and it will fight back against you and we are nature we are not. Some strangers on this land, we are the same thing as with the same process as the Land. And we regard ourselves as the same as the continent. And it's not just us in North America. It's we're in touch with the Indians in Peru and Chile, Brazil. We are one great family and we're just waiting for you invaders from the west from Europe to strangle yourselves and get rid of yourselves.

But the, in other words, he was saying that he wouldn't play the political game. Not on any account. And didn't really want us to play a political game on their behalf. Now this is something so inconceivable to most white people. Because for example, when you get Indians on the reservation and they don't do anything, and they don't develop it, and they just sit around and we say well they're no good. They're just lazy. They cannot make us understand the importance of a contemplative life. We say you are of no value, you're not even human, unless your changing things unless you're interfering, unless you are progressing. Unless you we confuse growing with progressing unless something is happening and great operation a new project is going on and you're busy with it you say, 'Well you're you're lazy, you're good for nothing.' Because you are not working for the future. But they say, if you're working for the future, you're quite mad. So they don't work for the future.

Just like a Chinese coolie. Works long enough to make some money. Then he knocks off work and he goes to the gambling joint. And he gambles or he smokes opium or just generally wanders around and digs the scene. And we say well that's awful that's irresponsible, you can't do that that's not maintaining the world properly. What do you think maybe that is maintaining the world properly maybe it's we who think that everything should be progressing who are destroying the world. Because we are by our

protestant ethic, by our notion of keeping everything in charge it's true we have a great initial success. We destroy diseases. We keep people alive. But on the end is the H.-Bomb get rid of it, entirely.

So, these nonpolitical people are saying to us, the trouble with you is you don't know what you want. You have a future, which you're working for. But you're all wretch and no vomit. You, you promised yourselves, the good thing is going to happen. You keep promising promising promising promising even your money is a promise it says on the dollar bill that the treasury of the United States will promise to pay a dollar. What they are going to get if you deliver this and say, 'Come on now.' Whatever it is that those dollars. And it is can give you credit. Because it's paper, it's all symbolism.

So, all these myriads of so-called primitive people. Like Amerindians. Mexican-Indians, Africans. Don't communicate with us. And we don't communicate with them. Because they don't want what we think is the desirable good society, or some of them do, of course. In Japan, for example, the Japanese have been fairly conned into the idea that the Western way of life is a great thing. And so they're by and large frantic industrialists. And so as a result the cities of Nara, Osaka, Kobe are covered in smog. Tokyo is just a madhouse. They're getting it.

So the whole point is, the future is an illusion. The basic ideas in Hindu cosmology, that in the course of time you go through the series of yugas, or the epochs. You begin with a great state of affairs and it gradually deteriorates, is a way of saying to people in the course of time, things only follow. Therefore, get out of time. Get off the wheel of sunless out of the rat race. So this underlies my idea of what I call the politics of diversion. Divert Western man from history, from the notion that he is in a historical process which is leading to something always better and better and better but which in fact only leads to more and more destruction. Divert people from time. By living a style of life which is timeless. And which is therefore more attractive than life devoted to time. That doesn't exclude our technological power. Part of the whole point of technology that I'm going to take up in detail and in a later session is that through technology, we have the power to obliterate poverty completely. But this must not be looked at in

a historical way. While it is looked at in a historical way it will not work. That is to say. The whole problem of money. And the distribution of the wealth of the world as produced by technology is a psychological problem not a material problem. People are hypnotized with money which is the symbol of wealth as if it were something that was valuable in its own right. That's the confusing money with gold when Ramakrishna said that one of the evils of the world was go he was I think perhaps unconsciously quite correct. There's a story, that once upon a time, all the banks in the world got tired of shipping gold from country to country so they decided to open an office in an island in the Pacific where all the banks had their headquarters, and all the gold was put together there so that all they needed to do and they had to exchange some gold was to trundle it across the street. And operations proceeded beautifully, for about ten years, and then all the heads of the banks from the different countries came with their wives and their children to visit the island and have a great convention. And so, they inspected the books and the transactions and everything was in perfect order. At last, the children said, 'Daddy I want to see the gold.' For the bank president said to the man it is, 'Take our children down to the vaults so that they could see to gold'. And so all those managers said well it's sort of difficult and problematic and takes a lot of time and then and the president said what don't be stupid What's the matter can't they see the gold. So they hummed and hawed and said well we're sorry to report that seven years ago it was a disastrous subterranean earthquake. And all the gold was swallowed up. But of course, we all knew how much we had at that time, and so we've kept the books according. So it's a joke. People don't realize, in other words, that that money is bookkeeping. And nothing but bookkeeping, and therefore the whole idea of taxation for example is a complete anachronism.

The thing that is stopping the flow of the actual wealth of the world is this fixation on money. What you need to do is actually reverse taxation. And issue, instead of charging taxes issue credit then you have to keep the credit balanced to the gross national product in some form of figuring and then everybody can circulate what they're making. Otherwise, you are in this ridiculous situation, where people are stopping in India, and we are hoarding food supplies and burning them and try and dumping them in the

ocean, which is sheer insanity, but it's all based on a psychological block about money.

So, this kind of psychological block is what an Indian philosophy would be called a Maya. It is an illusion, and it's the same kind of illusion as that of the future, of the idea that the future is when we're really going to live. And if that's the way you operate, when you get there, you're never going to be able to handle it, because you still want a future at the Europe. You're a special donkey with a carrot suspended from your collar on a rod is pursuing. Well now, when we approach the subject of politics, you obviously recognise at once that the word is connected to the Greek polis meaning a city. And the city as I've indicated in a former lecture is probably an ephemeral phenomenon in human life. As our technology of communication develops, cities are going to disappear. And for the same reason as our technology develops politics and it is.

Let's go back to an early stage of our development. When human beings changed, from being hunters, to being farmers. This is a very critical stage in the history of technology. When we were hunters, every male knew the whole culture. In other words, he had to fend for himself to make his own clothes to make his weapons to know the arts of hunting and also he was in charge of his own religion. The. Their way up peculiarly religious people in hunting cultures and their culture all medicine men. And the interesting thing about a medicine man as distinct from a priest. Is that he is not ordained by anybody else. He doesn't have to be approved, by a guru or by an organization or a church. He goes away alone into the forest, and gets his own thing. He may contact what he calls the ancestors, but he has to do it by himself.

Now, when a community settles. Instead of being a roving hunting people living in the forests. And they form instead of village. A great change occurs. Where do villages and towns occur? Where a road crosses a river or a road crosses a road. And then around that which would originally hunting tracks trails, a stockade is built. And that is called the pale. We say a person is beyond the pale. That means he's an outsider. Because the pale from the Palos the tree is the posts used to make the stockade. So inside the stockade, there are four divisions. Four blocks of Tam. And it is of the essence of an

agricultural, as distinct from a hunting culture, that you specialize, that you divide labor. And so, when labor divides itself, it tends to divide into four major groups.

Those, first of all, who are the brains. The Brahmins. The idea people. The thinkers. Second, the brawn. The military men. Who defend the scene. So they are called in India, the Shahtria. Who next why the traitors. The merchants the vice. And then next who? The Craftsman, the skilled workers should. Because then outside there are the people who don't have any particular qualifications. And there are low outcasts who are untouchable, but there are another group, who are very curious. They're also outside the pale, but they are respected for being outside the pale and they are called in Sanskrit Shramana. Which is the same as the word Shaman. Or in Chinese, Chamin, meaning an immortal, who lives alone in the mountains. In other words the people who still retain the values of the hunting culture. And say, like this, when you settle down in the city, in the polis. You new divide labor. And your Tinker, Tailor, Soldier, Sailor, Rich Man Poor Man, beggarman, thief. You assume roles, you put on a mask. And say I'm a soldier. I'm a priest but you get more masculine that. You say I am a person the word person means mask. Persona. The mask worn by actors in the Graeco-Roman drama. And you are taught while you live in the polis. That you are your mask. I'm taught that I was taught by my mother, that I was Alan Watts and I've never been able to recover from it. And so everybody is assigned this roll that you supposed to play.

Well, you play that role. But in ancient Indian custom it was recognized that that you played it only if for a while. That when you had raised your children. And done your social duties. That you then had to prepare for death. Death, when you were playing a role, seems a tremendous threat because what's going to become of me. But they'd explain that that doesn't matter, you would just have to find out, when you are ready to die, you can die properly and with dignity if you know who you really are. So in order to find out who you really are, you withdraw from your role. And you become what is called Vanaprasta, which means forest well instead of grihasta. In other words, you go back to the forest. Away from the polis, outside the pale. The doing of this may take many forms it may be purely perfunctory to retire to a cottage in the backyard you may actually go out into the jungle

you may actually tear up all your clothes and run naked and sit by the river. All sorts of ways of doing it. But you give up your name. You become nameless. Or you may assume a name, which is a Divine Name, one of the names of God. There are people trying to do this in the United States today called hippies. I met one the other night and I asked him what his name was and he said My name is you. And he absolutely would not acknowledge any other name in all. Well great. OK. You're you.

When you got to become Vannaprasta, you're outside the pale and you concentrate your psychic energy. To find out what's going on, what is this that we call existence. You just you can find this out quite easily but you have to pay attention to it you have to concentrate you have to give your whole mind to say take hold of a sound. And find out what sound really is. Or you can look at light, and find out what light really is, or you can stop something and find out what is going on here. And when you find out, you stop being anxious. But you see then, politics is the order of that transitory state which is the city arrangement, the role playing, the game of social life, designed in a particular style. And I'm not saying I'm not trying to say in any way that the policy is something wrong. We shouldn't put it down and say it's bad. The only thing that could be bad is to take it too seriously. In other words, if you take the fundamental idea that the whole universe all its forms all the forms of biology, all the different species the giraffe, the rhinoceroses, the Buddhas, the the roses, the eucalyptus trees etc. Everything is a form of biological game, it's a dancing thing on, different styles. And we wouldn't want to say to any of those things, you shouldn't happen. Because they're all the great Maya, other great illusion the great play and so the palace the human community organized with division of labor, with classes with. All the complications of economics and banking and transportation and so on and so on and so on, all this is a particular kind of play. And each form of it is as legitimate as say, different kinds of dancing, a waltz, a rumba, foxtrot, a frog, all other perfectly legitimate forms of dancing that the universe does. But the important thing to understand what the Sanyasan, in the Sramana, the man who goes outside the pale is saying is. Please, people who are in the pale I in my existence reminds you that you're only playing. Don't take it too seriously. Because if you take it too seriously, you're going to start destroying each other and

fighting and saying, this city against that city, this country against that country, and so on, because you're too involved.

So every sane society allows a certain number of people to deviate. Monks. Some sort of outsiders. And says you don't have to join, you don't have to play the game. A society which is insane and I'm sure of itself cannot allow that to happen it's everybody must join everybody must work. Everybody must belong. And then freedom disappears. Because as a matter of fact, the anxiety is, if you say well you don't have to join, there are conditions under which you can go out then a lot of people get together and say well what would happen if everybody quit? I asked what would happen if everybody decided to take American Airlines Flight three to New York tomorrow? Well they just wouldn't get on. I mean. And they won't anyhow. Because a lot of people aren't interested in that. Are not ready to quit. That doesn't mean that they're inferior a be a calling is not inferior to the oak tree. It's a potential oak. But as an a call it's just as beautiful and lovely a thing as a full grown. A baby is as lovely as an adult. Sometimes a great deal more lovely.

So, a person who is in the beginning state of evolution is just as marvelous as a person in a high state of evolution. Just as much a manifestation of the divine dance. So, when a society allows a certain number of people to withdraw. It should have no anxiety that everybody will want to withdraw. Because some people are absolutely fascinated and in competition in being involved, in playing the game. They should be fined for that. But we are witnessing in the United States today a great motivation for withdrawal. It's simply because we haven't provided for it. We haven't...there's no opportunity for a Protestant to become a monk. Or a Jew. The Catholics have half heartedly provided for this sort of thing. And there have to be people who stand outside the game. And do not identify themselves. With a class. With a name with an ego with a persona with a role. And a society which cannot tolerate that is weak and in grave danger of dissolution. A society which can tolerate it is short of itself inside. Doesn't have to insist on. Everybody agreeing with the way you see things. That's the nature of democracy you say you have a right to do.

So, furthermore underlying the nature of a democracy is the notion of mutual trust. And this is difficult in a polis. You can obviously. Have an ongoing human arrangement. In which, proper behavior between each other. It isn't forced. To live violence of some kind by police. After all, who stands behind the police. Who gives the police the authority. Why, the people do? But if the authority of the police becomes something separate from the off already of the people you get in a violent situation you no longer have democracy you have a dictatorship. So, but if you really trust each other you don't really need much in the way of police. Yes, you need some scouts to direct the traffic who simply establish which row is to move first. Not by authority, but simply pointing out that when we get to a crossroads, there has to be some sort of order here, and we let so many cars go through this way then we stop them and we let seventy cars go through that way that's the mutual benefit of everybody concerned so there's a scout there to give a signal. Which we've all agreed upon. But when that scout starts dressing up like a storm trooper, and putting on all kinds of guns and whistles and helmets and things like that then he begins to act his role. He begins to behave like that kind of a person. And he becomes a vested interest. And so we have to say to him. Go back to your boy scouts hat. Take off that helmet. On those bandoliers full of bullets, and those boots. Start looking like a human being again. And then you'll behave like one. Everybody will respect you when you put up your hands say this row please and everybody will cost naturally accommodate themselves.

So, as then a society tolerates within itself a group of people who play no role. Who are in that sense liberated. We come to see all of us, that the political game is not absolutely serious. That the laws of the state are not the laws of nature. That the laws what we could even call the laws of nature are very many of them, nothing but social institutions like time, like space and so on. And so in not taking our civic political life too seriously, we can live it at a decent pace. And stop from the idea that it is our sacred duty to impose our wonderful way of life on everybody else. And that you see is a quality of humor. When you don't take yourself too seriously. You can laugh at yourself. And this is the most essential ingredient for a politically healthy people is to be able to laugh.

So, that's why one of the difficulties about churches and law courts. I was in the law court some time ago giving evidence. The two accused people were smiling the judge at the gavel. They said, 'You two young gentleman, should realize that you're on trial for a very serious crime. And that this attitude of laughter is disrespectful to the court.' And their attorney got up and said, 'Your Honor, this is the first time these two men have ever been in court and they don't understand what the rules are.' And he said it's high time they did it. Now, every great court where every supreme King Chakravarty and presides always provides for a jester to be present. Because the moment the king in charge, or the Justice becomes too serious, he takes himself too seriously, there is tyranny abroad. And so a proper king has sitting right down there on his left a character in cap and bells. And in ancient days, the fools were very powerful people. Very important people. One of the fools of the court of England Rahir, founded some Bartholomew's Hospital out of as well. As the fool, as Shakespeare puts it, 'Within the Hollow Crown that runs the mortal temples of the King, keeps death his court.' And they're the antic. The antic is an old word for the fool there the antics that scoffing at the state grinning it is pomp allowing him a little time to monetise be feared and kill with looks. And at last comes death and with a little pin balls through his castle walls. And farewell King. Because the fool is the one who reminds you all the time that your mortal, your fallible. Human. Don't take yourself too seriously.

So, at the Congress of the United States at the sessions of the Supreme Court there ought always to be a fool, who says the judges. But you know, the trouble with Republics is that they are little insecure and they don't allow fools around. Very secure Kings only can allow fools. Dictators can't allow fools because they rest upon the will of the majority. They get into power through referendums. They sure can't tolerate fools around. It's only an aristocrat, a person who has come from a long, long line of rulers and is doesn't just isn't insecure about the situation he can allow the fool. So, if a people is to be mature democracy is to be matured it must allow the fool. It must allow the Joker. And not merely as a cartoonist in the daily press. To point fun at the goings on, the presidency. Somebody actually present at Cabinet meetings, who was appointed to be the maverick to be the funny in the hay session. In the same way a university faculty must have in its membership a small percentage of complete scruples. Who are not

respectable scholars who have weird ideas because they will keep the rest of the faculty alive. Not too many of them, always a little balance like the salt in the stew, a little bit but not too much. That is always the element of the people who say to the whole system it's going on to the whole reality of life 'haha.'

So now, I want to contrast out of Asian sources, two great theories about politics. Respectively, from two books. The first book is the author Shastra. Which is the manual of political wisdom, originating from what you might call the great period of medieval India. And the opposite sort of book altogether the Tao Te Ching from China. Probably four hundred B.C. These books contrast with each other in a completely beautiful way. Both of them are manuals of advice to an emperor. When in Sanskrit, one speaks of the word Chakravartin, it means a wheel Turner. And a Chakravarti can mean either. A completely omnipotent moment. Or a Buddha. Now, this is the extraordinary thing about the life of the Buddha himself, because he is reputed to have been the son of a very, very powerful king. And when the astrologers got together at the time of his birth they said this boy, Guatama, is to be a Chakravartin, the question is In what sense of the word will be a chapter about him. Will he turn the wheel of the world or will he tell him turn the wheel of the Dharma. And his father wanted him of course to maintain the royal dine and turn the wheel of the world. What is the wheel of the world the wheel of the world is the song. The rat race. The squirrel cage. And the wheel of the dharma is this, is the same wheel only, you run along it without thinking you're getting anywhere. When the earth circles the sun, it's not going anywhere. And when you play music. You're not aiming at the final chord. When you dance, you're not aiming at us but a particular spot on the flaw. But if you think, that in the process of musical dancing or whatever that there is some destination at which you should arrive then you are in the rat race wheel the Samsara wheel and the Chakravadin is the master of controlling things. And so in this extraordinary book called the Shastra author means. Citizenship belonging to society what is involved in the duty of social organization Shastra means text that as I'm an authoritative kind not so was Orotate it was a Sutra but nearly.

So, here is this book written. To describe the duties of a man who is a complete tyrant. You've got to be God, you've got to govern, this is your

duty. Somebody has to be elected to be president of the United States. Or whatever by whatever method of election it may be vote it may be birth. And it tells you that if you take the reins of power what you're going to have to do. It's phenomenal this man who wrote it was far more realistic than Machiavelli. And he said. 'From the start, realize that you will never succeed. The road of power is always failure.' But you may have to take that road. It may be your svadharma, you also father out of mark which means your own function, your vocation, what life elects you to do. And you will never succeed at it. But in the pursuit of power this is what you're going to have to do first principle is have no friends. Don't trust anyone or anything. You've therefore imagine yourself living in a palace which is a fortress. And the palace is so constructed that it's a mandala, a circle. Rings within rings within rings, both architecturally and organizationally. And you are the spider in the middle of this Web. In your inner sanctum, you cannot really sleep. You must at best only sleep with one eye closed. And you have guards around you all the time and you have secret gods who watch those gods. You can't really eat, because someone always has to taste the food for you first to be sure it's not poisoned. And then you arrange your ministers and advisors in the following way: every ring, you set at odds with the next ring around it. And you promote discord between the separate rings, on the principle of the Latin saying divide et impera, divide and rule. So that therefore For example you have a very close association of cabinet members who are your immediate advisors. But don't trust them have just be on them some subordinate by those who want to use up their positions and will watch your cabinet ministers for any treachery to expose them and immediately give them away. In this way, you guard yourself against treachery, from the immediate circle and so you do this the whole way out. Then, you plan within the center of this palace, a secret exit. Where you have a trap door and a tunnel that goes down to the river where there's a speedboat waiting, to make an immediate getaway if the should be a palace revolution. But on the way from the tunnel, as you go down, there is a special keystone that you can remove and cause the entire palace to collapse. And shatter everybody inside. So here you have this thing which is very very much like a modern fantasy, George Orwell's book one thousand nine hundred four where Big Brother is watching everyone, the trouble for Big Brother though, is that in watching everyone to see that they don't break the law, he has no time to enjoy himself. Just as this poor guy

who's the mahamaharaja Chakravadin. Talking about him cannot sleep because he's always got to be on the watch. So Big Brother could never take his girl for a walk in the park. He's always got to have his eye glued to the television which is inspecting what everyone's doing is the most miserable of men the spider caught in its own web.

So, the whole theory of political control by imposition of the rule of law from above. Which is alas, the Christian theory of the universe, this is the way God is operating. Do you realize that according to the theology of sir Thomas Aquinas, God is personally aware with his full total consciousness of every atom of existence. That is to say, a mosquito's wing does not vibrate without the entire total consciousness of the Divine Mind. The mask of the Episcopal church opens with the prayer, almighty God under whom all hearts are open all desires known from them no secrets I would. Think of it. Think of having to be occupied with the vagaries of every human mind. Think of the boredom of having to put up with all that. Poor God, the victim of his own power game.

And so the most ingenious man who wrote this Arthashastra showed all this up in the most vivid way. That is the price of power. Now, the gods of the Hindus do not work this way, they do not operate in the manner of the Chakravadin. And this is revealed in the fact that they have more than two arms. When Shiva is depicted dancing the Tandava dance yet ten arms all of which operate individually. Have a look at Tesh but are has one thousand dollars. Have a look at Ashgrove when translated into Chinese becomes quite. Common in Japanese and in the gorgeous sunders sang and though temple of Kyoto there is an image of calm literally with one thousand on come. And surrounded by one thousand replicas, only these ones only have ten arms. And they, eight and each one of them has a eleven heads. This is kind of a spooky thing to us say What is this kind of deformed mission of the human image of? But what it's like is that your body is covered in the vents. And each one of these nerve ends is sensitive as if you were covered in eyes. And they're carrying information through and you operate and you adapt to the world without having to think about it. So it means, that the true power of the Divine Being is that it has one thousand arms, and does not have to cogitate about how to move them. The poem says that the centipede was happy quite, until a toad in fun said prey which leg goes off

to which. This work to mind to such a pit she they distracted in a ditch considering how to run. The centipede operates all those legs, without having to think individually how to do it. Just as you breathe, just as you grow your hair.

So, in the same way the Hindus have the idea that the universe is operated in the same way. That the the Supreme Lord has a one million one thousand watt of arms and each of you is one of those arms. And they they go like that. In the West, with our political-monarchical theory of the universe, God is supposed to know every detail and keep track of it all. So there is a book called The Doomsday Book. The book The Archangel of Judgment and in that is recorded every single thing you have done. So that in the day of judgment you will have to answer for it all. As Jesus said, every hair of your head is numbered. Phew.

And the Hindus would say either lotsa has to get the number. Call it. Call it a Kalpa, call it a crow of kalpas a cochi of kalpas they have these words that express fantastic numbers like we use in modern astronomy. So, if you want to keep track of everything, remember it all, figure it all out. So that a little there will be a day of reckoning, in which we can say, finally this is the truth about what happened. That's a very dangerous idea. And this idea of the day of reckoning is the one idea that can very well destroy the world. Because if you get in a final argument. And say we've got the bomb on our side and you've got the bomb on the other side. And we know that if either one of us uses it the whole world is destroyed. So what's to be gained? Oh, says one side, we believe in the last judgment that beyond death there will be a reckoning when everybody will be brought together on the Supreme boss will line up everybody in front and say now the rights and wrongs of this issue are as follows. And the people who believe that they will survive death in the spiritual world you know, better dead than red, will believe that the Communists will be brought up before the judgment throne of God and that God will lecture them and say that they were all in the wrong and that they it was right to blow the bomb against them. That's the consequence of believing in immortality you see you could actually do it.

So, this idea then that the world is governed. By conscious and personal knowledge on the part of the deity is the politics of money, it is the politics

of Machiavelli, the politics of the Athashastra. Although in the AushaShastra it is quite clear that the writer of the book. Realizes the fallacy of the whole thing. That what he is saying is that if that's the way you want to go this is what you're going to have to do. And that therefore life is an organization that will not work under dominance. It will only work by cooperation so you get the opposite book. The Tao Te Ching. The legend of the Tao Te Ching is that it was written at the request of the captain of the guard. Of what was then the Chinese capital. When the court librarian got disgusted with the life of the court, and decided to retire into the mountains.

The Chinese have a strange love of the mountains. There is always idealized, being able to wander off into the mountains and get lost. One of the lovely poems of the Chinese. Says..it's called looking for the master. 'I asked the boy beneath the pines he says the master's gone alone heard gathering somewhere on the mound, cloud-hidden, whereabouts unknown. And all the old Chinese scholars and poets have this nostalgia. To leave the world in its competition and one upmanship games. Go into the mountains and leave no trace. So Lao Tzu, which means the old boy. Literally, the old boy. When he tired of the life of the court. [He's] supposed to have been stopped by the gate Guardian when he was leaving the guard said. I cannot permit you to leave because you are a very wise man and will be valuable to us so would you please write down your wisdom. For ruling the state and then I let you go. So Lao Tzu said, Yes I will and on the strips of bamboo scratched out the text, which is the most paradoxical book ever written. Because it starts out by saying that I'm a bit that there's a thing called the Tao what is the Tao. Tao is the, is the way is the how-to, is the. The Prince and the is the way of nature is the cause of things. He starts by saying the way which can be described is not the eternal way. And then he goes on to describe it at one point he says those who speak do not know those who know do not speak but yet he speak. He rights the book.

Well now, this book is a manual of advice to an emperor, essentially. It can be read on many levels. It can be read as a mystical book, it can be read as an alchemical book, it can be read as a meditation manual, and equally well as a political textbook. And the the basic idea of the whole thing is that in the art of ruling, you do not use force. You never. Press the issue. And it is for this reason that the the Lao Tzu book is the basis of Judo. In Judo, you

don't use force against your opponent. You use his force, if he uses it against you. You can practically prove that if someone comes to a calamity as a result of a judo thing that it was his own fault. Because the principles of it are like that. There is an esoteric form of Judo called Aikido. And that any I would say any young man in education today should learn aikido. So should every young woman it is a fundamental science. Aikido is the art of being unattackable. Because when somebody tries to hit you you are never there. You simply dissolve you disintegrate you know you're not that a catch hold up. And the curious thing about Aikido is that you learn certain tricks that you can accomplish only if you don't use effort. You can for example learn to put you on Mount straight in a way that nobody can bend it. But in order to do that, you must use no effort. It's the most peculiar paradoxical thing it really freaks you out when you get involved in this experiment and the teacher shows you how to do it the funniest experience is just like everything suddenly became contrary to common sense. But that's all goes back to Lao Tzu, to the imagery that is used of the pine in the willow. Willow tree is springing, and relaxed, and when the snow falls the willow tree droops and the snow drops off the branches. But the pine tree is too tough and therefore has an arm like this, and as the snow falls that piles up and piles up until the branch cracks. So Lao Tzu says, the man at his birth is supple and tender. In death he is rigid and hog.

So suppleness and tenderness of the characteristics of life, rigidity and hardness of the characteristics of death. He likens the functioning of the Tao to water. And he says now water is always taking the line of least resistance. It doesn't strive, it always seeks the low level, which men in the hall because they always want to be on top. But what can you do with water. You can't cut it, you can't injure it, you can't compress it. So he's saying in other words if you want to govern a nation you must behave like water. Govern a nation as you cook a small fish. That means that if, you must do it gently because when you have a small fish in the frying pan if you chivvy it around too much it falls apart. And so therefore he has a conception of the Tao, which is as it were, the exact opposite of all conceptions of God. He says this the great Tao flows everywhere, both the left and the right. It loves and nourishes all things, but does not lord it over them. And when merits are accomplished, it lays no claim to them. It says, the swishing wind does not last out the morning, the pelting rain does not

go on all day if heaven and earth cannot keep these things up how much less.

So he has an idea of the Emperor as an anonymous sort of person. Who is always retiring, who would be in other words, to a political community. In the same way as today, the sanitary engineer is. Now, we have a sanitary engineer who is an official of Sausalito or Marin County. Never would you imagine the sanitary engineer going through town in a great car with a police escort and flags in all directions. Nobody even knows who the senator engineer is and yet he is a very important official. Without him, there would be health problems and all sorts of difficulties. But because he is in charge of the sewers, everybody would say well, that's not very glamorous. Then Lao Tzu is saying, that the the chief official of the state should have the same attitude as the man in charge of the sewers. But the less he parades himself, the more effective he can be. The less that's known about him, the better.

So he says, the energies of the Emperor should be directed to keeping the minds of the people unpreoccupied and their bellies well filled. In other words, let's not have news about politics. That the newspapers be full of interesting things. Not political things. But our newspapers, which are all about politics are full of catastrophes. You open the newspaper and what do you read what is news bad news is news. The saying you know, no news is good news. All news is bad news. They don't say the great things that are going on. Very rarely. You get somebody who claims to have cured cancer or something and that gets a headline. But by and large bad news is the news. So Lao Tzu advocates no news at all. No discussion of politics he says My ideal state would be a small one in which you could hear the chickens in the neighboring state. And there would be no apparent government. It's a kind of anarchy. But of course, anarchy depends upon everybody being responsible when you drive down the highway and you see a rock lying in the road you don't say, oh the department of highways will take care that you stop your car and kick it over to the side. I don't know if you know that book. The power within this. Which is written by. A man it was reconstructing the travels of a Spanish explorer the United States. And he says the evil of Spain is that everybody regards the nation as an entity that exists in its own right, distinct from every individual in it.

And therefore shifts responsibility to that, as if the nation existed, as if in other words the government was something different from you. This is that's where the evil comes from. We say, oh, the government will do it, the government will see to it.

So there is likewise a story in the Bible. That when one day there was a question of electing the king of the forest. And they went to the various vegetables. They went to the oak tree and said You are strong upstanding How about being king of the forest? And the oak tree said I don't have time for such a thing. All my energy is expended in making this god just wouldn't constructing good acorns and I wouldn't have time to be king they went to the vine in the vine said no I couldn't be cute forest because all my energy is absorbed in these grapes, and you will need your wine and so on that I have to do that. And they went all around and finally they got to the bramble. And the Bramble said sure, sure, I'm nothing special do, I'd be most happy to be king of the forest, and so the bramble grew up and strangled everything. On it being there for that. Being King being in charge, is an operation that doesn't work. Now let's look at this from the point of view say, of electronics.

It's primarily it comes down to scanning. Observing, and integrating the behavior of a very complex system. How can you do it? There's a bottleneck. You cannot pass that much information through a single source. Without rendering that single source of observing it incapable of observing it. It's as simple as that. Therefore, if you are going to have a control of an enormous amount of information. It has to be delegated to many scanning units. And you have to trust them all to work together. Because if again you go back and say well then that has to be something that scans the scanners, and see that they're doing their job right why of course the thing that scans the scanners can only take a very general impression of each one it can't go into the details can it.

So, a highly organized system where a lot of detail is going on has to be a system of mutual trust there is no way of bossing it. If you want to have it all you have to have it by letting go and saying to all the units in it come on let's play together. At the moment you come on up tight about them and say. Now, I want an accounting from each one of you. Each one of them

feels a little mean about it and will conceal information and you, if you're going to keep charge of the whole thing in that style of behavior I'm going to have your hands full too full you won't be able to watch it all. So therefore, every organic complexity works by the delegation of authority. Every organic unity is a system of love. That is to say, of mutual trust. That says, thank God I've got you around. I often think about when somebody does something that's marvelous and I think what a relief that you could do that and I didn't have to. All that effort that you put into doing this is so beautiful, and it just relieved me of the necessity. See, and that's the way that the life principle really works. In complete opposition to any idea of lordship. Of all the credit belongs to me.

So it's so funny when in Christianity, everybody ascribes the credit. For anything good that happened to the Lord God. There's a sense in this. But it is not the sense that's usually advertised. When you say it, wasn't me that did it. You as an ego, supposing you've done. You've achieved something great. And you say you know it wasn't my ego that. It was all these myriad little molecules and cells, each one of whom contributed to this extraordinary thing that I did. See, you could go in that way towards infinite diversity and say of everything that you did no it wasn't me it was my people it was all these little fellows who. Each one of them. But in that, to the degree that you go towards the infinitude of the little wants. To that extent you have a true sense of unity. Whereas if you don't give any credit to the little ones and you say oh I just push them around. You don't realize how to put together. So it's this is this is the true in a meaning of the principle of non-duality. That, it isn't just kind of crass unity. Which says all the multiplicity is an illusion. And they're all really one stuff what it's saying is that the truest unity is the same thing as the most detailed multiplicity. Because you don't know, you can see intellectually. You don't know what you mean by unity in this you understand multiplicity. The one throws out the other idea they they balance each other like the back in the front so in exactly the same way the more you go fall. Highly articulate multiplicity, the more you get unity. A living organism with a complicated differentiation of its parts is more united than a piece of rock. Or homogenized milk. It's more of a total working system. You know, you can throw the milk off the floor and it won't reassemble itself. So this is a thing then that the whole idea of the giving in to the other saying. Trusting it to

do it. Trusting. When you want to learn. A certain discipline to control your muscles in a certain way. You have to do this by trusting them to do it that way rather than. Trying to dominate them in say bunk and Sierra's modeless book on playing the piano. All of his idea of developing eyes fill in technique is based on trusting your muscles. And that they have in them an intelligence and you trust them to use their intelligence in manipulating the instrument. So in I was the more you diversify yourself, the more the unity comes about.

So this is the real secret underlying the democratic principle. The notion of what a Republican is, as distinct from a monolithic monarchy where the people cease to trust themselves. And say to an office or authority. Please you take care of this instead. It works exactly the opposite direction. And that direction is the opposite direction of the Way in which all living organisms flow and manifest themselves.

At the end of the question period yesterday, I said we had come to something which I would have to take up today. And this arose because we were discussing the problem of prediction, which is of course related to the problem of control. I had made a passing reference in yesterday's seminar to the fact that the knowledge of time, the knowledge of the future, what Korzybski calls man's time binding ability, is an advantage for which we pay a very serious price. To know the future in a conscious way gives you obviously a survival advantage but at the same time, it gives you a survival disadvantage, so that what you gain on the roundabout you lose on the swings. You gain the ability to plan your future. Say, to invest, to take out insurance, to do all those things that are called provident. But the price you pay for it is anxiety. And you pay this price because you know that you don't know enough. That you know as it were enough about the future to try to be profitable, but you don't know enough about the future to be sure that your providence was correctly done. Therefore you worry. Therefore you are concerned with what will happen tomorrow, and it's so extraordinary that that passage in the US and Matthew's Gospel where Jesus says, don't make any anxiety about the morrow, what you're going to eat, what you're going to drink. And I'm amazed about that because every minister I have ever heard discussed this passage says it can't be put into practice. See the church simply never did teach that that's they they the most a verse of passage in the Gospels which is swept under the carpet see.

In a way of course, Jesus told all sorts of stories in order to make people think. This one this this image of the flowers of the field, and the birds that don't make any plans. And he did another one for example, the story of the Pharisee in the publican. [It's] very interesting, because its effect extremely funny. He says here is the Pharisee, who goes up to the front row of the church and stands up and sort of memorializes God on what a good guy he's been, that he has fulfilled all the duties and so on then there's the public a new creeps into the back and beats himself on the breast and says only God be merciful to me a sinner see? Now having told that story the situation is completely reversed, because then all the prigs creep into the back of the church and beat themselves on the breast and say got develops a hold of me as the nurse and son of the now we would have to tell the tale exactly the other way around, and say now the honest guy is the one who simply walks straight to the front and addresses God man to man.

But you see, what people don't realize in what I would call good movement ship the art of teaching is that the teacher tells tales not for their immediate obvious meaning but for their later effects. What is the result of having told this story? In this story is completely deflated. Fake humility. Where you try to be humble. It's a koan. So in the same way, the bit with the passage on be not anxious for the morrow. Really asks you, 'Why can't you put this into practice?' Here is a precept who contracts, nobody. They say oh it is possible we cannot give up making plans we cannot give up prediction. Of course we predict in a way in a sort of unconscious fashion. The simplest act involves a kind of prediction. So, in this case, we are simultaneously aware of things which if you do regard the present as a hairline, would be called Past and Future at once. But if you are not hung up on the idea that the present is this headline thing which is purely abstract, then you have no problem in accepting the idea that we are simultaneously aware of past events and future events. Because they're all, just like you're watching from a traveling vehicle, and you can see where you're going to be and you can see where you have been from where you are now.

So in that sense then, we have a knowledge of the future, [say] when I move to pick up my glasses. but that is a different kind of knowledge from when I speculate in an abstract way as to what I ought to do a month from now or might might happen a month from now you see. So then, the question then

becomes...we predict those far futures which are not within our present vision. By calculation. It may be astronomical, navigational calculation, or as it was, in old times astrological. People thought they had inner astrology, the means to foresee the future and know what to do. And then the question arises, well, what are the...Supposing there is a fine science of prediction, whether it be scientifically respectable like navigation or meteorology which isn't too hard. Or whether it be something like astrology are these really profitable sciences. Now I pointed out the problem is A, that when you know the future, you pay for it with anxiety. You know, I am going to die. A creature that doesn't make predictions like a cat or a dog, when seeing another dead cat, will not necessarily infer that's going to happen to me. Because you see a true animal, a truly functioning entity, is not self-conscious in that way. For example, you all know that only other people have heads. You don't. Only, how do you become concerned with your head. Why, because you have been made conscious of your face. You looked in mirrors you have been talked about is the only part of our body that we leave permanently unclothed, except the hand even when we put gloves on you know their hands are covered but we always keep the face make it. And you learn that you're there in terms of having a mask see you can touch it. Put a good face on it, lose face, save face, all these things indicates the importance of the face the seat of one's identity whereas inside beyond the face where are you. See if you were living naturally. You would be as unselfconscious as your head is. You know, even than the brain is and is not sensitive to probes and...

So, you would live in terms of all this is going on is you. But you've been talked into the idea you have been smashed back into your head see, by social indoctrination, and your face has been made to stand for you. The real you, behind the face, is everything that you see, and hear, touch and sense. So, the headless man. To have no head, to go out of your head, to lose your mind you see is in a way always characteristic of the wise man. Because he's come back to his original emptiness. Which is behind the face. See, when you turn to see your head, you can't and what is behind the eye, you can't, it's not dark. It's not light you just can't apprehended in any way at all. And that's what it's all about. But so then, when you start calculating, and you resort to a prediction, you are now trying to get hold of all of us. But many people have an instinctive feeling say when confronted with a

great astrologer who could tell them all the future I don't want to hear it. I'd rather not. And this is in a way a wise, if uninformed reaction. For the simple reason...well, let's put the other point of view for a moment another point of view would be a realistic person saying the trouble with you is you don't want to know your future because you're afraid of life. If you were know your future, you could take practical steps to adapt things to it. If you knew you were going to die next Tuesday, you would immediately put your house in order and make less trouble for your friends and relations. Face it. Yeah, that sounds all right to begin with. It's like all technology is initially a success. But the real problem kindly comes to is this: When the outcome of a game is known, the game is cancelled. Because the whole point of playing the game is that we don't know the outcome. Because, the known future is already past. And the higher the degree of certainty of knowledge as to the future, to that extent, it has happened. You've had it. And that we don't want to put the future in that situation, not really. Because the how you see if you think of the cosmos as basically a game of hide and seek. Where the lord God is creating the universe, by forgetting that he is God and imagining that he is you. Then this is the fundamental way of getting rid of the eternal boredom of knowing all about it. And of there being no surprises. The whole, the whole vitality of being alive is that it is always surprising. To be enlightened is to be surprised at everything. That it is a wonder that it is everything is a miracle, that it is highly improbable and really shouldn't have happened at all but there it is, you see. If there isn't that sense there is no vitality in anything. But again of course we have the problem that I discussed yesterday in another form the problem of order and randomness and the drawing the line you see. Where to draw the line between order and randomness so in the same way where to draw the line between the known and the unknown how much to predict, how much to say well, I'd rather leave tomorrow to tomorrow, sufficient unto the day is the trouble.

So, you see again it is all a question of where to draw the line, of how much to control and realize that when you go beyond a certain degree of control when you go beyond a certain what I will call natural prevision, such as I described by the analogy of looking out of the window frame. When you go beyond a certain degree of natural prevision, you would encounter a law of diminishing returns that the more you succeed, the more you fail. And then

if you get into this sort of, I describe it yesterday from the academic point of view. When scholarship, acquires an exactness, and a highly detailed degree of information that constitutes an information bomb, and nobody can keep track of it and the whole thing becomes a bore, who wants to keep track of it any longer? Who gives a damn? You know, about those final details of Shakespeare's use of the conjunction.

So in the same way in practical politics, we have reached a state today, where law is out of hand. Because it is too meticulous. There is too much paper, there are too many whereases, if ands or butses, subclauses and so on and nobody could keep track of it the whole thing is in a state of total confusion and this confusion exists in the name of sanity in the name of trying to set things in order because everybody shouts when somebody does something wrong or ought to be a law against it. And soon there is indeed a law against it, there's a law against everything we are all at this moment doing something illegal I don't know what it is but it's always there and somebody can find it out and invoke it if they wish to make trouble for us. I'm quite sure that my entire situation is illegal. And so for everybody. And this is the result you see of wanting to pin everything down. In ancient China, could the Confucians have a thing they call the rectification of names. And they were, the Confucians are curious people because while they have some marvelous ID. Years there's a certain lacking in humor. And they're rather ponderous and puritanical and stuffy. The Taoists, on the other hand have humor and are always making fun of the Confucians. Now, the rectification of names was that Confucius said we must be sure when we use words that their meaning is established. So this means the dictionary. And so they were they were the first real serious thinkers about dictionaries about definitions about laying down what the words mean, but the Taoists pointed out by saying if you are going to rectify the words, what are you going to rectify them with? Well, they said, with words well then they said what are you going to how are you going to rectify the words you used to rectify the words. Well they thought about that, and then they said well, their words are self-rectifying that is to say, you rectify words with words and the words you use to rectify the words are rectified with the other words. It's a closed circle. So you can play a game called Vish, in which you supply the players each with a copy of the same dictionary. And then you have a lots of words written on the slips of paper and a hat and

somebody pulls a word out of a hat and everybody looks it up in the dictionary. Then they take the definition and they look up a key word in the definition. And look that up and so on until they get back to the word they started with. The first person to get back to the word that everybody started with calls out Vish, short for a vicious circle. And then there is an umpire present to rule on whether they cheated, in other words whether they looked up, when they saw our knowledge to, to records on looked up the word to instead of the record or observe or whatever. So the dictionary only gets out of a vicious circle when there is a picture beside the word. Then it escapes. But otherwise all. Attempts to pin down words are simply going in a vicious circle.

So, one uses words effectively. By not trying to pin them down too hard. But we are always saying, 'Put it in writing!' If we're really serious about an agreement between two people, put it in writing. Because I can trust the document but I'm not sure if I can trust you. Do you exist prove it have your birth certificate a passport a card of identity. If you can produce this wretched piece of paper you're there, if you can't, you're not. Well obviously, it was a good idea to record certain things so we could be sure that people wouldn't be dishonest. But all this started from people being dishonest. And it if we are going to stop people from being dishonest. There's only one way to do it. And that's for people not to be dishonest. No other way that has ever been invented will prevent it. And if you think you can go on living by preventing people from being dishonest with you by rules and regulations and laws and policeman and all this kind of thing, you eventually, you succeed in the short run. But once again, in the long run you run into a total tangle. United States of America is the country in the world with most laws. And yet our police are completely mistrusted by every sane person. They're crooks and scoundrels, and the violent fascists a kind of people. With exceptions you know, everything has exceptions. A sort of nice cop on the corner. But by and large through all. The state in which say people say oh well the law will take care of it. The law won't take care [of it]. You have to take care. And you can only be a law abiding citizen by trusting your fellow man. And if you don't do that, no one will trust you. And therefore a system of mutual mistrust will exist, which of its very nature must fall apart and it cannot operate. So once again, you see, this is a quote problem of the confusion between physical reality and symbolic

reality. The law says this, therefore it must happen. And if it doesn't happen somebody is there with a club to see that it does. Maybe, unless you wangle out of it conceal it, find a loophole in the literature. Get a good lawyer, that means a man who can say that the law didn't say what it was intended to say. So that then of course, everybody is accountable and that means keeps accounts. And I am increasingly fine that it's difficult to operate. Because of all the records that have to be kept one spends more time recording than one does doing. So, this is to say that that be the symbolic method prediction, recording, all prediction is based on recording and on like you take that a graph of the movement of air of a stock or of anything anything you want to graph and then you establish a trend to see where it's going. So, recording is the basis of prediction, but if you go into this beyond a certain point. The process cancels itself out because it's no longer worth doing. So, the wonderful Jewish idea of the Year of Jubilee. You know, when all debts accounts are cancelled and pff... begin again. That's what we need now we need a new chemical or you know like people talk about putting nerve gases in the air which will immediately paralyze the enemy. What we need is a gas that will destroy all paper whatsoever. I wonder what would happen. I've often thought about it, even though I depend for my living to some extent on paper, writing books. I think on the whole the benefit to humanity from the complete disappearance of paper at this point. Wouldn't have been true or perhaps at some other time. But now I think that much would be said for it and it would have to include plastics celluloid film and all its other things well. [audience question] Yes, all recording to disappear. In other words the book of the recording angel is to be eaten up by God.

So this is the thing. Now...that's of course, please understand I'm being somewhat facetious. And this mustn't be taken quite literally but it is saying that at this point. You look at look at a book a group of tourists. I take people to Japan every so often and the Japanese are absolutely weird about this wherever you go the tourists the Japanese everybody they carry cameras. And they're the very nice to have a camera and photography is a fine art, yes. But there's a certain kind of people who never, never look at anything except with a camera. They go around capturing reality in this box. And there was one man who was a magnificent photographer who came along with me, who never did anything but photograph. And he was always late and dawdling behind the other people even though we moved at

a very leisurely pace because he was interminable photographing, photographing, photographing capturing the world stock making a still see with this box. A movie is simply another kind of still it's a more complicated kind. So the clutch box you go around with as a result I find that people do not relate to the environment. The only thing that you should ever carry when you're scrolling is a staff or a cane to help you climb. Your hand should otherwise be completely free of encumbrances. So should your eyes and ears and everything, then it will really happen. But otherwise if you go around with a recording instrument all the time it won't happen. The only good recording instrument would be one that you were completely unconscious of. That you didn't have to focus and flip and study, instead of looking directly at things that were going on participating directly with people in social relationships. So in the same way, when you will have a not being just a tour, where you're seeing wonderful landscapes and works of art and antiquity. Also when people have very good times they have a picnic at the beach and it's delightful, some says oh someone should have brought a camera. To prove that this really did happen. But what happens instead nowadays when somebody gives it a great party and all sorts of people are invited they are sure that the society reporter comes from the press. And then they can read about it in the paper the next day and look back and say now that really did happen it's in the papers for the same way a young adolescent who feels that he doesn't really exist commits a crime in order to get his name in the papers. There he'll be headlines as a great hero and villain. And he'll know he's there he'll be recognized. It didn't happen if it wasn't recognised therefore, as some very bright person pointed out of the while ago, we have many pseudo events events that are created for the sole purpose of their being reported in the press. Like life goes to a party you remember those things. All those parties were organized by stuff of people who came out from Life magazine and said this would make a good party. Let's set it up this way and they'd get various people to cooperate and it's all there and they have the party. In the same way, publishers instead of looking around for creative authors think up books then they find a hack to write them. They say this would make a good book. And it's a pseudo book. And non-book. There's all kinds of work done like this. Foundations invent projects, pseudo-projects, because instead of you see what happens is that. Instead of going around with a kind of field staff, looking for what artists and scholars and people actually doing that is creative. They stay in their

office, and they get masses of applications come in there which are too boring to read. So far they sit around think up what would make a good project to give all this money to and. Then they think up a project then they go around and try and find people to do it and all those people they find are frustrated Ph D.'s from Harvard and elsewhere, who are sort of academically competent, but don't have very much on the ball. They have to be told something to do investigative it, research. So it's the same principle, all along, of allowing the recorder, which translates life into a system of symbols to predict the future for us. Then it makes us anxious, you see how the vicious circle operates, and having made us anxious, we turn back to it and say you solve this problem we don't want to be and we want a full proof system right back to the recorder back to a closer study of the symbols. How can we out-wit the future. The doozie. It's at and that complete vicious circle the more it succeeds the more it fails, the more you are quite sure where you're going and of the plane won't crash under any circumstances. Well, by the time you can travel from here to anywhere in the world in an absolutely assured one crashed plane. There will be no point in taking the journey, because the place you will go to will be the same place and started from at least it will look exactly like it. And furthermore, it will already...that journey, in the completely full-proof plane. Because it is absolutely planned. You will have already taken [it]. That's why the place you are going to will be identically the place you came from. And so who will then pay for the airlines by travelling on them? Nobody will. There has to be the risk in it, for there to be any point in taking it.

So, this is the most important thing for all technologists to understand. That technology is a process. Like cooking, like polishing, which you must do for a certain time and then stop. Then it's done, it's ready. It's created. But if you keep on keep on keep on keep on you'll you know supposing I have somebody I love very much and I'd like to stroke her. [It's] very nice to stroke her, but if I keep on stroking can I rub a skin off. Up to a point it's fine to see, but beyond that, too much. And so simple I mean I feel like I'm talking in platitudes. But this is a thing that people have said to neglect it when it comes to technology, when it comes to law, when it comes to the whole philosophy of prediction.

The Future of Communications

This is part of a series of seminars on the future. And, last weekend, we were discussing the very nature of time. And I want to give a sort of summary of what we were talking about before going into this particular weekend's discussion which is the future of communication. Last weekend. We discussed, the idea that history, the notion of human life as a kind of progressive system that is beginning from the old, the primitive, the worn out, the stupid, and going on progressive led to greater and greater attainments the wise the good. The successful and so on. That this is a very dangerous illusion. That in so far as we feel we are participating in and improving human life through the course of history, we are actually destroying ourselves. Because everything that so far, through technology and through the accumulation of human skill, we call the increase of our powers, is leading us to destruction. Not because technology in itself is a bad thing. But because the spirit in which it is used is a spirit of man against the universe, man against nature. And man has to realize, that he is an integral part of nature. That he is just as much a natural form as a seagull or a wave or a mountain. And if he doesn't realize that he uses his technical powers to destroy his environment to foul his own nest.

And so when you look at a great modern city like Los Angeles. And you see the. Absolute ruination of what used to be a very lovely natural scene full of citrus trees and sunshine now turned into ways smoggy slum. So the Los Angeles-ization instead of civilization, of the world is the result of having a sense of our own existence. Which is contrary to the facts. And that is to say. We are all trained, by our parents, teachers. By our peer groups. To experience our own existence. As an ego. In a capsule of skin. Confronted by an external world which is not ourselves definitely not. And that this external world is something that really threatens us because we've been brought up to the idea that basically it's a mechanism it's a stupid unintelligent manifestation of energy. Right out in the father's galaxies it's nothing but fire and gas. Nearer to us it's nothing but water and rock. And it's full of buzzing insects and. Other organisms that are inferior to the human status. And therefore something that's not to be trusted at all and we have been brought up with the idea that we come into this scene. As if we will complete strangers to it. We're born by an accident of bad rubber goods or something like that. And we arrive in the US. And confront it like that see what's outside there. And this is a hallucination. All this is a complete.

Fantasy. Official people in psychiatry complain about the hallucinatory States induced by L.S.D. and so on and so forth but they are nothing they are nothing in their hallucinations compared with the hallucination of being a skin-encapsulated ego. One is not that. For example, it's a very very very simple a human being exists by virtue of living in a world where there are plants. Where there is air. Where there is water where there is some and that temperature. And plants imply insects and grubs. They can't live without them. And grubs imply birds. And birds imply fish. And so on and so on it all. It all fits together, so that you are patterns every every living organism is a pattern of something which is inseparable from the pattern of everything else that is going on. So that you could say you as a living human organism are something that the whole universe is doing at the point of space and time which you call here and now. You are not separate, you flow into all that surrounds you in exactly the same way that your head goes with your feet. See, they're inseparable, when you were born, you weren't put together like one constructs an automobile. Screwing on this bit and screwing on that bit and so on. You beautifully grew head and feet together, all of one piece. From your mother's womb. And in exactly the same way, that your head and your feet are related together so you go with you I want to get this word into the English language, go with instead of cause and effect. Instead of that mechanical understanding of the world which was Descartes and Newton they thought of the world as billiards, you know, you hit a ball and it goes [clicks]. And it's that ball like that is in. And they thought of cause and effect you don't need to use that concept at all. Go with just as a front goes with the back just as a top goes of the bottom doesn't up goes with down. There in the operable. So in exactly that way you go with. Everything that you call the external world.

And therefore you have to treat the external world as if it were as much you as your own foot. Or your own head. It's part of you. It is you. There's no way of separating, therefore you have to be very kind and reverent and respectful to the mountains, to the forests and so on. To the water to the fish. You for example, live on fish just as birds live on worms, and if you kill any creature. In order to live, you have a duty towards it. That is to say, you must not exterminate the species on which you live. People have, for example, in the whaling industry they have practically exterminated whales. And it's become a very serious situation, because you must farm, cultivate

every species on which you feed. If all worms were to be eaten by the birds, the birds would have no further sustenance. From the worms point of view, if all the birds were to vanish, the worms would overpopulate themselves, and starve themselves. So the worms depend on the birds, just as much as the birds depend on the worms. So we all depend on the whole interaction, of the system of biology. It's a mutual eating society. You may say that's too bad, you know, that life has to involve this crunching and crushing and annihilation of other creatures, but that's the way it is. And therefore, if that's the way it is, the way to do it properly is number one; to farm, instead of merely destroy. Be assured that the species you feed on is maintained, that it goes on. Farm the whales, don't just hunt them. That's the first principle.

The second principle is, whenever you destroy a living body for your own maintenance, give it the honor of cooking it as beautifully as possible. A fish that has died for you and is not well cooked has died in vain I'm quoting Lin Yutang. So this is the situation in which we find ourselves life is a system in which organisms, by mutual eating, transform fish into people, grass into people, lettuce into people, cows into people. What about people? What are they transformed into? We are proud to proud and we try to resist our transformation into some other forms of life and therefore we have a wretched profession the morticians otherwise known as undertakers who try to embalm us and preserve us and put us in concrete barriers instead of letting us simply join the biological rhythm actually watch it. Happen when a person is dead is that they should be buried three feet underground with no casket, nothing, just naked in the earth. And that field should be allowed to lie fallow for some years. And then it would be beautifully fertilized by human bodies and crops would grow out of it.

They always say that the best wheat is grown on old battlefields. But you see, we resist that. And the morticians will put an ad in with some girl who's lost her husband looking out of the window on a rainy day. They say, trust us, he's not rotting really, you know, we've got that concrete thing we've got that extra special covering that super bombing and the corpse is still there. Baby don't worry. You know, how mad can you get? How insane, how ridiculous. The root of this kind of disturbance, of feeling that

you are separate inside your skin and not simply all one process with everything that's going on around you.

The root of this is a failure, of communication. Now, if I want to talk about communication. One of the funny things that occurs to me straight off is that the subject of communication, is really the same subject as life. Life is communication. But let's take the subject of advertising. Life is advertising, because the moment- What is advertising doing? Advertising is trying to promote somebody is game somebody is existence somebody is biological reality because he's maintaining himself by selling something and he advertises it so as to sell it so one could say that all life is advertising. Everybody advertises himself and some way or other.

Or take another subject, strategy. Military strategy. All life can be seen as a form the strategy. Any major department of Human life that we classify we can call it business, we can call it strategy we can call it advertising we can call it communication but we can see all life as that. How then are we going to define communication as a particular human activity as distinct from other activities how what is the difference between communication and architecture? What is the difference between communication and playing on the stock market? What is the difference between communication and football? These are very very difficult things to define, because there is no difference. Football is a form of communication. Sex is a form of communication. There isn't anything that we do that isn't a form of communication, and therefore you may say why talk about communication because it's everything anyhow. So, in order to define the field I'm going to talk about communication. More narrowly. Communication is language. Communication is, the world of symbols. It's true, sexual intercourse is a form of communication, but I'm not going to include that sort of activity in what we're going to discuss. What I'm going to talk about is the way in which human beings use noises like words and symbols like numbers, to represent the things which go on in the material and physical world. If you take a glass of water. And you drink it, and you taste that, you see, that is an event in the physical universe, but the word water is also in the physical universe, because it's a sound. But that particular sound water is used in a way that is peculiar. It is used to represent that transparent liquid that you drink.

So alongside the physical universe of people and everything that's going on, there is another universe that we have invented, of words and signs and numbers that represent. The physical world. And we are very very preoccupied with this symbolic world. And we very often confuse it with what it represents. This is especially true in the United States of America. This is a country and nation a culture which is devoted in a most peculiar way to symbols. Not so long ago, the Congress of the United States voted very serious penalties against anybody who burned or mutilated the American flag. That same group of people is responsible for burning and destroying the physical landscape and population of the United States of America. They will not properly resist the depravities of lumber companies who are destroying the redwood forests. The watersheds. The industries who foul our streams, deprive us of all water. Poison the air. That's all fine, just so long as you don't destroy the flag. The flag is the symbol, only the symbol, of the physical country. Of the day instead of protecting the physical country, protect the symbol. In the same way exactly, people confuse money with wealth. Money is paper, is bookkeeping, is a useful method. Of avoiding the inconveniences of barter. But money has become something to possess in it's own right. To have more money than you can possibly need, you know, the joke about if somebody gives you a million dollars on the condition that you spend it all in one day what would you buy with it? And you are certain things that are excluded, like you mustn't buy an enormous real estate thing you just have to spend it on things that you could use. And it's a very difficult problem as to how you would spend a million dollars in a day. Think it out realistically. But when you get this obsession with money as a reality as if it was something that actually was desirable. You get an entirely hallucinated population of people who simply don't know what's good for them. And are as shall we say intoxicated, addicted to money as if they were all on heroin or opium. This is the confusion of the symbol with what it's supposed to represent. So then, let's inquire carefully into the origin of all this, because before we explore the future of communication, through symbols, through words, we've got to look a little bit at its past. At some point in the development of mankind, and nobody historically knows how long ago this is, we invented we developed two things. One of them was the ability to scan. To pay attention. To use our consciousness in a focused way. In other words, to notice what's going on. Ordinarily, we depend to an enormous extent on a

kind of consciousness that doesn't notice. That is to say, you're functioning all the time. Breathing, beating your heart. Even driving a car while you are absorbed in conversation with your friendly passenger. You're doing an enormous number of things very well indeed without noticing what you're doing. Your entire physical existence as a matter of fact goes on and maintains itself without your noticing anything about it. So your faculty of noticing is, has the same relationship to your total organism as say, on a ship, the radar is scanning, scanning, scanning the environment looking for trouble. That's all it looks for for another ship that it might collide with for a rock for the proper entrance to San Francisco in the middle of the fog. That's what the radar is looking for. But besides the radar there are all kinds of things going on on a ship. That are much more fundamental and essential to it.

So in the same way, in the human organism, we have a radar, we call it conscious attention. And we are constantly scanning our environment and noticing this and that as to whether it is advantageous to us or disadvantageous. But that's only a little frippery on the top of us. Useful, yes. But it's not you. The real you is the you that is beating the heart, shaping the bones. All that. And we have learned you see, by a curious social process to identify ourselves, our very selves or what I say is the real me we've identified that with the scanning process. The little radar job, instead of identifying it with the whole total organism. And therefore we are estranged from our own bodies. And by virtue of being estranged from the body, we are in turn as estranged from the physical environment of nature if you understood if you really clearly realize that you are your own organism. You would at the same moment feel because your organism knows it that you will one with your environment. This organism is related to the world outside it, in exactly the same way that say a whirlpool in a river is related to the river. Everything outside you, is sort of creating you, by flowing through you and human-ing you, bodying you, just as when the river moves it whirlpool. And then goes on.

So the entire physical universe is people and all around here. But conscious attention doesn't deliver that to us as an experience. Why? Because conscious attention or noticing, is a function of consciousness which is separative instead of unitive. It analyzes, instead of synthesizing. I don't

want to by saying the sort of thing to put it down and say it's a mistake and something that shouldn't have happened. It's a very beautiful function. Provided, provided, provided, it doesn't and I have date and distract us from seeing the world synthetically, as well as analytically. In a mirror you can see many images all different clear and distinct but underneath the difference of images there lies the pure silver of the mirror.

So in exactly the same way, seeing all the details clearly analyzed, we need to remain aware of consciousness itself, of awareness itself. Just as for example, all galaxies, all physical bodies exist in space. What do you think space is? Most people think space is nothing space however is you. Space is consciousness, space is the mind. Space is what you call self, me, that's space. and it includes everything. But you can so easily forget it because conscious attention ignores every stimulus every input message that is constant. It rules it out, it says that doesn't make any difference. I'm looking for differences because I'm on God for what might threaten my existence that from looking for a change in the environment I'm a troubleshooter.

So if you identify yourself with consciousness you are constantly anxious. What's going to happen? Is it going to work? And I on the spot you see everybody is like that. But the real you is relaxed. It really doesn't care about that it's got this little function up there that tells it you know on the whole Whether that it trouble going to happen. Really inside you deep down your harmonious with your environment. And it really doesn't matter whether you live or die. Because the whole system goes on anyway. And that's what you are. So whether you, as a specific example of the system, go on a little while one year to year three years, fifty years, hundred years, it doesn't really make any difference. If you want to play it, in other words if you want to put a gamble on how long will you live. You want to gamble on fifty years more or how many years from all. You say by gambling on it you put importance on it you say that's what I wagered on that's what I want to do. OK. But that's, that's your game. It doesn't have to be that way.

So what we have then is a situation in which, by the ability, to use our radar to scan ourselves and the world around us. And to notice features of this universe. We notice these features by being able to put symbols on them.

You notice the face as something distinct from the knees by being able to call it face. And call needs knees you do not have the capacity to notice these different features of the human body without being able to assign some symbol to the part that you notice. This is absolutely crucial. Noticing and language go together. Noticing is the same thing as what we call notation. Notation as in music symbols little signs to identify sounds on the scale. Words to identify bits of the world. Numbers to identify how many bits. All this goes together, so to attend, to concentrate, to watch, to be aware in the way that a spotlight focuses on the surroundings. This goes hand in hand with symbols. One uses the world of symbols the world of special noises. Not like ordinary noises, not like the sound of the wind, not like the washing of the waves but the noises made by speech. To create a separate almost separate world of noise forms, which of course we can think silently in our heads sub-vocally, as thought forms, they're all the same it's forms of noise forms of vibration used to stand over against the world of ordinary direct physical experience. And represent it. In a clumsy way. Clumsy yes clumsy because conscious attention, as a scanning thing as a spotlight roving over. Would do or however fast it goes to get addicted if you to get it to get it all around the I watch you if somebody measures where my eyes look, it can be done. They will see them dancing over you picking out significant points. But that way of looking at life can only comprehend what's going on in a very clumsy way. Because the actual physical world is an operation where we would say, uncountable, innumerable things are going on all together, everywhere at once. And so we say what a complicated world we live in.

Now actually, this world is not complicated at all. It is perfectly simple, it's only complicated when you try to think it out. That's what it means complicated the word complicated expresses a relationship between the physical world on the one hand and on the other a scanning system which is trying to understand and represent in symbols the physical world bit by bit as for example if we would talk about it.

So when you try to talk about the world it's a complicated world, but only because you're trying to talk about it. In itself is not a bit complicated. The human body is a from the point of view of surgery and physiology. Infinitely complicated. It's networks of veins and nerves and so on is

absolutely extraordinary but we say these words extraordinary and complicated because we are confronted with the task of trying to translate this body into language. And language is a very clumsy, it's like if we would say we would move the Pacific Ocean into the Atlantic Ocean with a beer mug. It would be a very complicated thing to do, because we'd have to take it mug by mug across fly them across by a jet plane and dump them in the Atlantic. Very complicated. But that's what you do when you think about the world you take thing by thing, fact by fact idea, idea and it's light beer mug up to be a mug of water going from the Pacific to the Atlantic. And then we say it's complicated it isn't it's only if you approach it with a certain method then it's complicated, because you insist on that method. And you say well that method is me. I am the method of taking in the world bit by bit but that's a hallucination, you're not. Each one of you includes far more capacity than that narrow method of taking in the world bit by bit. Because every nerve end in your body is alive and aware, every organ is functioning without your thinking about it, and that's you. So because we are, have a narrow down idea and conception of ourselves as purely the conscious scanner, we've invested so much emotion in that we've invested so much of the feeling that that is what we are, that we are completely miserable and tormented.

Our communication system therefore, is constantly exaggerating or to use the word in its very correct way, aggravating. To aggravate means to to make it worse. It is aggravating all the time, the delusion, that we are separate from the world. In other words, communication as we are using it is a form of non-communication, it's a way of cutting ourselves off instead of actually communicating. The more we talk, the more we think, the more we ideate, the more we separate ourselves from each other. Identify you as you as you, and you're a Republican you're a Democrat you're a beatnik you're a hippie or a this that and the other thing you're a square or whatever the more identify you you see in these. The more I don't feel that you are me you really physically are many all of you each one to everybody else is like a dewdrop on a spider's web in the early morning which contains in itself all the reflections of all the other dewdrops. And we really relate to each other like that. But in language, in communication, we all put ourselves apart as separate entities, and believe that. So the more we go on with this, the more we have divided up the more we quarrel, the more we

don't understand how to cooperate. So here we start with this paradox. Communication which is related to the word communion common what we have together. Communication is separation. And the more we talk, the less we understand each other.

So then, it has been said that our modern systems of communication are an extension into the external world of man's nervous system. Telephones, telegraph, radio, television: all this network of electronic devices is extending our nervous system in the same way as a wheel extends our feet. But consider the problems that are arising out of this. The extension of the nervous system, electronically, means the end of privacy. As if all your interior thoughts were to become instantly public and available to everyone. Or, conversely, as if your so-called private self were to become a shared self. Let's think of it, first of all, in the worst way we can think of it: the inconvenience of everybody being able to barge in on us by telephone. Double that inconvenience, triple it with the inconveniences you can imagine for a future technology where you not only have the sound of the person's voice on the telephone, but also their visual image. It can be so worked out, technically, that everybody can be equipped with a little gadget about the size of a pocket watch. On one side there is a dialing system and on the other side there is a little TV screen. And everybody in the world who possesses one of these things has a number. And if you ring it and the number doesn't answer, your friend's dead. Imagine. Because you can't not answer. That would be unethical, that would be inhuman, that would be to advertise yourself as dead. You must answer.

Or else a busy signal. Have you ever thought about busy signals as a method of self-defense? Because we do it all the time when we, say, somebody asks you to do something you don't really want to do, you excuse yourself on the grounds of saying, "Well, but that day I happen to be busy. I have work to do." Even if you thoroughly enjoy your work—like for me: all my work is play. But I can say to people, "I have to work, I'm sorry." And I feel slightly dishonest and I don't know what to do about it.

So then, imagine, then, this situation where we have the huge electronic intercommunication so that everybody is in touch with everybody else in such a way that it reveals their inmost thoughts, and there is no longer any

individuality. No privacy. Everything you are, everything you think is revealed to everyone.

Well, now. Let's go into the history of this: this idea of privacy. It's been—for a very many, many centuries—a belief of Western civilization that there is God, who knows everything that you are. The mass in the episcopal church begins with a prayer: "Oh almighty God, unto whom are all hearts are opened. All desires known and from whom no secrets are hid." That we have lived centuries now before we—now, in this modern age, who don't perhaps believe anymore in this monarch God—but before us (our grandfathers and our great-grandfathers and so on) all believed that there was a reference point called God to whom every single secret thought that you had was an open book and was watching it all the time. Because, according to St. Thomas Aquinas, God the Father creates the universe by knowing it. In other words, you see a flag flapping out there, which you would say is an insignificant little rag on a pole. But, according to St. Thomas, that rag flaps there only because God, with his entire infinite energy, is concentrating on every single molecule of its being. And by virtue of that concentration, it exists.

So God is an every which-way intellect that penetrates everything, that concentrates on everything, and only because of that does the thing exist. So when your thoughts move in your brain, they do so only because the Lord God Almighty is supporting them. When you say, in the Creed, "Pistevo is ena Theon, Pat panto panta pantokratora." Pistevo: I believe in one God. Panto panta pantokratora: the ruler of all things. The pantocrat, not the aristocrat. The all-ruler, who therefore is in charge of everything that happens. Every happening is an expression of the divine power. But you, as an individual, are privileged with freedom to use the divine power any way you want. You can do evil with it or you can do good with it. This is the Christian doctrine. So that when you do an evil thing—when you slit a baby from end to end and eat it—you are doing so with the power of God. But you have gone against the spirit of that power, even though it supports you in doing it. Now, that's the idea.

So what I'm—I'm just bringing up this point to show that the West has had for centuries the idea that there is no real privacy, because God knows

everything that you do. And we've accepted that. And what we don't want to accept is the idea that our neighbors know what we do. But let's suppose we have a situation in which we know all our friends are listening, and all our non-friends, and there is absolutely no way of concealing our inmost thoughts from general inspection. What does that do to you? What does it do to you? Can you control the way you think and feel inwardly? What would happen, in fact, if everything were exposed? One thing would be very obvious: eventually, after attempting to control your thoughts and stop certain thoughts from happening, you would say, "To hell with it! I'll think just the way I feel like thinking and be damned. The public be damned." That's what you'd do. Everybody would have to do that. They'd have to do it in mutual self-defense. Do you see how this would release everybody? If we all could interpenetrate each other and know each other through and through, we would forgive each other all our sins. So don't be frightened of the notion that there may come a day when everybody is mutually bugged with microphones and everything so that there aren't any secrets.

Why have secrets? Why have secrets at all? But the moment you overcame the notion, you see, that you have to be defending yourself—when you've overcome that, there'll no longer be any need to defend yourself. Now, what we're afraid of, you see, is that some power will control all of us by this method. But that power, whoever is the controlling agency, must (in the kind of Nineteen Eighty-Four Orwellian horror) be the one individual whose thoughts are not public. If the super-controller has his thoughts public, then he can't be in that position.

So the horror-idea is: if everybody is circuited so that his private thoughts are public knowledge to all his friends and relations, and to the controller, but the controller's thoughts are not public knowledge, then you have a system which is a real dangerous kind of dictatorship. But if there are no private for anybody at all and we're all hooked in on the system—all plugged in—then everybody will look at each other and say, "Oh, haha, come off it!" And we'll all be free to be our inmost selves because you will recognize that everybody else is as much a rascal as you are. And we'll forgive each other because we'll understand that that is simply human nature.

This is so often the case. Somebody goes to a psychotherapist because they have some kind of sex problem that is absolutely weird—or at least they think it is. You know, they want to chew the tip of a woman's high heel, and this, only, will give them an erection. So they go to the psychiatrist and say, "I have this very strange problem." And he says, "My dear fellow, do you realize I have forty patients with the same problem you have?" Which is a great relief, you see? He's found out that he shares this. So this same sharing of our minds—which might come about through super-electronics—would (provided there is no one who is able to opt out of the system and say "You don't get my thoughts on it!"). So this is a parallel of what we're doing already: that every individual has his secret, has his privacy and, to a very large extent, identifies himself as an active individual by virtue of having that privacy. And at the same time, what he mostly has in privacy are things about which he feels guilty. They're his sins.

Sin and privacy are really the same thing. Because when you go to the confessional in the Catholic church and whisper your sins to the priest, you're in a box—a private place—and the priest has a rule that he will never, never, even under the threat of torture, reveal anything anybody has confessed to him. It's called the seal of the confession. So, in this way, we feel that our individuality depends on our privacy. And privacy and sin are really the same.

Now, everybody who is at all sensitive likes to be alone. You like to be able to go out on a sailing boat all by yourself and float in the middle of the water, or climb up the mountain, or go into the air, or just retire into your own place and relax in loneliness. But I want to make the point that loneliness—in that sense—and privacy are quite different things. The privacy of having a secret in you that should not be revealed, that's just a silly joke. In other words, we all know perfectly well that Jesus Christ had to go and excrete, although no mention is made of it in the Gospels. There are a certain kind of people who, just because that wasn't mentioned, drag it out and will draw cartoons of Jesus sitting on the toilet. Like Paul Krassner in *The Realist*: he loves to bring out this side of life, you see, where idols are debunked by being shown up as, after all, human.

But that kind of humor, that sort of sick humor, can only exist in a community where, indeed, there is a peculiar self-defensive privacy, and where we base our individual existence upon secrets. And this is why, of course, clothes—as I mentioned earlier today—are of such immense importance to us as the masks that distinguish us. In a nudist camp everybody is kind of depressingly equal. And you have what you have. If you're young and lucky and strong, you look beautiful. But if you're old and saggy and not much, you look like a kind of a wet potato. So, in order to show that you are more mind than body, that you have something in you that isn't just this flesh, you express yourself in clothes. Great, great, great, wonderful. But everybody with X-ray eyes knows just exactly what you are underneath all that.

Now let's take the X-ray deeper and read your thoughts. What kind of a going-on are you? And at first you say, "Oh God, listen to those person's thoughts. How boring. Why couldn't they be more interesting than that?" Because, you must admit, that the ordinary train of your thoughts is pretty dull. I often think what God must feel like when he has to inspect the ordinary train of thoughts of all these millions and millions of people. And they can't do that thinking without his being completely aware of it. And just think what he has to undergo! Ugh! But when you look deeper, underneath the conscious thoughts, and you see the fantastic convolutions of the organism which is responsible for this thinking, the marvelous structure of the nervous system and the brain: that becomes really interesting.

And yet, you see, here most of us are. We're all, from the point of view of our organic structure, we're miracles. We're absolutely... we're more beautiful than any kind of gem. Any work of art ever conceived. And yet we preoccupy ourselves, use this instrument—it's like using a Stradivarius to play Chopsticks or something like that, you know? [Whistles] You know? Use a Stradivarius to play that. And that's what most of us do with our organisms. And we think that's terribly important; so much so that we keep it a dark secret from everybody else.

But now, the moment (you see) we're all public to each other and there are no secrets, and I—supposing I'm the talker in this group and therefore in a

certain kind of privileged position; supposing it wasn't so—supposing that I wasn't in a unique position and that we all—everybody, equally—shared each other's full conscious knowledge. What would we do? We would have to come off it, wouldn't we? We'd have to agree with each other. We'd have to say, "Well, hello everyone! You're me."

Alright, now: we see our technology moving in this direction, inevitably. But insofar as it is doing this—insofar, in other words, as electronics is making everybody available to everybody else—what we're doing is that we are discovering, through technology, a state of affairs which in fact has existed all the time. Look at it this way: the first thing that human beings created on this planet to communicate with distant points were roads. Trails where people walked. With the coming of horses and the mastery of horses the roads became, as it were, more clearly stamped because of the hard hoof of the horse. But in the 19th century we began to go beyond roads because we discovered rails. Then wires. And the world became a network. The economic world became a network of roads, rails, and wires. But now the fascinating thing is: we are beginning to witness a disappearance of all those three methods of communication. The railways and the roads have gone to the airplane, and the wires have gone to radio and television, which require no wires to connect. And you will see that, as human beings become more technically efficient, that the scars of technology will disappear from the face of the earth. The moment that everybody has his personal hoppy-copter there will be no further need of the freeway, and the freeway will break up and grass and moss will grow over it because nobody's traveling it, and it'll disappear back into the landscape. Hooray. What an awful thing it is. You know, the concrete octopus. And these ridiculous automobiles in which we each travel around and make a nuisance of ourselves. But they will vanish because they simply are not technologically efficient.

Now you say, "Well, the helicopter will take its place." Alright. Is that really necessary? Because, as a matter of fact, if we couple the science of television with the science of laser beams we can get a three-dimensional image of anybody we'd like to see right here in this room. In other words, you can contact your friends in New York and you can assemble them all together in laser beam images by, as it were, dialing each one and say, "Can you come on? Can you come on? Can you come on?" Then we can have a

laser beam create a three-dimensional images of anybody you want to talk to, sitting right in this room. Now, there ma be some limitations to what you can do with a laser beam image of somebody else, but to all intents and purposes, there they are, sitting together. And you understand each one of them—in their own room in New York or Boston or whatever—they have an equivalent laser beam image of you and all the others who are involved in this conference. So you're looking at a certain area in a room where there are three-dimensional images of a group of your friends. And these three-dimensional images exist in the separate apartments of every single one of those people involved in the conference. So that the same conference is happening in five different places. Let's say that there are five people involved: in each one of them there's one of them there who thinks he's authentic. See? And he has these five laser-beam images—four—talking to him. And so it is in every other situation. You begin to ask then, "where are you?" And, furthermore, by means of further electronic technology, every one of these five people are not only visible to each other on the screen, in the cubic screen of the laser beam television, but also their inmost thoughts are clear to each other. There is no concealment. Imagine that.

So this kind of mutual knowledge of each other, which we could have by some sort of technology, would be wonderful. Really. If we would accept it. We would go on from this that, just as the roads have disappeared—or will disappear—and the wires disappear, eventually, the electronic gadgetry will disappear. And the electronic network that communicates from person to person will eventually become ESP, or psionic. We will get it from each other without any need for an electrical gadget. By telepathy. Because, you see, what all technology is doing: it's not creating a new situation, it is discovering what has always existed. When we started to use conscious attention as our main faculty of understanding the world and communicating with each other, we became ignorant of all the other methods of communication that exist. Because we specialized on one. And in order to function in this world we had to make this one method of experiencing things find out all the channels of communication that exist. And explain them, and talk about them, and measure them, so that we know they're really there. But as it goes on, you see—this conscious attention creating technological devices for communication—all it is actually doing, it is discovering the routes of communication that have always been there.

Now I want to take this a step further. Do you understand this now? Let's suppose we eventually discover that we don't need radio and that we don't need television because we have ESP, and that we come through our technology to make ESP respectable, so that we can admit to ourselves that there really is that thing going on (because we couldn't admit it before because it was not scientifically acceptable that there could be anything like that) the first step is we make an electronic model of ESP. And it works, obviously, because it's electronic. But then we discover that we don't need the model. We can do it anyhow. Just like homing pigeons have radar built into them and white-throat birds can navigate by the stars. How much more value are you than many sparrows? You know, you have it. So we discover that.

Well, when we have finally no need to travel, to telephone, to communicate by any technical method whatsoever—because we all instantly read each other's thoughts and have all information whatsoever available to us—is that the point? Is that the great desideratum? Is that what we want? The thing we were trying to get? You find there's still something beyond that. Because when you can read everybody else's thoughts, what information will you get from doing that? You will find that reading somebody else is just like reading you! Knowing somebody else's mind is pretty much like reading your own mind. Yeah, there are some little variations that are of interest but, basically, to know you thoroughly would be like knowing me thoroughly.

So not only have the roads vanished, the rails vanished, the wires vanished, the radio has vanished, the television has vanished, but, finally, the ESP vanishes as a line of communication. Because we've at last discovered that we are all one. And so, in a way, there is no further need to communicate because we are in total communion.

When we communicate what are we really communicating about? What is the content of communication? Because you see, McLuhan's come up with a very strange idea, that the medium itself is the message or putting it in a punny way to make it clearer, the medium is the message. Not so much therefore finally, the content of what is being said is the thing you're getting over, but what you're getting over is the way of saying it.

So we have to go into what it is finally that we are communicating about when we communicate? What do we want to tell our friends? Our other people, our other selves. And I had a great deal of trouble. Really sympathizing with McLuhan's point of view especially in what he has to say about television. Where he feels that the medium of television is highly participated and that the Mosaic technique of bringing that image across on the television screen is something entirely different say from a film, or from a painting. He expresses the notion that television is more tactile than visual, and therefore it involves you as the sense of touch involved to see because touch is the fundamental sense all the five senses are specializations of the sense of touch. So when you see, you're touching light. When you hear you're touching air. And when you taste and smell specially and smell you're touching gas. The quality of gas. And finally, with your fingers, you have a way the most primitive sounds the sense that is least acute in its differentiations. But nevertheless, you see, all of them are forms of touch. And so you could say as the Buddhists say there, is one sense behind all our senses they have a sixth sense for example they say use the word vinyana, which means consciousness and they have knows consciousness, eye, consciousness here consciousness touch consciousness taste consciousness. Five.

But behind that they have maravinyana which means mind consciousness that is to say the unifying. Of the senses so that you will put together the sight of fish and the smell of fish and be able to integrate them and say well this is a single experience the fish look so and smell so touch is so. And so by the integration of the senses all being forms of touch Kind of course eventually come to a state of consciousness where you can hear colors. And see sounds. If you are very very sensitive indeed.

So, you might say now then, that all communication is information. But I want to show you that straight information is not the final thing we're trying to communicate. You see, we live now in a culture where there is great disagreement about the values of life, what do we live for? There is no consensus. Because all the religions which you know where the philosophy is which gave us. What life is supposed to be all about they're all fragmented. And so there is, being no common religion, there is no common view as to what life is about. In default of that common view.

There is, especially in the academic world where people think out, ethical and political problems at tacit agreement that the the highest value we have that we can all agree upon is survival value. And therefore naturally when we communicate messages which have to do with survival. Where to find the food. Where to avoid the enemy. Then one says we are communicating about essentials. During the war, World War two, [a] friend of mine was in the office of the president of Northwestern University. And he had a number of watercolors around his office. And he said to this friend of mine, our war waving his hand paintings all this the development. We come down to essentials. Is this trip really necessary? Because this trip really necessary.

In other words what do you mean when you say is this trip really necessary when you say essential priority is given to essential industries and law. They are the industries of survival. Because we got it into our common sense even though we may not have intended to do this but it is fundamentally established in our common sense that survival is the thing that is good while there is life there is hope. And this of course is a really asinine point of view. Because it is not. A survival just going on. That we want. Yes we want survival. But survival in a certain way that is to say, in a certain style. And you will therefore see that in the end that book while there is always a survival content in communication, so far as that communication is information, what is finally more valued about communication than this survival value information is the style in which it's given. It's just in the same way as love-making. Finally, when it comes down to it, what do you want to say to the person. I love you. What are you going to communicate? An engineer would say when you say I love you with means that we're going to do reproduction and therefore continue the race. But that's not the point at all, it's obvious that is not what is a what are children for. Just to continue you know there to be not and how do you love things you strove to give them a massage if it moves fondle it.

And so, it is finally what you're communicating to someone you love is the rhythm. Whether it's the rhythm of sexual intercourse or whether it's the rhythm of dancing or whether it's the rhythm of verbal play as in telling a story or in singing a song what you're communicating there is a sort of caressing rhythm which says to you I'm so glad you're here and that you. And receive my communication which is about nothing only to say in this

way of a dancing with you I love you and that's not really what it's all about.

So then, you see the Buddhists call that factor of communication 'suchness.' For example, when we talk, you understand my words because each word that I use has a meaning. And so the words that I use refer to something other than themselves. So I use these symbols and you get what I'm talking about. Now listen carefully. What does that mean? That I communicate meaning to you by words, there's a situation, now what's the meaning of that situation? When you meditate a little bit on and you discover that it has no meaning at all. A cloud has no meaning, because it isn't a symbol it's what we call the thing. We were, the word cloud the sound 'Cloud' means that. But what does that mean you say it's not a word. So it doesn't mean anything. A cloud is jazz it's the, it's the part of the Dance of the universe. And so, likewise when I make sense to you and you say it makes sense to me we have a kind of interlocking that would correspond perhaps to a spider's web. Where various rings of thread are joined to rings of thread inside rings of thread is joined together, so we join together by talking, see we play together by talking but what that more means some kind of jazz. And that suchness. In the practice of meditation, the most important thing is to get down to suchness. In everything that goes on a great Japanese Zen master when he was about to die wrote a poem which said. 'From the bathtub to the bottom I have uttered stuff and nonsense.' In other words above carbon which the baby is washing in the bathtub in which the corpses washed before burial. Alpha to Omega. Maternity ward to crematorium, or in all this time, said I've talked on and on.

And this is part of the whole thing of Zen to be able to hear all voices all communications all gestures all shapes all sensations whatsoever. In their fundamental form as lowing. When the baby starts to talk in the beginning, it's speaks what Jacob Bergman called the natural language. And he says that man it is fall. Talking about the fall of Adam lost the natural language. And the natural language is understood by birds and beasts, because they speak it. Because a lot of what birds say is not communicative in our ordinary sense of delivering information, some of it delivers information.

But a great deal of what they say doesn't deliver any communication, it is just playing with sound.

And a great deal of what we do is playing with sound. I'm not particularly aware of this as a philosopher because a lot of people will be very critical of what I say and say you don't really make any sense at all you sound as if you do you but. I'll put it when the public into thinking that you haven't got something important to say and all you're doing is making noises and I say Granted that's absolutely true but if I make interesting noises and manage to make a play of ideas that is in some way musical So the fascinating people say well. It's the same sort of thing that we enjoy out of looking at a mountain or watching waves or the flight of birds. Because it is this dance. You may remember that this morning I described the situation as follows. I'm talking to you, and you understand what my words mean. Situation A. Situation B is taking the situation A as a whole my talking to you, and you understanding what I mean what does that situation mean? And we find it doesn't mean anything. This could be a way when we say something is meaningless it's a way of putting it down. But on the other hand when you consider a mountain or a cloud or a tree and ask what does it mean and you realize it's not a word it's simply an authentic existence in it's own right it doesn't mean anything, but it's great. And so, in this way the nearest thing in that kind of achievement that nature does all the time in human activities is music. Once when Gustav Holst was giving a lecture on music he started out this way he said music is a natural and universal language. He took a step backwards and said that so important I'm going to say it again music is a natural universe alone. But nobody knows what it's about.

Sometimes we say music represents emotions. But a great deal of music, although it has a very strong feeling quality, does not represent specific emotions. Inferior music copies natural noises. The sound of water. The thunder of the hooves of horses or in that dreadful composition. Eight hundred twelve overture of Tchaikovsky, you hear Napoleon's armies retreating from Moscow. Or in some of the bad work of Debussé. Like a rocket about along with he. Makes noises like bells tolling from under the water. But are very great musicians of the West, Bach Scarlatti Mozart and so on. They don't do anything with the music except create elaborate patterns of sound. Bach is very mathematical and yet curiously despite his

tremendously developed intellect the music has a very strong feeling quality. Joyous and exuberant. But it's all pure play with sound. And therefore one might say, the communication that you make with music is in a curious way the most important kind of communication you can make. Even though you're saying nothing the music delivers no information. But what a form of communication. And so it is also with dancing with somebody. All you are saying with dancing is I love you. If you're delivering any message at all. I want to play with you. All I really want to do is baby be friends with you know. What does it mean? What is the content of friendship? You can't say, what is the content of love? I want to screw you? That's a sort of it part of it it's incidental it's a way of saying. Very strongly Yes I do want to be with you.

But basically love is something we can't put our finger on at all. If we say we use such words as warmth. Tenderness. All these things they don't really get to the point. When you're you are loving somebody you are simply delighting in that person as such as if another human organism and its mental and its physical aspects were a piece of music or a work of art or a glorious morning that you were just enjoying every inch of it. And you go over another person's physical form. And look at it from every possible point of view and play with it and tickle it. And that's what it's about. It's the, it's the adoration of the form of a human being. And you do all you do that adoring in terms of physical contacts that are say dancing with your fingers across the skin or whatever it may be. But this is the this is the nitty gritty the nub of love. It is not that I here and now suddenly undertake to support you for the rest of your life. That's a delusion of the West you think you don't really love me unless you'll sign on the dotted line here give me this contract and then I know I can rely on you always. What did you want to know? Why did you want the contract? Just to be fed indefinitely? Just to be supported indefinitely? What a bore. One wants something much more than that you want to be played with indefinitely. That's more like. To have this. Vibrancy going through you.

And this then is why music of all the arts is the most meaningless. After all, music is a major industry in the United States. The the money invested in orchestras and operas in the recording business is fantastic it's at its, horseracing is a very great industry but music I think is probably absorbs

more millions in Australia. And you could make a case that this was a complete dissipation. It solves no useful purpose, it doesn't help anyone to survive. It is a noise meaningless noise, endless meaningless noise going down the drain and all these energies of orchestras are all a power of electronics that delivers this, is total waste. And people get hooked on it. They get the thing called corditis. Which is addiction to harmonics. And they have to have this repeated day after day some people get up in the morning and they can't function til they've had cup of coffee. But many more people get up in the morning and can function till they turn on the radio or guts and lose it. And what would you say then of a culture which took this standpoint?

Music not a lot of. Music is a diversion from reality. You know, you know that kind of awful utilitarian attitude. But really one of the basic things you see that we live. What makes it worth. Surviving and going on is there can be such a thing as music that can be done singing in other words that we can do things that are absolutely irrelevant so far as mere survival is concerned. Now we have the problem that all work and no play makes Jack a dull boy. Dull for work. And people who play. Justifying their play. By making it a means to that end those people never play. Because you don't really play until you get so absorbed in the music or the dancing or the whatever you're making the part of doing the calligraphy. Eat until you get so absorbed in that there is no reason for it other than what you're doing. The sheer delight of that then because you are absorbed in something. For which there is no ulterior motive which is pure play. This by way of a byproduct produces sanity. In other words, if you play in order to be healthy in order to be sane, you're not playing. But if you play just to play, then as a byproduct as something you couldn't aim at directly you are saying. And so, a culture which allows for this, which allows for this sort of goofing is a healthy culture. This is not the culture that we live in. Because it is extremely anxious about play. Everybody when they play they have to find an excuse for it. And say well this is culture. We're trying to sway the city of San Francisco to support its opera. What sort of propaganda do you have to use? You can't say, 'We should have a good opera house because we dislike going to be opera.' You say, 'This improves the city's image.' After all, they have it in New York. And that is because we do not allow ourselves the idea that life is not serious. Because somehow we feel, if you aren't

engaged in something serious. You're a loafer, you're not contributing to the social welfare.

And so in this way, the artist has a peculiar role in the society very very interesting. Because the artist is a very deceptive fellow. He appears to be the supreme luxury, the irrelevant fellow. You can afford an artist you can afford to buy paintings if you have surplus money. That's a luxury so you can support an artist and we call it fine arts. The completely useless person. Who makes paintings which are sort of big labels or posters that you stick on your utilitarian walls to decorate them. But on the other hand, the artist is the man who shows you the future long before everybody else sees it. The artist is the Eye Opener. Just because the artist is distinct in role from the preacher and the philosopher, the artist can get away with all sorts of things. For example in our culture, if you're a university professor a doctor or a minister like these three professions, teacher, Doctor or a minister. You have to be very careful about your private life. Because the moment you have any alliances come not quite regular, people's tongues begin to wag. And why do they work because they say the way you behave is inconsistent with your profession with what you profess you are teaching people the good life, the healthy life, and you live in this disreputable way. You have a mistress you have something going on. But the moment an artist should take a mistress this is what is expected. Everybody says oh he's an artist in other words he doesn't matter he's irrelevant. He is an entertainer some sort of clown but on the other hand if you belong to a high culture, you patronize artists.

So these the role of the artist is very fascinating. Because he appears to be the is the clown the jester, the absolutely unimportant and irrelevant person. And yet it's actually through the artist that we learn how to live. Not through the preacher, not through the philosopher, not through the professor. It is the artist teaches us, whether he does it visually painting or sculpture actually over the above all, in music.

So, a man like Mozart, who could well claim to be the greatest man in European history was a kind of a gay happy go lucky fellow. With problems money, illness, etc. But what a songbird, what a nightingale. And so then to this day listening to Mozart as a in England the Glyndebourne opera this is

about the forest out fashionable aristocratic thing you can do. Go to this lovely country house in Sussex and hear the Mozart operas. It's as much a matter of status as going to church. Almost moreso.

You should read if you can get hold of an interview with George Harrison one of the Beatles in a recent issue of the East Village Other. Where he explains the deep philosophy of music that they understand and follow. How the the very nature of sound reveals the meaning of the world and why because of this, he regards himself as a Hindu. In Hinduism, the fundamental source of life is called Vok. Vok in Sanskrit means the word to speak, but not so much the word that communicates as the sound the utterance, the flow of tone. So you have in India the use of mantra. The use of chanted words. As one of the very basic forms of yoga, understanding the mystery of the world. The Hindus use the word ohm. Which would be spelled out a-u-m. Because the letter A. is in the back of the throat. You push it through the vowel of. And is of the lips. So the word comprehends the whole range of sound. It's called the problem. And ohm simply means. Well it is the sound all sounds are basic to the sound of but there is the word that not only signifies but also is what there is. Everything is ohm. Ohms sweet ohm. The whole universes and his ohm. And so if this is a very good word because you can use it instead of God. God has all sorts of nasty associations attached to it of the root the political boss of the world the preacher the prig the, the, nosy Parker in charge of everything the rotten grandfather. And all that, the sentimental mother of the world or whatever. And the word god therefore is a distasteful word now to most Westerners.

But ohm has no associations with it. In you might have encountered it in a Vedanta society in associated with swamis in yellow robes. But on the whole only has no association so it is a clean a clean word and it has no meaning, except it is the very pulse of life.

So I'm spreading a rumor, in Buddhism you know, there is a mantra from ohm mani padme me from. Ohm means nothing except everything money. Means a jewel partner is a Lotus own is correct you know. So the jewel in the lotus. In other words, imagine a monologue you see which is a lotus flower with all those petals spreading out from it and right back in the middle of that there is a little crystal ball or a diamond. And you look into

that, and it contains the reflection of everything. You go way way way into that thing down, down, down, down. And that's the ultimate turn on. So ohm. And at the end. Hum. H. you M. and say I am in English and. You are. There's a new religion just being called hum. And this religion has no hierarchy, no organization no doctrines whatsoever. No words. Only music and ritual. And, we will find in a little while that hum is really what most people belong to. But you can't pin it down. There is no address to write to, there's nothing to join it just something people do like the shaving brush their teeth in the back, so they hum.

Well now, it's very very fascinating for purposes of understanding music as communication. To look for a moment at different fundamental differences between Western and Oriental music as I know a very very great musicologist who thoroughly understands the world of Bach and Beethoven. And is one of the greatest scholars and really. Of around. But went to his ear Hindu music is childish. And he sees no subtlety. He's quite deaf. But when it comes to Chinese and Japanese music, most westerners are flabbergasted, because they can't make any sense of it at all, because it sounds as if somebody were making the most ridiculous noises. So when there's a Japanese. No drama, singer and dog. [sings] Sounds like he's being strangled. But he's giving sounds of passionate love. For them into our ears that's a deplorable you know when you want to. Give examples of love the. Dot E O O you know you know we're really upset we're in love. Well now, here's the thing, in Western music, when we study music, the first thing we've done is notation. We have, most people begin with a piano. Or a generate some instrument Well the important thing is to be able to read the music and then do the stuff from the the written paper.

Now this limits you in a curious way because our notation. First of all, is based on the chromatic scale. And secondly it has fixed rhythmic intervals you have you see your whole note half note quarter note eighth note sixteenth note, and you can change the value of the dotting them to give them half their value. And you tend to write in bars four four, three eight or whatever it may be and when an Oriental listens to our music it doesn't matter whether it's a love song or a Grandiose paean of praise or whatever, all of it sounds like a military march because it's that one two three follow up to the fall one two three four one before the quantity of the class of the

year that. All the time. And he hears a mechanism and you see he hears this absolute regularity.

Now in Indian music you'll have bars. Very long measure you can count twenty to the Bar none of them are. And when you do you learn music from a Hindu teacher, you don't. Learn notation. You learn directly from the teacher. In other words, he takes the instrument and plays it and you copy them. With the same instrument sitting in front of them. And they think, you see, that notation could never record music they do use a notation they use a notation to remember simply themes. There is a certain rag, a certain theme, and they've that you can write that down. But they don't play from it. What they do is they according to certain traditional procedures they improvise on the basic forms. And you, therefore play the instrument, and what you're trying to do is to make it as completely as possible responsive to the subtle motions of which a human organism is capable. In other words, just as in in moving your hand, there's an infinity of waves you can put it through.

So likewise in using your voice, there is an infinity of sound that you can produce. Because the same you can with a strained instrument in moving your finger whether or no rigid stops as there would be on a piano so on the continuum of a violin, you can move your finger and produce an infinity of subtle sound. And what they do is they delight in the infinite possibility of making sound of the human organ, and they like instruments which are very easily and directly related to the organism. So the flute, the vena, the drums, so these are direct human contact with an instrument with a piano you've got something interspersed you've got a hammer mechanism. And every bit tune string. With a harpsichord the same way, the pluck, and went Wonderland Mosgrove marvelous as she is plays the harpsichord you get a hurdy gurdy effect to get a kick top top top top to kick talk to get a tick tick tick tock clock tick tick tick tick tick tick tick tick the of this going on all the time with a clavichord there's a difference because the track record doesn't have a mechanical relationship between the finger and the straight so that by. Every variation of touch you make on the clavicle is represented in the sound. In other words the piano in the harpsichord alike. Electric typewriters which have a uniform touch whereas the type because it is more like an old fashioned typewriter however hard you put it has some effect on

the on the print. So, the it is in Oriental music, while there is an incredibly subtle discipline. And the Hindu drum can do the most astounding things, and you can count it out, he counts it out in these very very elaborate patterns but at the same time there is a an attitude about of the Sixers just fascinating. We attended a concert of the DeYoung Museum a few weeks ago where the son Ali Akbar Khan's orchestra, and there was a drummer in this it was just out of this world. Wonderful thing about it was that as he was playing with the rest of the orchestra they were all talking to each other with their instruments. And if they made eye contact, while they were playing, and this guy it was just it sheer delight, he was laughing as he was playing, and all the other musicians were just loving it so that he was of the dead honest person looking at his music you know reading that doing he was joining in with everybody dancing to his fingers were like. Butterflies. Hummingbirds, that is to say, just vibrating in the most extraordinary way because it takes years and years and years to learn. But he would really a joy. But what was he saying?

They have a language for the drums and they can speak a drum by using syllables like the that done. It does or didn't mean one kind of a hit and then and ten didn't ten didn't ten didn't think that they did it if that if they don't get done that that dahdahdah, dahdahdah, dahdahdah, you know and they do they explain a rhythm like that sometimes. First, they say it, and then they play it. But it's all it's all about, that's all about. Dit-da. Dit-da. I suppose some of you have read a book of mine called The Joyous Cosmology, in which I referred to once a very curious experience I had with Hindu music. I happen to have acquired from Timothy Leary some of this extraordinary Mexican mushroom. And I was feeling awful. I'd come back from a trip to the east, and was tired, and had a sore throat, it's just lousy. So I took this thing. And at the first just felt just are all right everything turned into mud. You know what you expect of mushrooms the fungus everything Fungo it kind of land. But after a while it all changed, and I found myself listening to this Hindu music. I didn't know what it was, because the, my host, whose house I was at, didn't explain things. And I thought when I listen to this. What kind of idiocy is going on? I thought you see, my friend with whom one is spending the day is a pretty wild kind of fellow. And I thought he'd put on a tape recording of his and his friends antics. Because they weren't doing anything that anybody is supposed to

do. It was like children making faces. You know are they to go this. Use of children up to put those on the proof awful faces and make weird noises I just thought this is just something absolutely absurd. And then came this dit-da business you know. So I said Roger, Hey let me see the album. I got the case here it's says, Classical Music of India. It did by Ellen Donohue. Who is the most scholars respectable pundit subject into music I said somebody is pulling my leg. No not at all here was this just babbling sounds one of the do the DAR business but they also could use their voices like oboes you know how that. And we got a close get on those and do an oboe stuff and it sounded like to us it was just the whole kind of dozens of children. Just going out of their heads. Well I listen to this and I suddenly realize. That that's what life's all about. And you know it was the most fantastic sudden recognition that everything in this world is gloriously meaningless. And it's curlicues like confidence. We get mixed up about it because sometimes we think that if play that is going on when you sit when you see a phone. It has first of all the main branch then it has subbranches and all of the Sopranos has come sub-sub branches and out of the sub sub branches come sub sub sub branches and so you get a further. So now if you couldn't number each of these levels on which things are happening you say well this is a number one level of this is the number forty two level this is number sixty five level.

And you judge events and say it's good it's bad it's proper it's improper but what you don't recognize is that you say something is improper because you thought it was a sixty three level whereas that really it was a hundred twelve. And you didn't know, you didn't realize the level the thing was on, so actually, in the whole play of human life with all its joys and sorrows, its trials and its evils its good is just something like a phone. It has to be Masonic that means just simply another plan is making its life there. The Atlantic bugs the sun tan the living to they're doing their stuff they're living off the phone the phones living off something else we're all dealing on each other in one way. And I saw the whole thing as this fantastic play.

So, in order to get into the—can you get into that state you see? You get into it by listening to sound. That's one way and there are lots of ways and one of the easiest ways is through concentration on a tone. Because you see, this is the easiest way to stop thinking for most people. If you just concentrate

on a single sound. It's very easy to do it and this stops your thoughts. In other words, it stops you talking to yourself inside your head verbalizing. And the important thing is if you want of the vision of the world as it really is you have to stop talking at least temporarily. Doesn't mean that talking is a bad thing, it means it's too much of a good thing. So that if you silence talking and you experience yourself. Just in the same way as you experience you [nyaahh]. It's what's going on. And it may be going on you know you know kind of a way that you call nice features. Like you know maybe gone that way. But so what, finally does that? That's what's happening and you know what we're all taught by mothers and fathers to put a value on. See, when it goes a certain way, the rhythm of life goes in a certain way when we say oh, watch out, watch out, watch out, watch out because that may be the end what will the end be one. What's wrong with that? Things that start have to stop. Things that go on have to go off and things that go off have to go on. But you see, we get involved by putting a value on it all. Now I could say that's bad you should do it but at the same time getting involved and putting values on the top of the game too. Getting hung up getting hooked. So you don't get unhooked by saying to yourself I shouldn't be attached. I shouldn't do this I shouldn't do that. All you do is you see that getting hooked on is simply another form. More nonsense. More jazz, but deeper jazz so like you feel you have an ego that's an illusion. But it's a very weird illusion the very far out scene. Person who you might call a square who thought really committed to. The illusions of Standard Life is a very far up person because he doesn't know where he started. He's completely lost. But you could say it's a great show to get that far to get that involved in seriousness. So when you look at a square with houses. Terming set on inflexible attitude you have to say secretly you laugh and say why you're doing a wonderful job. How far. You can learn in this way to love squares. And this is the only way that will ever change in. Humans never condemn the scale of harsh language. Because they're very far out they don't. Get involved in other words the ultimate curlicues.

It's like a labyrinth, you see, all life is a labyrinth it's a system of tubes. And there are tubes within tubes within tubes. And form on the very very great friend is of this labyrinth you get all kinds of hothouse growth. Very complicated games, so complicated that the people involved in them are lost. But that's simply a function of being a long way from the center. When

a fern or any form of plant expands from that center what is happening is this. Inside the Stephens and the stocks and the two which constitute the Solomons and all the little creatures and they're going travelling along, and they're getting up there they want to go out cos as always somebody along with them says, 'Now be careful,' if you get too far because you get too far and spoil the form. Instead of keeping inside the bounds of the fern you just go off into gas and that will be awful to you because you're fern, you're not gas.

But those little creatures out there on the end say, man would like a gas so that. He would want to get way off but it is a result of the tension between those little fellers that want to go way up see other people want to stay in. Which you get the are on the clear form really. They're working against each other but they are working even though the one thinks it's right the other things it's right they're both right and they're both wrong they're both right and wrong but they do by being both and in a counter. Position like this they create what we call existence what we call the shape of the leaf the form of the phone. So, you will find of course, that some of them are ours in fact escaping, and some of them are going off into gas. And some of them are not some of them are staying put. And if there weren't some of them going off into gas, there would be no energy in the things. You see, all energy is a quality of follow through when you hit a golf ball you mustn't stop to hit up the ball you have to go really like that see right through so all energies of life are have in them a possibility of an excess, of going too far.

When you bring up your children and you tell your children your various far out ideas and the children suddenly believe in. I'm horrified. No, all kinds of philosophy I've talked about is being believed by children. And they're taking it literally. Oh my God, what will they do next? But everybody feels that way. In regard to the strength of a younger generation is coming because it's younger generations. And we think about young people. We have terrible ideas, we think that we know what life is, and that they have to be told. They will learn it from us and be like us. We don't take that attitude when we see the new vegetables come up in the spring. We don't say the vegetables have to be educated to be vegetables. We say, we're ready at last young vegetables with all the life and energy. New meals for everything so when we see young people come up say Good gracious

isn't this great to see the human race is still doing its stuff. I wonder what they'll have to teach us. Because wisdom doesn't come from about down it comes from below. Wisdom. Surging into us. The old people, they have a function. But they have it in order to fulfill that function they have to understand first. That they can learn from the young sources. If they understand that, then they can be wise and be teachers. If they don't understand that in the recount to be wise you have to that's the meaning of the saying that to enter the Kingdom of Heaven, you have to become again as a child. And finally, to get back to my point, to become as a child means that you do things which adults. Consider unimportant. There is a wonderful Buddhist character. His name is Hote, in Japanese, Putai in Chinese. [And] he carries around a bag enormous back in which he collects rubbish. Every kind of inconsequential rubbish and gives it away to children. Because children understand the meaning and significance of rubbish. Something which... My father when I was a small boy once said you are a picture up of unconsidered trifles. Because the rubbish is the most wonderful thing in the world from the point of view of a child.

So, once a Zen master was asked what is the most valuable thing in the world, and he answered the head of a dead cat why? Because no one can put a price on. So in this man see who is wondering around picking up rubbish. All the trivialities of life you see is the leaves floating down the wind and laughs that. This is becoming again as the child, in other words, from the child's point of view the things which the adult considers irrelevant to survival are perfectly important. And so children collect pebbles and colored glass and all sorts of trivia which they consider as precious as diamonds. The adults say 'Oh, frippery.' But they really have the secret.

Now the child, as child, doesn't know how to play the adult game which is a power game. And so has to be educated to learn the values of the power game to learn what's what and what is important. But when he has mastered that game, he realizes it has no rewards. That all the things that the adults thought they were gaining by their power games are after all not worth having why you can be rich and miserable. So that having learned and having seen through the adult power game, you come back to the point of

the child. [blows lips] Well let's have a brief intermission will suffer sessions after seminar. Just destruction.

Seeing Through the Game

I suppose that some of you have read a. Very fascinating work that was written many years ago by a C.G. Jung. A commentary that he wrote to a translation of a Chinese classics by Rikard Vilhelm called the Secret of the Golden Flower. Now you may remember, that in that commentary he takes up the very fascinating problem of the dangers inherent in the adoption of Oriental ways of life by Westerners, but more particularly the adoption of Oriental spiritual practices such as yoga. And I remember I learned a great deal from that essay and appreciated it very much and I was in many ways. Because even in my own fascination. With fondness of our intell philosophy, I have never been tempted to forget that I'm a westerner. But as I think this essay over. I'm not sure that young discouraged the practice of yoga by Westerners for quite the right reasons. I find so often the difficulty in Jung's ideas, lies in his theory of history. Which is I feel a hangover from nineteenth century theories of history. Encouraged by Darwinism. Namely that there's a sort of orderly progression. From the ape. Through the primitive. To the civilized man and of course naturally at that time that was all hitched in with the theory of progress and it was highly convenient for the cultures of Western Europe which were then one up on everybody else to consider themselves in the van of progress and when they visited the natives of Borneo and Australia and so on to be able to feel that they were perfectly justified in appropriating their lands and dominating the macaws they were giving them the benefits of the last word in evolution.

And therefore are under the influence of that sort of theory of history which is felt in the work of both Freud and Jung, one gets the feeling of there being a kind of progressive development of human consciousness and your own as charitable enough to assume that because the Chinese and Indian civilizations are immeasurably older than ours. They've had to foster the possibility of far more sophistication in psychic development. Even though he feels and probably rightly that there are things they can learn from us.

But the reason why he discourages the western eye from the practice of yoga, is that he says this is a discipline for a far older culture than ours which along certain lines has progressed much further. And has learned certain things that we haven't mastered at all yet. And that's he points out that when somebody embraces Vedanta or Theosophy or any yoga school in the West and tries to master a discipline of concentration. In which. They have to oust from their consciousness all wandering thoughts he says that this for the West and I may be a very dangerous thing in. Read because just exactly what the West and I may need to do is to allow a free reign to his wandering thoughts and his imagination and his fantasy because it's only in this way that he can get in touch with his unconscious and that his unconscious will not leave him in peace until he gets in touch with it and then assumes the members of oriental cultures have done this long before they went in for yoga practice.

Now I don't think this is quite true, but I do think there are other reasons. Why western people need to exercise a good deal of discrimination and caution in adopting Eastern disciplines and ways of life. In other words, it's rather like the problem of taking medicine. You know, if you don't feel very well and you go to a friend's medicine cabinet and you sort of look at over and see bottles of medicine and now and you say I'm sick I need medicine or you take some medicine any medicine will do well it won't. According to what's the matter with you so the medicine has to be prescribed. And I don't think that the things which some of the eastern disciplines are designed to cure, are quite the same things that we need. Now it's fundamental to my view of the nature of such forms of discipline as Buddhism and Taoism. That they are ways of liberation from a specific kind of confinement. That is to say, they're ways of liberation from what I've sometimes called the social hypnosis.

In other words, every culture, every society, as a group of people in communication with each other, has certain rules of communication. And from culture to culture, these rules differ in just the same way that languages differ. And a culture can hold together on very very different kinds of rules I won't say any kinds of rules but very different kinds of rules always provided that the members agree about them whether they're forced to agree whether they agree tacitly or whatever the reason may be. And

these rules are in a way very much like the rules of a game. In other words, take a game like chess. You can have the kind of chess we play with an eight square board or you can have a kind of chess that the Japanese play with a nine square board. It doesn't make any difference so long as you both play on the same board by the same rules. But simply say this is. A chess as a game. And in the same way the development of human cultures is also in a way a game and that is to say, it's the elaboration of a form of life. And the fun of it in a way is the fun of elaborating it in just some interesting form. That's the same as the fun of a game the fun of a game is it has a sudden interest. But it doesn't follow. That the rules of the game correspond to the actual structure of human nature or to the laws of the universe. The Because in every culture it's necessary to impress upon especially its young. Remember that these rules jolly well have to be kept. They are usually in some way or other connected with the laws of the universe and given some sort of divine sanction. And there are indeed cultures in which the senior members of the group realize that that's a hoax, that's as if it's a made up and is done to terrify the young and when they become senior members of the culture themselves they see through the thing but they don't let on They keep it quiet, they don't let out to those who are supposed to be impressed that this was really a hoax to get them to behave.

But anyway. After a great deal of careful study I've come to the conclusion. That the function of these ways of deliberation is basically to make it possible for those who have the determination. And we'll see why in a while to make it possible for those who have the determination. To be free from the social hypnosis. In other words, if you were a member of the culture of India. That almost any time between maybe nine hundred B.C. and eighteen hundred A.D.. It would be for you a matter of common sense about which everybody agreed. That you were under the control of a process called karma. Not exactly a law of cause and effect. But a process of cosmic justice. Whereby every fortune that occurred to you would be the result of some action in the past that was good and every misfortune to you would be the result of some action in the past that was evil and for the model this action in the past might not have been done in this present life but in a form in life it was simply axiomatic to those people that they were involved in a long long process of reincarnation. Reaping the rewards and

punishments. And there were not only there was not only the possibility of being reincarnated again in the human form, but if you were exceedingly good you might be born in one of the heavens, paradises and if you were exceedingly bad you might be born for an insufferable period of years not forever in a purgatory. And the purgatories of the Hindus and Buddhists are just as ingenious the horrible as those of the Christians.

Well of course. Everybody knows I mean anybody seems to have in a sense that all this. Imagination of postmortem courts of justice is a way of telling people well if the secular police don't catch you the celestial police will catch you, and therefore you had better behave. And it's an ingenious device for encouraging ethical conduct. Now...but remember, that for a person brought up in that climate of feeling where everybody believes this to be true it seems a matter of common sense that it's so. And it's very difficult for a person so brought up, not to believe that that is the state of that. Take an equivalent situation in our own culture. It's still enormously difficult for most people to believe that space may not be Newtonian space. That is to say, a three dimensional continuum which extends indefinitely forever the idea of a four dimensional curved space seems absolutely fantastic and can't even be conceived by people that aren't versed in the mathematics of modern physics. Or again as I've often pointed out it's very difficult for us to believe. That the forms of nature are not made of some stuff. Called matter. That's a very unnecessary idea or from a strictly scientific point of view but it's awfully difficult for us to believe it to believe in other words that there isn't this underlying stuff. And not so long ago, it was practically impossible for people to conceive that the planets did not revolve about the earth encased in crystalline spheres. And it took a very considerable shaking of the imagination. When astronomers began to find out that this need not necessarily be so.

All right, so now let's go back to the problem of somebody living in the culture of ancient India here it is a matter of common sense to see that he is going to be reborn. Now, there's some perhaps exceedingly intelligent person who for one reason or another discovers that this idea is not so. After all, when you get such disciplines as Vedanta and Buddhism they say that the ultimate goal of the discipline is release from the rounds of rebirth. And incidentally also which is fundamental to that release from the illusion that

you are a separate individual confined to this body. But so far as both of these things are concerned, they also say that the person who is liberated from the round of rebirth as well as from the illusion of being an ego, sees when he is liberated, that the process of rebirth than the whole cosmology of reincarnation and karma as well as the individual ego, are in a way illusions. That is to say he sees that they are maya. And I would like to translate my out of this moment not so much in Newton as a playful construct. A social institution. So he sees you see that those things are not so. They are only pretending to be so. And you see, he ceases to believe in karma and reincarnation and all that in exactly the same way that a modern agnostic no longer believes in the resurrection of the body at the Day of Judgment. I I know this to be so because. Although you will get very many Hindus and Buddhists who say that they believe in reincarnation, and come over here and teach it as part of the doctrine of Vedanta or Buddhism. The most sophisticated and the most profound I'll say perhaps profound rather than sophisticated. But is that I have known have said that they don't believe in it literally at all.

And, so I could say that those who do believe in it believe in it simply because. It's part of their culture. And they have not yet been able to be liberated from it. And so it seems to me very funny indeed. When Western people who become interested in Vedanta or Buddhism. That is to say, in forms of discipline to liberate Hindus and Chinese people from certain social institutions, Western people adopt it and then also adopt. The ideas of reincarnation and karma from which these systems were designed to liberate them. Of course, they adopt them because they feel it's consoling that one will go on living and that wasn't the point at all. Or that it explains something that all why one suffered in this life was not because the universe was unjust but because you committed some misdeed in the past.

And so, Westerners who take up the Oriental doctrines in that spirit. Unfortunately take out the very illusions from which these doctrines were supposed to be ways of deliverance. Now that may be difficult to see just because. So many practicing Hindus and Buddhists say they believe in reincarnation and this whole process of the cycles of karma and so on. And they after all, are practicing it and they should know. When I look here there's a certain good reason why they shouldn't. Of course, I'm making an

exception of the Indian or Chinese who's been educated in Western style. And he ceases to believe maybe in the cosmologies of his own culture but he's not liberated in the Buddhist sense because in receiving a Western education he's become a victim of our social institutions instead and then you just exchange Well one trouble for another but. When you take the situation as it stands now as it did stand in India isolated from Western culture. Obviously, no society can tolerate within its own borders the existence of a way of liberation a way of seeing through its institutions without feeling that such a way constitutes a threat to law and order. Anybody who sees through the institutions of society and sees them far as it were created fictions in the same way as a novel or a work of art as a creative fiction. Anybody who sees that of course could be regarded by the society as a potential menace.

But, then you may ask well, if Buddhism and Vedanta and so on were indeed ways of liberation. How could Indian or Chinese society or Bernie's society have tolerated their presence. Well the answer lies simply in the much misunderstood each. Terraces some of these disciplines. In other words that those who taught them the masters of these disciplines made it incredibly difficult for uninitiated people to get in on the inside. And, their method of initiating the men away was to put them through trap after trap after trap to see if they could find their way through. In other words, such a master would not dream of beginning by disabusing the neophyte, and saying well you know all these things you heard from your father and mother and teachers and so on were fairy tales .Oh no indeed. He would do what is called in Buddhism exercise the use of Upaya, the Sanskrit word meaning skillful devices or skillful means. Sometimes described as giving a child a yellowed leaf to stop it crying for go. After all, when you approach one of these ways of liberation from the outside. It looks like something. Very very fantastic. Here you are literally going to be released from a literally true and physical cycle of endless incarnations in have arms and heralds and all kinds of states. And therefore naturally to do that why. An undertaking that must be what I'll wonderful likes rotten repast and you've got to become. And so the neo fight is ready for almost anything. And the teacher, because of the fundamental problem in this whole thing is for him to get rid of the illusion you see, that he's a separate ego if there's no separate ego Aust of souls then there's nothing to be reincarnated so all the

teacher really in has all kinds of complicated ways of doing it all that he really says to him is by now. If you will look deeply into your ego, you will find out that it is a non ego that you are self is the universal self that he might say if he would have it down to us or if you were a Buddhist you might say if you look for your ego you won't find it. So look for it and see, and really go into it. And so he gets the man meditating. And trying by his ego to get rid of his ego. Well that is a beautiful trap it can last forever. Until one sees through it.

In other words this is like trying to you know, sweep the darkness out of a room with a broom. Or its life gets worse and out. Lao-Tzu or Chuang-Tzu have a nice figure for it beating a drum and such of a fugitive that's to say you know when the police go out because they had a telephone call it was a burglar. They come racing to the house with a siren full blast in the. Burglar hears and runs away. Because of course to try and get rid of the ego for one's advantage in some ways an egotistical enterprise and you can't do it. And so of course the student gets to the point where he begins to realize that everything he does. To get rid of ego is egotistic. And this is the kind of trap in which the teacher gets him. Until of course he comes to the point of seeing that his supposed division from himself into say I and me the controller controlling part of me in the controlled part of me the knower in the known and all that is is phony. There is no way of standing aside from yourself in other words and as it when changing yourself in that way he discovers this finally. At the same time, he discovers, almost at the last minute you might say the fallacy, or rather, the fantasy nature of the game like nature. Of the system. Of cosmology which has existed to. As it underpin all. Give the basic form of the social institution of his particular culture or society.

In other words, you may put it in a in another way one of the basics things which all social rules of convention conceal is what I would call the fundamental fellowship between yes and no. Say, in the Chinese symbolism of the positive and the negative the yang and the yin you know you've seen that symbol of them together like two interlocked fishes. Well the great game I mean the whole pretense of most of the side is that these two fishes are involved in a battle with the opposition the down fish the good fish and the bad fish and there's out for a killing and the white fish is one of these

days going to slay the Black Fish. But, when you see into it clearly you realize that the white fish in the black fish go together they're twins they're really not fighting each other they're dancing with each other. That you see though, is a difficult thing to realize. In a set of rules in which yes and no other basic and formally opposed. When it is explicit and a set of rules, that yes and no positive and negative are the fundamental principles. It is implicit but not explicit that there is this fundamental bondage of fellowship between the two theories you see that if people find that out. They won't play the game anymore I mean supposing a certain social group finds out that it's enemy group which it's supposed to fight is really symbiotic to it. That is to say the enemy group fosters the survival of the group by pruning its population. With never a do to admit that it never never do to admit the advantage of the enemy just as George Orwell pointed out in his fantasy future in one nine hundred eighty four about. A dictatorial God. I'm asked to have an enemy and if there isn't one it has to invent one. And. By this means by having something to fight to see having something to compete against the energy of society to go on doing its job is stirred up. And what the Buddha or Bodhisattva type of person fundamentally is one is one who seen through that. Who doesn't have to be stirred up by hatred and fear and competition to go on with the game of life.

Tribute to Carl Jung

I'm sitting late at night in a lonely cottage in the country surrounded by many favorite books which I've collected over a number of years. And as I look up at the shelves, I see that there's a very large space. Occupied by the volumes of one man. Carl Gustav Jung, who left this world not more than a few weeks ago. And I'd like to talk tonight about some of the great things that I feel that Jung has done for me. And also the things which I feel to be his enduring contributions toward the science of psychology of which he was such a great master. I began to read Jung when I first began to study Eastern philosophy in my late adolescence. And I'm eternally grateful to him for what I would call a sort of balancing influence on the development of my thought. As an adolescent, in rebellion against the sterile Christianity, in which I was brought up, I was liable to go absolutely overboard for exotic and foreign ideas. Until I read the extraordinarily wise commentary that he wrote to Richard Wilhelm's translation of the Chinese Taoist text

called the “Secret of the Golden Flower.” And it was Jung who helped me to remind myself that I was by, upbringing in by tradition, always a Westerner and I couldn’t escape from my own cultural conditioning.

And that this inability to escape was not a kind of prison but was the endowment of one’s being with certain capacities, like one’s arms and legs and mouth and teeth and brain, which could always be used constructively. And I feel it’s for this reason that I have always remained for myself in the position of the comparative philosopher, wanting to balance east and west rather than to go overboard with enthusiasm for exotic imports. But there are aspects of Jung’s work far beyond this that I want to discuss.

And first of all I want to call attention to one fundamental principle that underlay all his work and was most extraordinarily exemplified in Jung himself as a person. And this is what I would call his recognition of the polarity of life. That is to say, his resistance to what is to my mind, the disastrous and absurd hypothesis that there is in this universe a radical and absolute conflict between good and evil, light and darkness that can never never, never be harmonised. This conflict has come up to us in a very vivid way in recent days with the trial of Adolph Eichman and with Arthur Kuster’s passionate denunciation of any sort of philosophy of life —— and he has in mind particularly eastern philosophy is like Buddhism and Hinduism which so slur the absolute differences between good and evil that in their Name one could justify the sort of crimes which were committed in the concentration camps of Germany. And it’s interesting too that certain people accused Jung also of Nazi sympathies. Because he too would not subscribe to the absolute state of a war between good and evil — going down to the very roots of the universe. Obviously, when certain crimes and catastrophes occur human emotions are deeply and rightly aroused. And I would, for myself say that were I in any situation where an Eichman was operating I would be roused to a degree of fury that I can hardly imagine my present existence — but I know it would come out from me. I would oppose those thoughts of villains with all the energy that I have, and if I was trapped in such a situation I would fight it to the end. But at the same time, I would recognize the relativity of my own emotional involvement. I would know that I was fighting a man like Eichman, in the same way, shall we say, as a spider and a wasp — insects which naturally prey upon one another

and fight one another. But as a human being I would not be able to regard my adversary as a metaphysical devil, that is to say, as one who represented the principle of absolute and unresolvable evil.

And I think this is the most important thing in Jung — that he was able to point out, that to the degree that you condemn others, and find evil and others, you are to that degree unconscious of the same thing in yourself — or at least of the potentiality of it. There can be Eichmanns and Hitlers and Himmlers, just because there are people who are unconscious of their own dark sides. And they project that darkness outward into say Jews, or communists or whatever the enemy may be and say “there is the darkness” — it is not in me, and therefore because the darkness is not in me I am justified in annihilating this enemy, whether it be with atom bombs or gas chambers or whatnot. But to the degree that a person becomes conscious that the evil is as much in himself as in the other — to this same degree he is not likely to project it onto some scapegoat and to commit the most criminal acts of violence upon other people.

Now this is to me the primary thing that Jung saw. That, in order to admit and really accept and understand the evil in oneself one had to be able to do it without being an enemy to it. As he put it “you had to accept your own dark side.” And he had this preeminently in his own character. I had a long talk with him back in 1958 — and I was enormously impressed with a man who was obviously very great, but at the same time with whom everyone could be completely at ease. There are so many great people, great in knowledge or great and what is called holiness, with whom the ordinary individual feels rather embarrassed — he feels he sits on the edge of his chair and to feel immediately judged by this person’s wisdom or sanctity. Jung managed to have wisdom and I think also sanctity in such a way that what other people came into its presence they didn’t feel judged. They felt enhanced, encouraged, and invited to share in a common life. And there was a sort of twinkle in Jung’s eye that gave me the impression that he knew himself to be just as much a villain as everybody else.

There is a nice German word, *hintergedanken*, which means a thought in the very far far back of your mind. Jung had a *hintergedanken* in the back of his mind, that showed in the twinkle in his eye. It showed that he knew and

recognized what I sometimes call “the element of irreducible rascality” in himself. And he knew it so strongly, and so clearly and in a way so lovingly, that he would not condemn the same thing in others and therefore would not be lead into those thoughts, feelings, and acts of violence towards others — which are always characteristic of the people who project the devil in themselves upon the outside, upon somebody else, upon the scapegoat. Now this made Jung a very integrated character. In other words, here I have to present a little bit of a complex idea. He was man who was thoroughly with himself — having seen and accepted his own nature, profoundly. He had a kind of a unity and absence of conflict in his own nature which had to exhibit additional complication that I find so fascinating. He was the sort of man who could feel anxious and afraid and guilty without being ashamed of feeling this way. In other words, he understood that an integrated person is not a person who has simply eliminated the sense of guilt or the sense of anxiety from his life — who is fearless and wooden and kind of sage of stone. He is a person who feels all these things, but has no recriminations against himself for feeling them. And this is to my mind a profound kind of humor. You know in humor there is always a certain element of malice. There was a talk given on the Pacifica stations just a little while ago which was an interview with Al Capp. And Al Capp made the point that he felt that all humor was fundamentally malicious. Now there’s a very high kind of humor which is humor at one’s self. Real humor is not jokes at the expense of others, it’s always jokes at the expense of oneself — and of course it has an element of malice in it. It has malice towards oneself, the recognition of the fact that behind the social role that you assume; behind all your pretensions to being either a good citizen or a fine scholar or a great scientist or a leading politician or a physician or whatever you happen to be. That behind this façade, there is a certain element of the unreconstructed bum. Not as something to be condemned and wailed over, but as something to be recognized as contributive to one’s greatness and to one’s positive aspects, in the same way that manure is contributive to the perfume of the rose.

Jung saw this and Jung accepted this — and I want to read a passage from one of his lectures, which I think is one of the greatest things he ever wrote, and which has been a very marvelous thing for me. It was in a lecture

delivered to a group of clergy in Switzerland, a considerable number of years ago. He writes as follows:

“People forget that even doctors have moral scruples and that certain patient’s confessions are hard even for a doctor to swallow. Yet the patient does not feel himself accepted unless the very worst of him is accepted too. No one can bring this about by mere words. It comes only through reflection and through the doctor’s attitude towards himself and his own dark side. If the doctor wants to guide another, or even accompany him a step of the way, he must feel with that person’s psyche. He never feels it when he passes judgment. Whether he puts his judgments into words or keeps them to himself, makes not the slightest difference. To take the opposite position and to agree with the patient offhand is also of no use but estranges him as much as condemnation. Feeling comes only through unprejudiced objectivity. This sounds almost like a scientific precept. And it could be confused with a purely intellectual abstract attitude of mind. But what I mean is something quite different. It is a human quality: A kind of deep respect for the facts — for the man who suffers from them and for the riddle of such a man’s life. The truly religious person has this attitude. He knows that God has brought all sort of strange and unconceivable things to pass and seeks in the most curious ways to enter a man’s heart. He therefore senses in everything the unseen presence of the Divine Will. This is what I mean by unprejudiced objectivity. It is a moral achievement on the part of the doctor who ought not to let himself be repelled by sickness and corruption. We cannot change anything unless we accept it. Condemnation does not liberate. It oppresses. And I am the oppressor of the person I condemn — not his friend and fellow sufferer. I do not in the least mean to say that we must never pass judgment when we desire to help and improve. But, if the doctor wishes to help a human being, he must be able to accept him as he is. And he can do this in reality only when he has already seen and accepted him as he is. Perhaps this sounds very simple, but simple things are always the most difficult. In actual life, it requires the greatest art to be simple. And so, acceptance of oneself is the essence of the moral problem, and the acid test of one’s whole outlook on life. That I feed the beggar, that I forgive an insult, that I love my enemy in the name of Christ. All these are undoubtedly great virtues. What I do unto the least of my brethren that I do unto Christ. But what if I should discover that the least

amongst them all, the poorest of all beggars, the most impudent of all offenders, yea, the very fiend himself — that these are within me? And that I myself stand in need of the arms of my own kindness. That I myself am the enemy that must be loved. What then?

Then, as a rule, the whole truth of Christianity is reversed. There is then no more talk of love and long suffering. We say to the brother within us: Rocca, and condemn and rage against ourselves. We hide him from the world. We deny ever having met this least among the lowly in ourselves. And had it been God himself who drew near to us in this despicable form, we should have denied him a thousand times before a single cock had crowed.

Well, you may think the metaphor's rather strong. But I feel that they are not so needlessly — this is a very very forceful passage and a memorable one in all Jung's works. Trying to heal this insanity from which our culture in particular has suffered. Of thinking that a human being can become hale, healthy and holy by being divided against himself in inner conflict, paralleling the conception of a cosmic conflict between an absolute good and an absolute evil, which cannot be reduced to any prior and underlying unity. In other words, our rage, and our very proper rage against evil things which occur in this world, must not overstep itself. For if we require as a justification for our rage, a fundamental and metaphysical division between good and evil, we have an insane and in a sudden sense schizophrenic universe, of which no sense whatsoever can be made. All conflict, Jung was saying, all opposition has its resolution in an underlying unity. You cannot understand the meaning of "to be," unless you understand the meaning of "not to be." You cannot understand the meaning of good unless you understand the meaning of evil. Even Saint Thomas Aquinas saw this when he said, "the just as it is the silent pause that gives sweetness to the chant — so it is suffering, and so it is evil which makes possible the recognition of virtue." This is not, as Jung tries to explain a philosophy of condoning the evil — to take the opposite position he said and to agree with the patient offhand is also of no use, but estranges him the patient as much as condemnation.

Let me continue further reading from this extraordinary passage.

“Healing may be called”, Jung says, “a religious problem. In the sphere of social or national relations the state of suffering may be civil war and this state is to be cured by the Christian virtue of forgiveness and love of one’s enemies. That which we recommend with the conviction of good Christians as applicable to external situations we must also apply inwardly in the treatment of neurosis. This is why modern man has heard enough about guilt and sin. He is sorely beset by his own bad conscience. And wants rather to know how he is to reconcile himself with his own nature how he is to love the enemy in his own heart, and call the Wolf his brother. The modern man does not want to know in what way he can imitate Christ, but in what way he can live his own individual life, however meager and uninteresting it may be. It is because every form of imitation, seems to him deadening and sterile — that he rebels against the force of tradition that would hold him to well trodden ways. All such roads for him lead in the wrong direction. He may not know it, but he behaves as if his own individual life were God’s special will which must be fulfilled at all costs. This is the source of his egoism, which is one of the most tangible evils of the neurotic state. But the person who tells him he is too egoistic has already lost his confidence and rightly so, for that person has driven him still into his neurosis. If I wish to effect a cure for my patients, I am forced to acknowledge the deep significance of that egoism. I should be blind indeed if I did not recognise it as a true will of God. I must even help the patient to prevail in his egoism if he succeeds in this he estranges himself from other people. He drives them away and they come to themselves as they should for they were seeking to rob him of his sacred egoism. This must be left of him. For it is his strongest and healthiest power. It is as I have said a true will of God, but sometimes drives him into complete isolation. However wretched this state may be it also stands him in good stead. For in this way alone can he get to know himself and learn what an invaluable treasure is the love of his fellow beings. It is moreover only in the state of complete abandonment and loneliness that we experience the helpful powers of our own natures.” ~

This is a very striking example of Jung’s power to comprehend and integrate points of view as well as psychological attitudes that seem on the surface to be completely antithetical. For example, even in his own work when he was devoting himself to the study of Eastern philosophy, he had

some difficulty in comprehending the, let's say, the Buddhistic denial of the reality of the ego. But you can see that, in practice, in what he was actually trying to get at he was moving towards the same position that is intended in both the Hindu and Buddhist philosophy about the nature of the ego. Just for example as the Hindu will say that the "I" principle in man is not really a separate ego, but an expression of the Universal life of Brahman or the Godhead.

So Jung is saying here, that the development of the ego in man is a true will of God and that it is only by following the ego and developing it to its full extent that one fulfills the function which this you might say temporary illusion has in man psychic life. For he goes on and says here, "when one has several times seen this development at work one can no longer deny that what was evil has turned good and that what seemed good, has kept alive the forces of evil. The arch-demon of egoism leads us along the royal road to that in gathering which religious experience demands. What we observe here is the fundamental law of life — an enantiodromia, or conversion into the opposite. And it is this that makes possible the reunion of the warring halves of the personality and thereby brings the Civil War to an end." In other words, he was seeing that as Blake said, "a fool who persists in his folly will become wise." That the development of egoism in man is not something to be overcome or better integrated by opposition to it, but by following it. It's almost the principle of Judo, not overcoming what appears to be a hostile force by opposing it, but by swinging with the punch or rolling with the punch. And so by following the ego the ego transcends itself. And in this moment of insight, the Great Westerner who comes out of the whole of tradition of human personality which centers it upon the ego — upon individual separateness — by going along consistently with this principle, comes to the same position as the Easterner. That is to say, to the point of view where one sees conflict — which at first sight had seemed absolute, as resting upon a primordial unity. And thereby attaining a profound, unshakable peace of the heart — which can nevertheless contain conflict. Not a peace that is simply static and lifeless, but a peace that passes understanding.

Unpreachable Religion

I have often made the remark, that it seems to me a great mistake to regard the civilization of the United States as a materialistic civilization, which is a very common assumption among the peoples of Europe and Asia. The Americans and especially that aspect of American civilization that we call the Anglo-Saxon subculture is constantly accused of being interested in absolutely nothing but material values. But it seems to me on the other hand that if you can make any really broad generalization about something so complicated as the civilization of the United States. That it is fundamentally an anti-materialistic civilization not perhaps so much by intent as in the general effect of its action that seems dedicated almost I might say to the United Nation and destruction of the material world. And to its conversion into a junk heap of unimaginable dimensions. I travel around the country a great deal. And more and more one sees. A thing that is called the growth expanding community is. An extension of something over the landscape. That sometimes is almost indistinguishable from a rubbishy. One goes down the main streets of all kinds of small towns. And it seems to be if you look at it. As you pass by in a car or in a train you just see a mass of all kinds of higgledy piggledy pieces of cardboard and pile, decked-up with neon lights and wire and automotive junk yards and. All sorts of parking lots and dumps of every conceivable type yes there are some nice residential areas out on the Kong but by and large we seem to be converting the world into a dump heap. I have called it the progressive Los Angeles-ization of everywhere from Honolulu to Nantucket.

Now, what is at the root of this why is it. That we don't seem to be able to adjust ourselves to the physical environment without destroying it. Why is it that in a way this culture, represents in a unique fashion the law of diminishing returns that our success is a failure. That we are building up in other words, an enormous technological civilization. Which seems to promise the fulfillment of every wish almost at the touch of a button. And yet, as in so many fairy tales when the wishes finally materialize they're like fairy goat they're not really material at all. In other words, so many of our products, our cars, our home, our food, our clothing, looks as if it were really the instant creation of pure thought that is to say is utterly insubstantial lacking in watch the connoisseur of wine cold body. After all, we've made the soil incredibly productive. But it's products so largely appeal to the I rather than the stomach. People have been saying all kinds of

people been saying this is by no means my idea my feeling. That vegetables and fruits and above all that simple bread, is just a kind of visually attracted to pith or foam rubber. And although it has all kinds of vitamins introduced into it what I think many of us want of our nutriments is not so much medicine as food. And in so many other ways, the riches that we produce are ephemeral and as a result of that we're frustrated with terribly frustrated we feel that the only thing is to go on getting more and more. And as a result of that the help the whole landscape begins to look like the nursery of a spoiled child who's got too many toys and is bought with them and throws them away as fast as he gets them...plays them for a few minutes.

Also we're dedicated to tremendous war on the material the basic material dimensions of time and space. We want to obliterate the limitations. We want to get everything down as fast as possible we want to convert the rhythms in the skills of work into cash. Which indeed you can buy something with but you can't eat it. And then rush home to get away from work can begin the real business of life to enjoy ourselves. And, you know, for the vast majority of American families. What seems to be the real point of life what you rush home to get. To. Is to watch. An electronic reproduction of life and you can't touch it, doesn't smell, and it has no taste. You might think that people getting home to the real point of life in a robust material culture would go home to a colossal bank with our knowledge of love making or a riot of music and music and dancing but nothing of the kind. It turns out to be this purely passive contemplation of a twittering screen. As you walk through suburban areas at night it doesn't matter in what part of the community it is you see mile after mile of darkened houses with that little electronic screen flickering in the room. Everybody isolated, watching this thing. And thus in no real communion with each other at all. And this isolation of people into a private world of that is really the creation of a mindless crowd. Some time ago, it occurred to me that. A crowd could be defined as a group of people not in mutual communication. A crowd is a group of people that is say in communication with one person alone I regret to say that you are listening to me at this moment not by constitute a crowd we're not really in full communication with each other and naturally it's terribly difficult to bring about mutual communication between a large number of people. But that is it does seem to me to be the essence of a

crowd and the thus of a community that is not a community not a real society but a juxtaposition of persons.

Now, one other thing that one notices about this anti-materialism is its lack of joy or I prefer to call it its lack of getting. A little while ago I was reading a book called motivation and personality by A.H. Maslow, who's Professor of Psychology at Brandeis. And he had amassed together a very amusing set of quotations from about thirteen representative and author originated American psychologists. And they were all saying words to the effect that the main drive behind all forms of animate activity was the survival of the species. In other words, all the manifestations of life are regarded by these men as intensely purposive, and the purpose and the value for which they strive is the value of survival. And Maslow commented on this that American psychology. As a result of its contact with the culture is over pragmatic over Puritan and over published. That no textbooks on psychology ever on psychology have chapters on fun and gaiety or on aimless activity or on purposeless meandering and puttering and so on and he said they are neglecting perhaps what may be. One whole and even the most important half of life.

In other words, it is a basic premise of the culture, that life is work and is serious. And herein lies its lack of joy. Life is real, life is honest. What do we mean when we say life is serious. What do we mean when we differentiate work for. Play. Well work it seems to me is what we must do in order to go on living in order to survive. And play is pretty much everything else. But now you'll notice that in this culture play is justified and tolerated, insofar as it tends to make our work more efficient we have the saying all work and no play makes Jack a dull boy but that really means dollop work. Play is recreation something you do to get refresh to go back and face the great problems of life. Now this is old and well but that saying, even to play. The play is necessary you must play I remember in England we used to have the institution of compulsory games in school as a result of which I developed an intense loathing for most of the games that we played like cricket and football and so on. They were forcing you to apply. And so in the same way the thought that. The supreme value is survival value. The thought, in other words, that it is absolutely necessary for us to go on living is a basis for life which takes the joy out of life and is really contra to life.

And I feel that I think biological process that we call life. With its marvelous proliferation of the numerable patterns and forms, is an essentially playful. By that I mean, that it doesn't have a serious purpose beyond itself it's in it's an art form like music unlike dancing. And that point of these art forms is always that present unfolding the elaboration of an intelligible design of steps and movements through time. That is not to say, that the goal is the present when you think of the present simply as a headline on a watch the immediate instant the present is that's only an abstract present. As for example, in listening to music. A person who hears a melody he doesn't hear simply a sequence of notes he hears the steps between the notes. A tone-deaf person hears only the notes what a person is able to hear music, he has is therefore steps in a certain order and this is what this diffuse present is what I would call the real office a call present. And I feel life is very much something of this nature. It is a play and it is its own end.

But now if you say to a form of play you must happen you've got to go on you immediately turn it into work. And you immediately turn it also into what we call colloquially a drag. Are we surviving as it had duty to survive in order that children may go on living well if we think that our children catch the same point of view from us and they go struggling along for the sake of that children and the whole thing becomes a fatuous progress to an ever-eluding future. And it is because I think fundamentally that we have this compulsive view of the necessity of existence that our culture is distinctly lacking in gaiety. Now it seems to me that this attitude rests on to further premises. The first is the idea of God that we inherit from the European Protestant and. To some extent Catholic and Judaic background. This conception of God as creating the universe for the fulfillment of His purpose is a conception of God Quite strangely lacking in either humor or joy. Despite some hints to the contrary in the Bible. But, they they haven't made very much impression there was a passage in the Book of Proverbs where the divine wisdom which is God's creative power is represented as playing but in the King James version that's translated rejoicing. Now to rejoice is something that one can do very properly you can rejoice by singing the more joyous him. But that's not quite the same thing as playful joy or gay it. In other words look at our church is symbols of our attitude to God. Must we not admit the fact that the vast majority especially of small

town Protestant churches in the United States, are absolute triumphs of architectural gloom. There is nothing in the remotest beautiful about them they have a calling windows of an indescribable brown yellow, motley stained glass. They have vanished wooden pews and pulpits and altars and hanging of plush and usually dock red or a dismal and unspeakable green.

I've looked at so many buildings lately of an ecclesiastical nature and muffle at the pure ingenuity for religious arguments that lies behind them. And this you see reflects the idea of God. As a very solemn serious father of the universe who's created the world for some purpose to which our attitude is supposed to be sort of a stiff as Marines looting the flag. It's something that more or less resembles an everlasting church service. And in view of the kind of churches we have for the most part plus there are exceptions but do the kind of churches we have this is exceedingly gloomy prospect for the spending of eternity. And, but unfortunately, this is the idea of God that is in the back of our minds. And that state of mind persists even in people who don't really believe in that kind of God anymore but for whom God remains a symbol for a sort of moral idealism in the same way that Uncle Sam is a sort of symbol of the people of the United States.

Now that's I think one root of the attitude the other root of the attitude is our conception of man. And this conception of man has the same history, because it comes from the same cultural roots as our conception of God. And this is of course the conception which Lance White has called the European dissociation the conception of man as an unhappy amalgamation of mind body spirit and matter. Ego and not-ego, subject and object known. And this concept of man has very curious consequence as I've mentioned a lot of them but one that I that strikes me more and more is that it's a non participated conception of man. By that I mean. It causes us to feel ourselves. As observers of life, whether that life is inside our own bodies or whether it's outside in the external world we are observers we are the subjects and all that is the object and that is to say it confronts us it stands over against us. And we are looking at it and in a way this is symbolized in our whole. Way of life in so far as it's and an object seems to be to confront the television screen which is non participative contemplation of something which has been impoverished in its material and physical reality. Deprived of say touch and smell and taste and so on. And so. Because we have great

expectations out of this contemplation whether it be of television or of mundane existence. But we are not with it. You see we don't believe we are our bodies. We say I have a body and we say I have instincts we never sound I am a body or I am instincts. And the body is that we allow ourselves to have a little bit pseudo I mean. There are elegant surfaces. The ideal body is I mean you know Marilyn Monroe it's an elegant surface, but it's not supposed to secrete sweat or it's not supposed to smell at all. It's insides or other improper and one is expected to give it attention in a sort of aloof way but spend one's life on the whole being as unconscious of one's body as possible. All right then, so we have a conception of ourselves which is estranged from our physical organism and therefore our whole life is a strange it is as I've said not participated. And this comes out in a very marked way in the current attitude off this subculture to sexuality. Because here, where we represent sex as a necessary instinct.

Now of course we all know, sexuality in this culture is the big thing. The sex really seductive is used to catch the eye, and to advertise anything and everything however remote it may be from. The sex to a process that advertises beer, it advertises automobiles. It advertises undertakers. Bakeries. Anything because it will catch the I know that the. The thing is made for the. Fall that sense. Which rests upon the surface of things. And thus it comes about that our attitude to sexuality is a superficial attitude. And again, a basically non-participative attitude. As I said, it's an attitude that's changed a bit in recent years we can talk about sex matters very freely. We don't. Have the proof of some of our ancestors but just the same although we can it's all good clean fun you know although we can talk about it in terms of psychoanalysis and we can admit that yes the sexual drive is a very necessary thing and some outlet has to be provided for it. We're not with it. It's become a duty. Look, for example at the McKinsey report. This in a way it was a very remarkable job but it's a catalogue off sexual that it's. As if. Just all Gaza was a thing. As if, in a way, we had to have this outlet in order to reduce tension in other words to get rid of the urge. But note that in speaking of an instinct like sex or hunger as an edge. That we've set it away from Ansel's we've represented it you see as an instinct of the body which drives the mind. And the mind is therefore moved to it. And it admits that it is unfortunately necessary to be moved by it but we say for example in teaching children about the birds the bees and

the flowers that nature or God has given us the sexual instinct, in order to make the reproduction of the species is attractive on the assumption that if it wasn't attractive we wouldn't do it on the further assumption that life itself is a rather boring thing which we have to be made to undergo by rewards and punishments. By the seductions of sex, or by the penalties of pain which ensue with disease and not living a healthy life but these rewards and punishments are regarded as extraneous as things which drive us. And therefore to the extent that we feel that this is. The sexual urge to eat or any other so-called instinct in so far as we feel that is an alien an animal thing that exercise is a compelling power over us and here the us is the cut off dissociated little ego inside the body that is driven around by all this. Then naturally, our fulfillment of these instincts is fundamentally lacking in zest. We say, sex is necessary. On the assumption I suppose that if it weren't it oughtn't to happen. And that goes back you see to our psychology about play play is only justifiable to the degree that it's necessary and play is only necessary to the degree that it felt as work all right the same attitude with regard to sex around that it's only justifiable because it's necessary. Either to reproduce the species Well some new fangled ideal such as rounding out a complete personality. No one seems to have the courage to admit that it's intrinsically a good thing and that the urge the basic biological urges are not mechanical drives, they are our own inmost wills. Why don't we get with it? If we got within ourselves. And really admitted. That we are organisms. We might also get with each other. There again I pointed out how little we actually get with each other how in this television world everybody stays at home and if you walk out in the streets in the evening the police stop you and wonder whether you're crazy and especially if you're not going anywhere because going for a walk that's deep. Listen specialise I mean a person has to have a purpose you see he must be going somewhere. And so. We don't get with each other except for public expressions of getting rid of our hostility like football or prize-fighting. And even in the spectacles one sees on the television. It's perfectly proper to exhibit people slugging and slaying each other. Oh dear no, not people loving each other except in a rather restrained way one can only draw the conclusion that the assumption underlying this is that expressions of Physical Law far more dangerous than expressions of physical hatred. And it seems to me that a culture that has that sort of assumption is basically crazy and devoted unintentionally

indeed, but nevertheless in fact devoted not to survival but to the actual destruction of life.

Laws of Karma

I was talking in the last program about getting rid of ghosts. And showing to what an extent, the so-called problems of life [are] the result of asking the wrong questions. And after all, getting mixed up and spending an enormous amount of effort. In trying to solve riddles that have no answer. Now you know, in Indian philosophy, whether it be Hindu or whether it be Buddhist. There is apparently a great life problem. And that is the problem of how the individual is to be released from what is called karma, k-a-r-m-a. Strictly speaking, the word karma in Sanskrit simply means action or activity. But. In popular Indian conception it has a more specific meaning than that. And it means something like our Western idea of causality. As the Buddha put it once this arises that becomes. And although I don't think he meant this statement in a causal sense nevertheless. When you look at how the ordinary people of India understand karma. It works out in practice as being a law of retribution. That is to say, if you are in good circumstances in this life, it must be attributed to good things you have done in times past. It in bad circumstances to bad things and so the individual has a conception, a kind of explanation of his lot in life by referring it to past causes. And so he believes, that when he can so act and so think. That he stops generating karma. He stops doing action that looks for a result. He'll be liberated. He won't have to be born into this world or other worlds again and again and again and again in the endless repetitious cycle which is called. Samsara the round of births and deaths. And so. The ostensible objective. Of the way of life. Of Vedanta, or yoga or Buddhism, is to stop this process going on.

Now, most interpreters of this philosophy whether they be Westerners or Asians, take this objective in a very literal sense. They understand that by doing all these complex spiritual exercises somehow the reality of being subject to karma and being reborn again and again and again is actually altered. But, I feel that something rather different happens in fact. And that is quite simply, that the individual comes to see, that this whole conception of karma, of cause and effect in other words governing his behavior and reincarnation is an imaginary and thus false conception. And I think for this

reason, there is a considerable parallel between a way of liberation and some of the effects of Western science. After all, you must realize that people living in the ancient culture of India felt that this theory of the world, this cosmology, was real fact. In other words, they didn't choose it as a belief out of a multiplicity of different beliefs it was say completely in the atmosphere just in the same way a certain things a perfect common sense for us. And it would be very difficult for them to think otherwise. I was talking in the last program about. How we at one time thought that the planets were moved by reason of being encased in crystal spheres. And at one time, nobody questioned this everybody thought so or everybody thought that the earth was flat. They knew it was.

And so for people for whom these conceptions are realities it's an extraordinarily difficult undertaking to get free of them. But I think that the liberation of man from this particular cosmology is parallel to the way for example in which. The state of scientific knowledge as it is today makes the cosmology of say Dante, extremely implausible. I mean nobody has disproved it nobody has shown positive evidence that there is no God on a golden throne that there are no angels and that there isn't a simple destiny of man in the afterlife of a choice between Heaven Purgatory and hell. And so on. Nobody has brought out any evidence that this isn't true. But of course you must remember, that one of the characteristics of all of what we might call metaphysical propositions is that the person who proposes them can never suggest what evidence could be offered to show that they weren't true. In other words, if you ask somebody who believes in the sea a stick God. What sort of things would show you that this wasn't so. You'll find you can't think of any. I mean after all if God came and told him that God doesn't exist this wouldn't be evidence that God doesn't exist. And that's about the only sort of evidence you could imagine.

And so in the same way, a group of psychoanalysts was asked a little while ago what evidence would you accept as proving that there is no such thing as the tipis complex and they couldn't think of any. So one always has to be rather suspicious of ideas propositions therians for which there could be no contrary evidence. So what in effect has happened is that the scientific description of the universe as we have it today makes that kind of explanation of it an implausible sort of explanation. It just somehow doesn't

fit, not the quantitative scale of the World As We Know It, but even the qualitative scale. And therefore it is simply dropped away. And it hasn't only dropped away for very many intelligent people because it seems implausible but also because it seems unnecessary he doesn't really seem to explain what it claims to explain. And therefore you see, to a degree, the world view of science has liberated many people in the western world from a cosmology in which they thought they were trapped. In which they thought they were hopelessly or pleasantly involved. And in just the same way then, the mental discipline of Buddhism, or Vedanta or yoga is likewise a way of seeing through. And realizing the shall we say fictional nature. Of the cosmology of ancient India.

Now as I said, this cosmology involved the conception of karma. And this in a way. Is crucial to it. Karma. I write it down again. From the Sanskrit root Akri, to do. And as I said Strictly speaking it means your doing. And thus in a way there are two senses of interpret it you might say there is the unreal sense of looking upon it as a law of cause and effect. Or a profound sense in which you interpret it as action. And when you say thus arises, This arises that becomes to quote the Buddha. You may take it to mean because this happened it is it follows It is therefore necessary that something else happens. But on the other hand, you may take that in quite a different sense. Instead of being a kind of chronological cause and effect one thing starting up another as for example when you arrange a row of bricks and they're all standing on end and. You push one down and then as a consequence all the others fall down. Not like that. But rather in the sense, this arises that becomes, of certain things go together. Like yes and no, figure and ground and all these various illustrations which I've used to show the principle of relationship or mutuality.

But let's think for a while about cause and effect and the idea that there is a kind of necessity in nature. I was talking also last time about the work of Ludwig Wittgenstein, and there is a passage in which he says there is no necessity in nature for one thing to happen because another has happened there is only logical necessity. And this again is one of these things that startles common sense. These ghosts who see the ghosts say of necessity of causal necessity is very very in firmly firmly entrenched in our thinking and when somebody suggests that it isn't really so, it's quite a shock. And so,

it's worth examining this conception rather closely. And see if we can lay the ghost of necessity.

First of all let's consider a few ordinary causal ideas. We say that any living creature must, of necessity, have food. And if it does not it will of necessity die. And here we seem to have a perfectly clear case of cause and effect. But if we look closely into what actually goes on. We shall find something rather different. What are we really saying when we say that any living creature needs food. Well first of all. A living creature is of course constantly absorbing or assimilating food. And when we say that for example does your food agree with you? Does the climate agree with you? This is really saying. Are you consistent with your environment. Do you go together. If you do go together with your environment of course you are there as we say you exist if you don't go together with your environment if you are not consistent with it you are not there. It's as simple as that. Now when we say, you see, there's an organism needs food. Of course, this is only to say that it is food. Because what happens you see when anything eats. Is that it transforms as much of the environment as is consistent with its own pattern into that pattern and what isn't consistent it either doesn't eat or it eliminates it. And so, what we call an organism is a constant transformation of food. Would into the pattern of the organism. And of course you could say describing it more elaborately this is the transformation of the pattern of the food into the pattern of the organism.

And so, the moment that the organism stops, all this process of transformation stops the organism isn't there and so long as it is eating it is still becoming food food is still transforming into it and this is what it means to say that it exists. Now of course, we are also likely to say oh this organism eats because it is hungry. Now I wonder what we're saying that. Is hunger something as it was some kind of power that moves the organism to look for food. I think again if we examine this carefully what we're saying is. That an animal eats because it is hungry what we're really saying is that it eats when it's ready to eat. And hunger is the initial stage of eating, it is a way of perceiving readiness to eat. And then again, when we say it dies because there is no food. If you look into this carefully what you are actually saying is. That when food is not in the environment and therefore is

no longer being transformed into the pattern of the organism then that pattern isn't there anymore. It dies.

But, you see what is happening here. All we are doing when we say because is that we are describing what is actually happening more carefully. In other words, the organism dies because there is no more food. If we simply say instead of this word because we simply say. The organisms death is the cessation of food being transformed into its pattern. You see, we've eliminated the word because. And this is actually what we're doing all the time when we explain things. We're not really describing their cause is. That seems to be what we're doing when we don't know the full nature of the event but what we're really doing is we're describing the event that puzzles us more completely. It seems to be a description of causes if we say say death is one event. And not having enough food to eat is another event if we split the two events in the first place then, it will seem that one event causes the other. But it's much simpler to say that all we're doing is we're describing the event called Death more carefully. And this makes it more intelligible. Because you see, while we separate events and say that one is the cause and the other is the effect it's always difficult to show exactly how. No the cause turns into the effect. We had the same difficulty. In trying to show how mines all spirits influence matter. If they were to substances a completely different order how does one work upon the other. And we found in other words, that what appeared to be an explanation wasn't really an explanation at all. If you ascribe, in other words, the intelligent activity of a human being which he manifests in such physical things as his action and his speech if you were scribe this to some altogether different kind of into your substance called a mind well how does it effect it. And this is a puzzle nobody was ever able to answer in just the same thing because when you want to know how a cause brings about an effect you have introduced a gap here, thinking that you were explaining something and as a matter of fact you have made the situation more puzzling than it was in the first place.

And so too, when we take such simple problems as what we call gravity I suspect this is another ghost. When we say, when I let go of a stone it falls to the ground that's a perfectly straightforward simple description of the situation but then if we add to that and say the stone falls to the ground because I let it go. Now let us imagine what evidence is there for causality

here. Let's see what evidence could we bring against it. Supposing, in other words, the world a situation were to arise in which I let go of the stone and it didn't fall to the ground it went up in the air instead. I think that if this happened, we should say that what I had had in my hand was not a rock but a balloon. Because you see it is part of the definition of rocks that when unsupported they fall to the ground things that don't behave that way aren't rocks. And so when we say that a released rock must fall to the ground, this is because that sort of behavior is part of what we mean by a rock. So the must in there, is not as a matter of fact something in nature it is something in the dictionary in the book of definitions. Because the objects that behave that way are so defined.

Take another illustration. The sun flower. Now the sun flower is so arranged that when the sun apparently moves across the sky, it keeps its face following it. And that is what it does. And now let's say a sunflower must turn its face to the sun. In this case, what we're really doing is saying that it turns its face to the sun is part of the definition of a sunflower. If the sunflower didn't turn its face to the sun it would be behaving like say a tool it. Or some plant that doesn't behave this way in the same way if it. Didn't turn its face to the Sun It might also say have Blue Leaves and this would make it in other words a different kind of flower which would have a different sort of definition. And so in this way. We manage to relieve ourselves of the fixed idea that there are such things as natural necessities that in other words nature is being pushed around by something that events are being pushed around by other events and that there is therefore this whole picture of what we call causal determinism. Wittgenstein also produces a rather interesting idea to explain, why there is not natural necessity and there is logical necessity which is a variation of an idea that I have sometimes explained in other ways. You remember that in discussing the idea the Indian idea of Maya, I have very frequently used the illustration of making sense out of natural formations by superimposing upon them a grid or grill. After all we think of the Newtonian grill say, or the three dimensions of space and the linear dimension of time and these are what constitute the coordinates what we call the coordinates the three coordinates of space and one coordinate of time now of course we know very well that the holes of space isn't full of rods or lines arranged to be a height and depth and. And so on there isn't such a thing as the process of time going

on and on and on there are clocks indeed. And when we say we time things we are comparing their behavior with talks All right so we have the. Events of life whatever therefore may be and then by superimposing the grill over them we may have as Wittgenstein points out, a mesh grill whose pattern is simply of squares like square paper in an arithmetic book or we could have some other pattern they could be circular or they could be triangular and any pattern will do so long as there are regular. And then you see, we are able to describe what we have seen through this pattern, in terms of the regularity of the patent. And so actually what we are describing when we describe natural laws when we describe causality or any kind of logical necessity, we are describing the regularities of the patent. And not regularities that our inherent in the structure of nature.

And so, it's important in a way to keep these things distinct. And not to confuse one with the other. And the confusion of the two, is in a way another of these ghosts I've been talking about. So, however, the human being elaborates patterns of this. Time. Language, for example, is an elaborate pattern with certain kinds of regularity and it. Just in the same way to our fingernails and our teeth. And our organs of digestion, and are also a kind of grid. And they're constantly as it were sorting out what is in the world in order to assimilate them to us and in the same way our words our language ideas are patterns which sort out the world. And we assimilate the world to these patterns so you take the idea of a triangle is probably nothing in nature which is a triangle perfectly Euclidean triangle but a triangle is a sort of approximation to things we can translate things that are probably approximately triangular into triangles. This is about we're doing. Converting nature into our pattern.

Symbolic and the Real

I'm talking about the symbolic and the real, and from the very beginning I have to make it clear what I mean by these words. I think one of the very best illustrations of the difference between symbol and reality is the difference between money and wealth—and a lot of people don't know the difference. Nowadays, we're all accustomed to shopping in a supermarket. And when we go there we get a great cartful of produce and groceries and liquor and what have you. You take it through the cashier's... gangway-

place—you know?—and she taps away on her machine, and she produces an enormously long strip of paper and tears it off, and says, “Thirty dollars, please.” And most people, at that moment, feel slightly depressed because they had to get rid of thirty dollars! And that’s [a] very strange and odd reaction, because you got rid of paper. And in exchange for this paper you got wealth: real edible food, usable things—riches—and you should go home in a very happy mood that you got this great bundle of stuff. But somehow, the loss of money hurts us a little bit.

The relationship of money to wealth is very much the same kind of relationship that words have to reality. But when I use this word, “reality,” what on earth am I talking about? If I produce any kind of object in front of you, and—the most convenient happens to be a piece of money; a quarter—and I ask you, “What is it?” and I show it to you, most people would say, “Well, that’s a quarter.” But, obviously, it isn’t. Because the quarter, when you say, “It’s a quarter”—“quarter” is a noise, isn’t it? Quarter: that’s a noise. It’s a noise you make with your mouth. What noise is this? [Alan flips the quarter.] That doesn’t sound like “quarter,” does it? You think it does? A dime would make the same sound. So, what this is is this, you see? [Alan points at the coin directly.] Just that! Like that, see? That’s what it is.

And so we would distinguish between a world of physical events—physical reality—and on the other hand a world of names, and numbers, and noises, and signs which refer to physical reality. And the fact that we can arrange this in this way, the fact that we can make symbols for the world of physical events, is the thing that peculiarly characterizes human beings, makes them different from almost all animals, and is the root and ground of civilization and culture. You can see, in other words, that being able to make a world of symbols standing over against the world of physical events depends upon being able to stand aside from things and look at them, and also to stand aside from ourselves and look at ourselves. There is something in the nervous system in man, some function of the cortex in the brain, which enables him to do just that.

There was a young man who said, “Though

It seems that I know that I know,

What I would like to see

Is the 'I' that knows "me"

When I know that I know that I know."

And that's what we call self-consciousness. And self-consciousness entirely depends upon something in us which enables us to stand aside from the immediate situation. For example, you may be happy. And in the middle of being happy you say, "My God, I'm happy!" That disconcerts some people, because the minute they begin to know that they're happy it starts to disappear. They wonder how long they're going to keep it. But, you know, if you were happy and you didn't know you were happy, wouldn't that be too bad? There'd be, as it were, nobody home to enjoy it. See, knowing that you know is like singing in the bathtub. Everybody has a good voice in the bathroom because the bathroom gives you resonance. It gives you echoes. It amplifies the sound in the same way as a great cathedral amplifies the sound of a choir. And so in just that way we have, as it were, an echo system inside our skulls so that we know when we're happy, we know when we're sad. And when we exist, we know we exist.

And that is simultaneously the grandeur and the tragedy of being human. Because along with knowing that you know [goes along with] all kinds of things, the most important of which is the knowledge of time. You know the myth of the Garden of Eden and the Fall of Man? That when Adam and Eve had eaten the fruit of the tree of knowledge, death came into the world. Why? It wasn't that there wasn't death before. All creatures in nature come and go, everything is born and dies. But for the first time, having eaten the fruit of the tree of knowledge—that is, having invented a system of knowledge: the world of symbols—people knew that they were going to die. A cat approaches another dead cat, he sniffs it and sees that it's good to eat, decides that it's not and goes away. Probably—although we don't know for certain—probably, the cat doesn't reflect: "I will one day be a corpse like that."

But human beings predict because they are able to think about events with symbols and words. They are able to see what the future will be. And we all believe—don't we?—that this is the most useful kind of knowledge that we

have: to know the future and, therefore, to be able to plan for it. To have your savings account, your life insurance, to plan for your old age. That's great. But at the same time it has very serious disadvantages, because the more you know the future, and are thereby able to control it, the more you realize that you can't control it ultimately. That you're going to come to a bad end. And so that's what makes human beings so strange. All human beings are, therefore, slightly anxious, slightly depressed. There's a certain kind of sadness in human nature which the Japanese call *aware*: a melancholy, deep down in us, because we know—in the words of the song —“But it all comes apart in the end.” And even diamonds come apart at the end.

And so it's a curious thing whether a human being is really a logical construction. It's a great question. Whether a human being is not actually a self-defeating organism, a creature who knows too much for his own good. Because—you know the proverb “What you gain on the roundabout you lose on the swings?” So with man: what you gain in power by having foresight and dexterity in controlling the world through symbols—what a price we pay for it! Because no one of us can any longer afford to be spontaneous. Imagine a life in which you don't have to take any provision for the future. You do just what you feel like on impulse. Now, you'd make many mistakes, and you might do things that would be quite fatal. Like a moth which can't distinguish between a candle and the sex call of a female, and so it flies straight into the flame and it blows up. Is that too bad? In a way, from the standpoint of the universe, it's a fairly good arrangement, because if this didn't happen there would be too many moths. And every time a moth plunges into the flame it's a sudden disaster. The moth isn't worried about this—I mean, it doesn't have anxiety about it before it happens—and the moth goes out, just like that. With a glorious explosion. And so, in the same way, all these creatures who don't think what to do next—cats don't lie awake at night worrying about what contracts they're going to have to make the next day, and yet, nothing can match the dignity of a cat when it walks, and when it licks itself. What a magnificent creature. So imagine a world in which there isn't any worry. There will be disasters, but you won't know it's going to hit you.

But we have figured out how to beat that world, how to last longer and to be more smart than any other creature on earth. But the price is anxiety. The price is lying awake nights. The price is having an ego, a thing in us that we call “I,” “my self.” A compound of all the memories that we have of our experiences; a history. When you are asked to give an account of yourself, what do you do? You give your, kind of, biography: where you were born, where you were educated, where you have been, where you have traveled, what things you are competent in. It’s your life story, it’s your history. And we learn to identify ourselves with our history. And that is a series of symbols representing the actual events through which we have passed in our lifetime. And that history is something with which we fervently identify ourselves. But all histories come to an end. And so the more we know about our history, about ourselves in that kind of a way of knowing, the more anxiety we have about the thought that this history cannot go on indefinitely. It cannot be a story of complete success.

Now then, I want to go into some of the properties of the human mind upon which this sense of our own existence is based. And the most remarkable property that we have which enables us to create a symbolic world standing over against the world of physical reality and, of course—may I just put in parentheses—when I talk about the world of physical reality, this is a symbolic noise. And many people, when they hear physical reality spoken about, react to it in terms of 19th century scientific mythology, which is that the world of material, of energy—the world outside human skins—is mechanical and stupid. That was one of the dogmas of 19th century scientism which carries on into the common sense of the 20th century. So when I say the world of physical reality, please don’t put any such ideas on it. We really don’t know very much about it at all.

So then, the ability—the peculiar ability—of the human mind that underlies being able to create a symbolic world alongside the world of reality—and, through this, to manipulate and control and play god towards the world of physical reality—the thing that underlies this is what we call consciousness. Consciousness is conscious attention: the ability to focus our senses on what we call one thing at a time.

Now, consciousness is, therefore, comparable to the use of a spotlight which casts a narrow, bright beam upon certain areas. We all were taught to use this as children because, when we went to school, one of the most frequent things our teachers said to us was, [loud clap] “Pay attention!” Because the children were doing this, and they were doodling, and looking out of the window, and so on—having a wonderful time. But the teacher wants to get you to be able to focus on a point. See? Now watch my finger. Who else does this, other than teachers? Who else does that? Hypnotists! Hypnotists and conjurers; magicians! They’re always saying, “Now, watch my hand. There’s absolutely nothing in it.” And when you watch the hand, you know, he’s busy pulling a rabbit out of his pocket or something. So teachers all do that. And the children comply by tightening their legs ’round the legs of the chair and frowning, and looking at the teacher with a fixed gaze, because by that the teacher will know—so children think—that they’re really attending.

Now, so you see, by this means we are taught to focus our awareness—that is, say, the total sensitive power of all our five senses—to focus it on certain areas of the external world, sometimes the internal world, which are called significant. What is significant? What is important to notice? Many of us—you know, let’s say men—go out to a luncheon meeting where all sorts of people are present and we’ve got some kind of business to transact, and we go home, and the wives say to the husbands, “Well, you were at this luncheon meeting. Was Mrs. So-and-so there?” “Yes, she was there. I sat opposite to her.” “What was she wearing?” “I didn’t notice.” See? He looked right at it, he saw right in front of him the dress that this woman had on, but he didn’t notice it. Because from his point of view it wasn’t significant. He might’ve been interested in what was underneath it, but not what was on top, so he didn’t see it. And so, in the same way, you can drive your car daily into town, and talk with a friend, and you’re absorbed in conversation, and you don’t remember—you don’t even think about driving. And yet, you go through all these complicated stoplights, you avoid all the other maniacs on the road, and you get in comfortably. But you didn’t notice it. Because there is an aspect of your total awareness that is not consciousness. It reacts, and it reacts intelligently, but it doesn’t enter into what we call the stream of consciousness: the stream of events which we focus on with our spotlight and consider to be important and significant.

So there are many, many different versions of what is significant about our world. The world, you see, is in many ways like a blot in a Rorschach test—I presume you are all familiar with a Rorschach test?—where you have an ink blot that is made by pouring ink on a piece of paper, and then folding it over, and then opening it up so that you get a symmetrical pattern. And the person being tested is asked to describe what he sees in the blot and, according to what he describes, the psychologists believe that they can evaluate his personality. Well, actually, the whole world is a Rorschach blot. It's all fundamentally wiggly. Clouds are wiggly, mountains are wiggly, plants and waters and, above all, people. People are peculiarly wiggly. And then the task, you see, of consciousness is to make sense out of it all, is to tell a consistent story about the wiggles so that we can keep track of them. And what happens is: in human society, our forefathers—the more persuasive among them—invented a story about the universal Rorschach blot, and they pounded their children and made them believe it, too. And so, now, we all accept approximately the same version of the thing. And so, by this method of attending to one little bit of the wiggle, and then another little bit of the wiggle, we can make sense out of the wiggle.

You see, you do it the same way—supposing, instead of a Rorschach blot, you have a piece of territory: you have the Monterey Peninsula. And on the map it's a wiggle. But if we superimpose over this map a grid, simply lines—north and south, lines of latitude and longitude—and then we describe where each wiggle is in terms of the numbers up or the numbers across of these lines, we can measure the area. Well, that's the basis of calculus. That's the basis of all careful, accurate description of our wiggly world. And so, by concentrating on the wiggles, area by area, bit by bit, we learn how to manage it, how to make sense out of it. Just in the same way, for example, your mouth has only a certain size and therefore you can't eat a whole chicken at once. In order to be able to absorb a chicken you have to cut it into pieces. So you get a cut-up fryer. And even then, you have to reduce it to bite-sized units so as to assimilate it. Well, in exactly the same way, the physical world has to be reduced to bite-sized units in order to be assimilated by our intellect. And those bite-sized units we call “things” and “events.”

There are, in nature, in the actual physical universe, no such things as things, and no such happenings as events. They're all invented by us in the same way as we invent lines of latitude and longitude, inches, meters, minutes and hours. They're all measures: they don't really exist out there. But we choose certain lines—for example, we choose the boundary of the human skin and we say this divides me from everything else. Inside this bag of skin is “me,” inside those bags of skin is “you.” And outside that is a foreign world that isn't me, that isn't you. But that's not true! The skin, from one point of view, can be said to divide us from the external world, but from another point of view it is exactly what joins us to the external world. The skin is full of pores through which we breathe the air. The skin is full of nerve ends through which we become sensitive to what goes on around us. And if, as a matter of fact, the air pressure outside the skin was not exactly fifteen pounds per square inch—if it was anything less than that—we'd blow up. The pressure inside would be too much for the outside. See? What we don't—we are carefully educated not to notice certain things, because once you start noticing it—in other words, using your spotlight to concentrate on certain areas—at the same time as you notice, you also ignore, you also don't notice.

Often I take a blackboard and I draw a circle on it. And I say to people, “What have I drawn?” And they'll say, “A circle,” “a ball,” “a sphere.” Very few people ever say, “A hole in the wall.” A few smart ones do. In other words, do you notice what's inside the circle, or do you notice what's outside? Because what's outside is just as important as what's inside. You know, the fundamental secret of life—I'm going to tell you this, and this is worth all your price of admission; it's the ultimate secret! The ultimate secret is: for every inside, there is an outside. And they go together, and you can't have one without the other. And that's the whole problem of metaphysics, of religion, of life and death, so be of good cheer. But normally, you see, the way we are trained to attend our attention is captured by the area inside just as it's captured by an object that moves rather than one that's still. In other words, if a mouse were suddenly to go skitty-skit across the floor here, everybody would notice the mouse. And I keep moving a little instead of standing still, like this, while I talk to you so that you will notice me a little, see?

Motion against relative stillness, the background of the curtain, captures our attention. And my figure against the curtain captures your attention. Imagine what would happen if the total consciousness of the curtain vanished and your entire field of vision was filled by me only. Then do you see what would happen? I would disappear, and what you would become conscious of as the thing presented to you would be my necktie, or something like that. See? So by that I mean the inside always goes with the outside.

Now then, the whole use of consciousness—this is the point I'm making—the whole use of consciousness is the isolation of certain areas which we pay attention to. And we pay as the price for that kind of attention ignoring what stands outside them. For example, most people think that space is nothing. Space is just emptiness through which we all move. Interstellar space—the space between planets, the space between galaxies—is nothing. But every painter and every architect knows that space isn't nothing at all. Architects sometimes talk about the influence of space upon behavior. And to the uninitiated this sounds like nonsense. And if you paint, you realize that you have to paint the space as well as the things in the space. In other words, if you work in oils on canvas, you have to work on the background. You have to paint the background in. And you realize, therefore, that it's something that's there.

Can you imagine a solid without a space 'round it? Why, you can't possibly do so! Can you imagine a space without a solid in it? You can't possibly, because you have to constitute the solid to imagine yourself in the middle of an empty space. There is no way of having a space without a solid just as there is no way of having a front without a back. They go together.

But we are trained by our education and by our language—by the patterns of thought which our culture instills in us—to notice the solid and ignore the space. So, in the same way, we notice ourselves as we exist inside our skins and ignore ourselves as we exist outside our skins. And that gives us our peculiar feeling of insularity, of being skin-encapsulated egos who feel ourselves to be different from, to confront, to meet an alien, external, and largely hostile physical universe. And this is the supremely difficult price that we pay for our ingenious ability to use symbols, and to divide the world

into the symbolic and the real, the significant and the insignificant, the important and the unimportant.

We have lost the fundamental physical elemental sense that every single one of us is the entire works, focused here and now. That is to say, every human being—every beetle, every mosquito, every living cell—is something that the entire cosmos, the whole universe, is doing in a particular way. Just as when you hold a magnifying glass to the sun, and you focus the sun as a vivid little point of light at that particular spot on that particular leaf, so every creature that exists is a focus, a special case of what the entire works of existence is doing. Only: we have been taught to forget that. By being concentrated on the here and now—who I am, what circumstances I'm in, what I'm doing, what's important for me—we get absorbed in it.

Supposing, for example, you got under a microscope some of the little animals that are working inside your blood stream. You would suddenly become aware through your narrowed attention of a great conflict going on. There's a thing with wild whiskers on it and eyes all over that's going to eat that thing, which is more humane-looking because it's only got eyes on one end. And you see this awful thing through the microscope about to eat that and you get panicky. What's the result going to be? What's going to come out of this? See? But from a larger point of view you realize that if that fight weren't going on, you wouldn't be healthy. Because the constant conflict of microorganisms at one level is, at another level, your ongoing life and health. But if you look at it intensely—I mean, if you concentrate and ignore the context of what's happening—you get involved in this struggle and think, "Oh! It's going to eat it!" Well, that's the situation we're all in. We're all absorbed in our daily success, our business opportunities; whether we're going to make it or not.

See, that's one of the great philosophical questions. There are really four philosophical questions: Who started it? Are we going to make it? Where are we going to put it? And who's going to clean up? So this "Are we going to make it?"—see?—arises immediately; someone has started it. And what they've started is this concentrated attention: looking at the little details. Those details are fascinating! I mean, you know, it's the details that matter.

It's whether a woman's nose goes this way or that way that determines whether she's attractive or not, whether she goes this way or that way that determines—you see? It's the details. And it's the details that differentiate between each individual personality. And we get absorbed in that. It's marvelous! Beautiful!

But unless you can keep the details in balance with the background you get so sucked into the details that you lose yourself. You lose your balance. And so, in this way, the narrowed attention gets you involved into believing that you—I, myself, ego—am just some kind of a thing inside this skin. I'm a sort of chauffeur in my physical body. And I believe that. It's a hoax, but I believe it. And the whole of society conspires to make you believe that. The whole of education is designed to give you that particular sensation. But it just isn't so. Because if every inside goes with an outside—like the head goes with the feet; you don't find heads without feet. You don't find cats that have tails but no heads. Only manx cats have heads but no tails. They go together. So, in the same way, a living organism goes with an environment.

But fascination with symbols—the fact that we can talk about the organism as if it were something separate from the environment, because we can talk about “I” as if I was something separate from you—hypnotizes us into the feeling that we really are separate. And so we lose the sensation of being really at home in the world.

You know, you might use an illustration: Here's a tree. A barren tree; dead branches. And from nowhere at all a bunch of birds come and alight on it. There they are: birds from somewhere else alighting on a barren tree. That's the way most people feel themselves in the world: human beings in a world largely composed of rocks, and fire, and electronic jazz which has no feelings, no sense of values, no intelligence. But we just live here by accident. The other image is the tree, again, that suddenly gives rise to leaves and fruit. What a different situation. But according to all our knowledge of the sciences—of biology, ecology, evolution, and so on—we are leaves on a tree. We live, we express—each one of us—a world which produces human beings in precisely the same way that an apple tree produces apples. After all, when we see the apple tree in the spring it has no

apples on it, only blossom. And in the winter not even any blossom. And you might go by the apple tree and say, “Just a tree.” And you come by later and you see the blossoms, and you begin to get interested. And then, later in the summer, you go by and it has apples on it. And you say, “Excuse me!”

So, in the same way, this solar system might have been visited ten million years ago by someone in a flying saucer from Alpha Centaurus, and he would’ve looked ’round and said, “Just a bunch of rocks,” and gone away. Now he comes back in his flying saucer again, and looks at us and says, “Excuse me! I see you were, after all, intelligent rocks. Because you are human-ing just as the apple tree apple-s,” you see? A world which does us is an intelligent world, is a human world. At the very least it may be something more. Goodness only knows what it might do next! But at least, you see, it does us.

Now this, then, is my moral: the ability to cut the world up into pieces as a result of our facility with symbols and words is marvelous. It enables us to analyze things, to predict the future, to see all the details and to bring out the value of the details. That is a wonderful thing. But you can have too much of a good thing. You need to underpin, to background this vision of the details with something to support it, otherwise you go insane. Otherwise you get lost in a detail. You get lost in a point. You get so absorbed that, as we say, you can’t see the forest for the trees: we can’t see the world for the selves. And this isn’t just a matter of theoretical understanding, not just grasping a new theory. We need to find ways in which our actual everyday consciousness—our sensation, our physical feeling of being alive—is so transformed that each one of us feels himself not only to be alive inside his skin, but also to be definitely, substantially identical with everything going on around him. So that when you move and talk to me, I feel that that’s just as much me as it is you. Because these are the facts. This is the way it is. The outside goes with the inside, and you don’t find them apart from each other anymore than you find the front of the coin without the back.

Look: supposing I’m interested in another human being, but this is a human being who thinks only about themselves—has no interest other than what is defined as themselves, socially. In other words, the interior of the bag of skin. Well, this is the most boring kind of person you could imagine. Has no

personality whatsoever, even though they're entirely concentrated on themselves. When I feel that a person has genuine personality—is unique, and different, and alive—that is a function of their interest in things outside themselves—in other people, in their ancestry, and so on. You know? It's wonderful to look at a person and say, "I think your background is... hmm... a little bit French, slightly Irish, touch of Yugoslavian." Wow! See? Then I'm beginning—the person might say, "Well, you're not talking about me, you're just talking about my parents." But you are your parents, you see? That makes you interesting. And then your interest in music, in fish, in birds, in trees, in clothes—anything you want to mention—makes you more interesting. In other words, the more related you are to your external world, the more unique and interesting you become.

My fingers—all of them move separately and independently, but only because they are part of the hand, and only because the hand is part of the arm, and so on. So underneath our marvelous ability to analyze the world through concentrated attention and through symbols—words which suggest that a tree is a tree. The word "tree" is different from the word "ground," and therefore it seems that the tree is different from the ground. But it isn't. The tree is the ground reaching up to grab at the sky. And, you know, enjoy. It's the ground swinging. So, in the same way, each one of us is the whole cosmos waving and saying, "Yoo-hoo! I'm here!" So that knowledge is necessary. That knowledge of being one with the totality is necessary to underpin and support the knowledge of being different, and unique, and individual. Without it, the individual goes mad. Crazy mad, not angry mad. Crazy mad, because he feels unsupported, and therefore he seeks security in the collective—that is to say, in religious or political merging of individuals into the crowd, into the mob, into the mass—to escape the terror of being alone.

Study of Asia

For the past six years, I have been involved in an experiment. Concerned with the introduction of the study of Asia into higher education. During this time, I have been brought into contact with almost every phase of the problem. Not only of the study of Asia, but other special problems of higher education as a whole. Everything from raising funds for vital and

imaginative but unfamiliar ideas through the appalling red tape of the academic system. To the intimate personal problems of the vocational counseling of students. But as a result, I have begun to have a vision of what the study of Asia might mean for the Western world. Though I am sorry to say that I have a good deal of difficulty in communicating this vision to others concerned with the formal area of Asian studies. At one end of the problem, I have been faced with those who cling to the utterly discredited notion that scholarly and intellectual pursuits are of no value unless they are. Rather platitudinously, obviously a practical. And at the other, with the pundits and pedants. For whom the study of a share means exhaustive research into the manufacture of Chinese writing ink between eleven forty three and twelve fifty two. Somewhere in the middle, lies the general impression that a shirt. Constitutes a formidable number of foreigners dropped by modern transportation into the next door yard. Folks with rather odd and backward notions which we need to understand in order to get along with them. Yet I'm forced to admit, that for me, this whole range of ideas about the study of Asian culture is intolerably boring and unfruitful. I'm very happy and very grateful that I have been born at a time, when the problems of Human Nature and Destiny have been particularly exaggerated and thrown into sharp relief. By an unprecedented development of human power. I feel that the peculiar direction of Western civilization has achieved something fantastically wonderful. It has given human beings the technical means of amplifying and exploiting almost every idiosyncrasy of which we are capable. And at the same time, of taking the most brutal hardboiled and realistic view of man's place in the universe.

Western science and technology have given us the H.-Bomb, the T.V. commercials and the modern hospital. And they have given us the most rigorous discipline. In looking at facts without wishful thinking. That the Western world at least has ever known. If I may put it in another way, I feel that Western culture, Western science philosophy sociology psychology and political theory. Have raised the basic question is the fundamental problems of human life as no one else has ever raised them. And they have raised them unintentionally quite as much as intentionally. This achievement, this if I may call in a phrase supremum criticalization of the human situation this sense of living always in the midst of a

cosmological crisis. Is the ultimately valuable if nerve-racking contribution of the West to human culture.

Because of Western science, we are seriously able to contemplate the imminent possibility of destroying life upon this planet. We are able to consider problems of human population and ecology of moral and ethical relativity of the relation of the individual to society are the deliberate control of the brain in mind of the conquest of disease and the lengthening of life of the displacement of thought and labor by machinery. And of the management of natural resources and to consider them in a way which has never before been possible. In short, we have the most acute, well-informed and sensationally telling ways of confronting ourselves with the most radical problems of man's relation to his world. Yet at the same time, this vast extension of human knowledge and power is accompanied by an increased awareness of being out of control, of lacking the wisdom necessary to deal with the enormity of our information and technical skill.

Now, it would be a rather silly oversimplification to say that the necessary wisdom for this predicament is to be found by looking to the timeless philosophy of the ancient East. This is another approach to the study of Asia which I have come to feel as nearly unfruitful as the others. It implies that what we need at this time is a sure guide, a sure authority based on centuries of experience. But my feeling is not that we are going to find any solution to these scientifically highlighted problems by resort to imported philosophers and cultural institutions. However weighted with the experience of centuries. The point is rather this: that having raised the problems of human life in such an acute and dramatic way what we need to do first is to examine the premises upon which these problems are based. To put it in another way. We need to take a clear and critical look at the commonsense and nearly unconscious notions upon which Western civilization is founded. We need to ask for example, whether the survival of human life on Earth is the basic measure of practical value. Whether there is any real meaning. In the idea of progressive improvement of the human situation. And whether any actual progress results from the increase in control of ourselves and our environment. We need to take stock of the fundamental goals towards which our natural instincts are supposed to lead. To find out whether what we want is what we want. Or what we have been

talking we want. We need to ask whether we really feel ourselves to be individuals, facing an alien environment or whether it is only through cultural conditioning that we think of ourselves as egos in bags of skin.

We need also I think to take a good hard look at our actual sensations of those highly marketable dimensions of time and space. And find out if the way we measure them actually corresponds to the way in which we feel them. These may be highly philosophical questions yet at the same time, they are brutally practical since they form the context and the fundamental incentives of all our technological, commercial, political and social activities. Now I know no better way of approaching these questions are finding out in the first place what our basic premises actually are, than by studying cultures which have grown up in relative isolation from our own. We do not have to agree with or copy these foreign cultures. We have only to use them to discover our own boundaries and definitions. For all definition is, by comparison and contrast. As one knows the shape of a figure by its contrast with the background Kipling who said that East is East and West is West and never twain shall meet, said also that he does not know England who only England knows Similarly we do not know what Western civilization Western culture is if we do not know any other. If we do not know what it is we cannot judge it we cannot tell whether it supposed progress is in fact progress or regress. But more important still we are not even aware of the fundamental premises upon which we act until we bring them into relief by contrast with others. And this to my mind is the chief reason for a study of Asia. It is to find out who we are and whether we want to be that way. And thus it is a started to be undertaken. Not as a narrow specialty. But in intimate relation. To the front of the problems of Western science philosophy and sociology. It is a study to be undertaken not in the exclusive company of professional Oriental us. But in the company of mines representing all the major branches of knowledge. And its purpose is to fructify and challenge these branches of knowledge by bringing their premises into focus so that the economist the political scientist the mathematician the psychologist and yes, the Professor of Commerce can discern more sharply the hidden presuppositions of their crafts.

A striking example of the sort of thing I'm driving at is the marvelous study of Chinese science and civilization, which has recently been undertaken by

a great English biologist Joseph Needham. Having achieved some notable research in the field of biology before he was even thirty. Needham devoted some twenty years to the study of China without giving up the pursuit of his interests in Western science. And in the past two months, he has published the second of what are to be seven large volumes of his science and Civilisation in China. A book which could never I think have been written by someone specially specializing narrowly in signology, Chinese studies. For it took a biologist a student of Whitehead. To appreciate the real value of Chinese ideas of the organic and non-mechanical order of nature. And thus to write one of the most illuminating essays ever written. On the nature of human and natural law. So that even such a professional Orientalist as Arthur Waley has called it not only an epoch-making contribution to the history of technology and general culture but also the best handbook on Chinese general history and geography that has appeared. Now, a work of this kind is a real expansion of knowledge. A splendid example of what Asian studies should really be. For just because Chinese science did not at all follow the direction nor have the obvious success of western science for this very reason it illumines the whole character and scope of Western science by contrast.

On the other hand, it seems obvious that no such expansion of human knowledge can arise from the sort of area studies or international relations approach to Asia now fashionable in American universities. An approach of this kind might be suitable for extension causes for the benefit of businessmen and consular officials requiring some knowledge of Asia for their political or commercial ends. But, to make such matters the main preoccupation of our study of Asia in education is to make it an intellectual backwater. It is of course obvious, that for political and economic reasons we need information and insight about the day to day problems of modern Asia. But surely, the supplying of such information is the sphere of the competent journalist rather than the scholar. But from the standpoint of the scholar or scientist primarily concerned with the expansion of knowledge and the enrichment of culture, Modern Asia with the possible exception of Japan presents a rather sad picture. As I suppose we should too had we suffered two hundred years of colonialism. Yet contemporary India and China, Persia and Arabia are producing little or nothing of the same intellectual interest as the fruits of their great ages in the past. Sad to say it's

hard to call to mind a single living figure from these parts of the world of the same intellectually creative stature as say Jushi, Nagarjuna, or Avicenna. Or of the men who conceived Ankor Watt, the Temple of Heaven of the Alhambra. One can but hope that they are present but as yet unknown to us. For such reasons then. Contemporary Asian culture. Contains rather little to stimulate the creative thinker of the West be he philosopher or physicist architect or surgeon. On the other hand, what Asia has achieved in the past is as I think Needham has shown are far more than merely historical and antiquarian interest. We have already seen the applicability of Japanese concepts of space, of design. Of the use of materials and architecture and even of the conservation of natural resources. But we might inquire for example, into the ideas which the Japanese physicist Dr. Kunijihashida acquired from studying the thirteenth century Buddhist philosopher Dogan. We might explore the uses of the Chinese language as the best kind of notation for expressing biological and field concepts which involve complex relational situations. We might ask whether the Indian logician Diginyaga had anything to tell us about the science of linguistics or semantics we might ask some questions about the type of experience from which there arose the astounding Islamic art of the Arabesque. And whether it has any connection with similar concepts of pattern or lattice which can be produced by lysergic acid. A new drug of considerable interest to psychiatrists. We might look into some Indian and Chinese ideas about the structure of personality, about natural law and social change, and ask whether they do not fit the course of events a little better than our own. But all this would be nothing more than a beginning. What I really have in mind, is a little like an experiment which is I think being conducted at MIT to promote inventive thinking. The process is to imagine intelligent creatures with body structure quite different from our own. And then to consider forms of architecture furniture technical appliances and even social institutions that would be appropriate for them a form of fantasy which produces many new ideas for our use.

Similarly, I would take instead of an imaginary body structure the basic premises of Asian thought and culture of various types and then ask now what would happen if we applied these premises to science and technology rather than our own. Perhaps this is like asking, what would happen if we built a house on water instead of a pond solid earth. But the answer would

be a ship. As a result of this inquiry I would expect to find directions of investigation and types of development and creative activity which we have altogether neglected. I might discover that a number of problems which we are failing to solve by technology are unanswerable, because they are at root meaningless questions. I would also expect to find out a great deal about the future development of an industrialised Asia. And I can't imagine anything more conventionally practical than that.

In short, I think it is clear that what is really the matter with our standard approach not only to the study of Asia, but also to many other lines of historical and cultural investigation. Is that it is horribly lacking in imagination. Of other scholars has become afraid of fantasy which is the very root of creative thinking. But our scientists are not afraid of fantasy we're not keeping a cold eye on facts in a lab they are reading Astounding Science Fiction or galaxy. They are not afraid of Dare we say it, meditation and calm and the contemplative useless life. At the Institute of Advanced Studies in Princeton, mathematicians may fool around for years with utterly abstract puzzles about n-dimensional spaces and no results are expected of them. For they have discovered that the human mind is fruitful almost to the precise degree that it is not compulsively trying to get useful results. Useful results are a by-product of pure play, pure imagination. On the other hand, the humanities, and some of the new sciences like psychology are trying to become more respectable by aping the rigor of the mathematicians without the imagination of the usefulness of Engineers. Without the pattering. Thus their departments are increasingly populated with Drudges is who are simply scared to death of not seeming to be academically sound terrified of publishing anything that is not in form and content as dull as possible and documented to death. Fortunately however there are still a few marvelously unsound people like Northrup and time B. who can produce vast and fascinating speculations like the meeting of East and West in the study of history but they're all men unafraid of losing the dubious dignity of a good academic reputation the same with young age eighty and psychology. Of course all institutions of higher education are increasingly dependent upon the government. Or upon the great corporations for their financial support. And these gentlemen want results and would like to see professors punching clocks and being productive. But this is seem to be quite so much the case as the academic world itself imagines. The Rand Corporation, the

brains of the Air Force has of all things philosophers on it's stuff. Bell Telephone has even Gerald Herd as a consultant. And especially in the advertising world, the new type of conference call that the brainstorm is spreading like wildfire the conference where the whole office staff sits around and fantasizes as freely as possible about any technical problem with no realistic criticism allowed. The children of this world are wiser in their generation than the children of light. So government and business are still telling the professors to get results quick it would seem perhaps that the men in charge are fuddy-duddies who because they have no imagination will soon be left out of the market.

So, to get back to the study of Asia why do we need on the academic and institutional level our situations like the mathematicians have a Princeton, and the behavioral scientists at Stanford we need places where well trained scholars and outstanding graduate students can go and play and forget for a while about being sound practical. They must not be told to go and play because we feel that this is really the best way of being useful and inventive. This isn't playing the game as the Hindu say that that would be like trying not to think of the monkey while taking medicine because if you think of a monkey the medicine doesn't work. No. They must simply be allowed to play. To be as fantastic, as contemplative as esoteric and as useless as they like. With a single proviso that they be men of proven accomplishment and learning in the first place. Perhaps but in one of two real screwballs to shake them up. Indeed this whole principle of the useful as the unsorted byproduct of useless contemplation pursued simply for its own sake is one of the major themes of Asian thought. Exaggerated indeed in Asia. But a real catalyst for the overpurpose of West. For purposeless action is one possible translation of the Taoist way literally non-doing, of not acting out of accord with nature which Lao-Tzu said that by non doing nothing is left undone. The sense of it is to act without seeking a result without pursuing a goal in the future. Without any self-conscious and affected attempt to be virtuous useful sound and constructive. For superior virtue is not deliberately virtuous Thus it is virtue. Inferior virtue does not let go of the idea of you thus it is not a virtue. Superior virtue strives not, and has no aim. Inferior virtue strives, and has an aim.

Return to the Forest

During the past few months I have been studying an extraordinarily interesting paper written by Joseph Campbell, whose name will be familiar to many of you as the author of a book on mythology called *The Hero With a Thousand Faces*. Joseph Campbell is also the editor of the post you must works of Heinrich Zimmer, which had been published by the *Bowling Green Foundation* and as a matter of fact an extraordinary amount of those works is his own original writings and they were compiled from Heinrich Zimmer's notes. But the particular paper I mention now was presented I think in one hundred fifty seven in August at the end on us conference in US Kona in Switzerland a meeting of scholars and philosophers and psychologists and scientists which gathers every year under the auspices of a lady who has for a long time been interested in the work of C.G. Jung. And the particular paper which Joseph Campbell presented at this conference was called the symbol without meaning it isn't published in this country as yet and only appears in the book for nine hundred fifty seven which was published in Switzerland. But I expect it will shortly be forthcoming in the *Ex UPS* from the papers delivered at those conferences which are published by the *Bowling Green Foundation*.

Now this particular paper the symbol without meaning is an exploration. Of an extraordinary phenomenon in the history of religions, which you might call the in the beginning the development and the dissolution of cosmologists of great views of the world under religio- philosophical auspices which are the, as-it-were, languages about the universe devised by various cultures. Now he distinguishes between two great phases in man's religious history. Which he equates with two styles of culture which predate our own technological style of culture. And these are respectively the hunting cultures and the agrarian cultures. And he points out that the kind of religion which is characteristic of a hunting culture is what now generally goes by the name of Shamanism although this particular word is a distinctive of Mongolian styles of so-called primitive religion nevertheless the phenomenon known as shamanism is found distributed all over the planet.

Shamanism is characterized by the fact. That it's a very individualistic type of religiousness that is to say the religious experience of the shaman is not something which he gets from an authoritative priesthood is not something

handed down from generation to generation. For which he goes to a human teacher. The Shaman is a solitary medicine man. A man of power. When variably has to find his experience for himself. Usually it is by going alone into the dangers of the forests or jungles. Or holing himself up for some days in his own heart and undergoing some kind of ordeal. Not necessarily on the physical level so much as on the psychic level going through an adventure in the psychic. Well the world of spirits and when he comes through the ordeal. He comes out and initiate of. The reason why one must a tap so much importance to the individual character of this experience is that it goes along of the general style of a hunting culture in which every individual man contains the whole culture. That is to say, [it] is not the kind of culture in which specialized functions on needed in which there is a division of labor the hunter spends much of his time on his own. And he has to learn to take care of himself in the forests without any other human aid. And although there are societies and social groups there composed of men with women and children men who are equals because of the type of life that they follow.

Now an entirely different state of affairs arises when we get a settled agrarian culture. Here because the style of life is more complex, a division of labor is required. And you begin to get not only a separation of human beings into various costs and various functions, but also the necessity of devising far more complex complex languages and institutions to provide communication between them. And this always involves a very very powerful socialization of the individual. Spending his time more and more in a settled place and therefore having greater intercourse with other people, he has to learn to think in accordance with common patterns. Whether these patterns be based on language or on the type of work, the geographical features of the area which he inhabits or whatever they may be each individual has to subordinate himself more and more to a socially implanted view of life. Because only on these are these conditions as communication between the individuals possible.

And so it comes about that the style of religiousness which one associates with an agrarian as distinct from a hunting culture is a traditional and authoritative style of religion in which the individual derives his experience from a tradition usually embodied in a priesthood. And the Campbell goes

on to point out, that the first historical instances of the appearance of the familiar circle symbol which is called in Sanskrit the Mandala is associated with the agrarian cultures. No example of this kind of symbol is found archaeologically. Prior to the development of an agrarian community. Now I might say something about the Mandala as a world mythological symbol although anybody who's studied the works of C.G. Jung is very familiar with it. A mandala is essentially a circle, really divided into four quarters or multiples of four, and has in it as it were the general theme of the integration. Of a community. It is not unlike for example a stockaded. Village or city. A ring of defense around. Senta. And Campbell shows that the symbol represents the formation of the kind of society we're talking about where. The human functions are divided and we find in many of these ancient societies that the functions are precisely divided into four. Four groups. Just as in medieval Europeans society we had the spiritual power, the priesthood. The temporal power, the nobility. The Commons and the serfs. And so, in ancient Indian society we had the Brahmana, the priesthood the kshatriya caste, the rulers and soldiers. The vaishya caste, the commoners or merchants and the Shudra caste, the laborers.

So these four castes, represented as it were, represented by the fall of divisions of the Mandala the common integrated encircled community. And, the important point that he makes about its religiousness is as I said that it was an experience carried down by tradition. And experience in which a priestly caste was the authority, and which had to be a common experience just because the whole style of life in a community of this kind depended upon communication. And we can communicate with each other by virtue not only of sharing a common language but also and more importantly by sharing a common view of the world, a common type of sensuous experience which is because why those who have the type of sent to us experiences which we call hallucinations and delusions do not fit easily into a community. But every so often, his paper goes on to show, social cosmologies, his views of the world held in common by societies tend to break up. And actually he starts the paper. In the fifteenth century when through the expansion of the Western world through not only exploration of the surface of the globe but greater knowledge of astronomy begins to break up the geocentric view of the Ptolemaic universe, the view of the world under which Christianity itself had come to birth. And this he looks upon as

a breaking up of the Mandala, a breaking up of the common all agree stable picture of the world by means of which men were able to communicate with each other, and a breaking up therefore which involves a disruption of all our means of communication. And a throwing of culture into a fundamental confusion. It is perhaps, if this be true, just because of the breaking up of a unified worldview. And an entry into the confused world of the relativistic world of modern thought. That the Western peoples have become interested in other and forma attempts to deal with. Life as it as it must be lived when. The Mandala as it were, breaks up.

For after all. The idea of going beyond the come in all view of the world and somehow managing to get along without it is not a new thing. And it's very interesting that in ancient Indian society and to some extent even still in modern Indian society, that when a man has done his work in the society and is able to hand over his caste duties, whether they be priestly or political or professional to his son or sons. That as I think you all know he as it were abandons the world. And gives up cost and becomes what is ordinarily called a sannyasin. We speak of that usually as holy man or hermit. Or a spiritual devotee of some kind but what is of particular interest in this connection is that the so the abandonment of cost is also called entering into the state of Varna trust path of honor prosper and Sanskrit means a forest dweller. And in this sense, the batter who gives up cost. Goes back as it were. To the style of life that predates the agrarian culture he goes as it were back to shamanism. And this is true not only in Indian culture but also in Chinese thought whereas the Confucian way of life represents the community development shop that is what the Mandala corresponds to. The enclosed nice little tight little world. World in which we feel we understand each other understand our environment. In China. And the Taoist philosophy corresponding to the Indian. Search for liberation or Moksha liberation that is to say from the socially conditioned view of the world and. There is evidence to show that the dollars solitaires say. Has. Some sort of ancestral connection with the shaman. And it is possible that the words from Ana in Sanskrit and Sherman and Chinese both have their origin in the Tom Sherman. And Bush Rama indicates the Sunyata and the man who has given up social life in the world and likewise the Sharman in Chinese is the lonely sage in quest of immortality who has gone by himself into the mountains and the forests.

Of course we should not suppose, that the entry into the stage of Ana Prost or the return to the forest by the DA is sages in the strict sense of the word or regression. It's no more aggression and when we speak of a wise man as one who has become again as a child we don't mean that he has literally become childish that he has forgotten how to think and speak and behave in human society. And in exactly the same way the person who enters in the stage. Van across the does not as it were become a wolf man a sort of wild savage who runs around in the jungle naked and wears no clothes and eats his food off the ground with his teeth he doesn't do anything of the kind but the some sort of analogy and other words between. Going back to the shamans religion, going back to the life of the hunter, and at the same time going beyond the place where we find ourselves in a society where the world view is a conditioned social pattern. And now in what sense and in just what way is this going beyond. And likewise, how does it apply to our own situation where we are not as it were going voluntarily beyond a nice clear. Or thorough Tate even comfortable view of the world but rather being forced beyond it by the very pressure of events by the uncertainty of our times and by the confusion. And instability of modern thought which offers us no secure and humanly comfortable picture of the universe. Well first of all it must be obvious that. One of the things that is principle involved by a social system of communication. Is that it is a form of what Korzybski has called time-binding. The whole possibility of thought and language involves a codification of experience. It involves. A form of thinking about life which is basically after all description.

Now, description is a way of coding. Putting into symbols the events that go by us. And as we begin to be able to put events into symbols we develop most peculiar powers of memory. It becomes much easier to recollect and to formalize what has happened to us and along with this naturally gives the ability to project our recollection into thoughts about the future course of events. And this apparently is something which. Primitive, very primitive types of human being in which animals do not do to any great extent. But the price that is always paid for this ability to describe and to prefigure what is going to happen to us is that it has a very very alarming effect upon our emotions. Because we are able by being able to think about all sorts of future possibilities to experience the emotions appropriate to those possibilities as if they were present happenings. In other words the civilized

man tends to be in a state of chronic worry and fear and anxiety because he is always confronted not with the simple actuality of what is happening before him but with the innumerable possibilities of what might happen. And since because of this his emotional existence tends to be in a chronic state of anxiety and tension. He loses increasing the ability to relate to the concrete world as it manifests itself to him in the actual present in which he lives he becomes so tied up inside that as it were the annals of his sensibility become blocked he gets a kind of neurological sclerosis a kind of inability to give himself. To be spontaneous to be alive with full joyous abandon thus the most civilised we become the most stuffy we get.

And therefore the various. Ways of liberating oneself from. A society of entering what the Indians call vanprastha, the life of forest going back to the forest when a person reaches a certain point in life when he says Now look here, I've had enough of all this I'm simply tired of. Making life not in the least bit worth living by going through the horrors, as to what might happen. Of going through all this in the name of efficiency and membership in the community let me for a while get away from it all and find out what the score is for myself I'm tired of being told what I ought to believe I'm tired of being told how I ought to see how I ought to behave how I ought to feel let me find out for myself who I really am. And so, these institutions of going back as it were to the shaman state of religion of getting away from the community interpretation of how one ought to think and feel, arises in very many great cultures of the past. Now they are arise therefore again today, and it's perhaps impossible and misleading to try and have what I would call authoritative attitude about this phase of man's spiritual exploration. Sometimes for example, when a person wants to find out who he really is, he goes to a psychiatrist and occasionally he will find a kind of psychiatry just who does not have an awful rotated view of what human health is and who simply helps the individual to find his own way. Other times unfortunately we will find the doctrinaire. Psychotherapists who think they know what an integrated healthy and normal human being is and to have a whole theoretic pattern of what is believed to be that it actual fact all of what are believed to be the actual facts of human nature the actual design of the psyche and they attempt consciously or subconsciously to wangle the patient into accepting this view.

Alternatively, we may get from the Orient accounts, books about authorities about their ways of liberation which in many cases however have tended to harden into an orthodoxy and to present a traditional spiritual experience just as if they were the kind of spiritual experiences which it is the function of that social office of the priest to impart. And thus, when we get Swamis representing an orthodox interpretation of Indian moksha or liberation or when we get. Even Zen masters are representing perhaps an orthodox Buddhist experience of seeming to represent one we should be suspicious because these are the kind of experiences which cannot be transmitted, which for their very nature are something which one finds out for oneself and which if they could be explained if they could be transmitted would not be the very thing which they are intended to be. Because they are discoveries of something authentic of something genuine or something which is first hand between oneself and one's universe. And thus it's in the nature of things that they can't be codified, they can't be made a factor in social communication.

And so it is that it is in a way fortunate, that we here in the Western world do not have too many authoritative or attentive masters and teachers to whom we feel we can now go for enlightenment more and more of us I think tend to feel that we are all alone together whistling in the dark that we haven't a Savior there is no statesman a clever enough to understand the frightful tangle of international affairs is already there to do anything very much about it there is no. A psychologist office issue an awful lot of us who really impresses us as having the last word on everything more and more each one of us are thrown on our own resources and this is to me to be a perfectly excellent state of affairs. So that we become in a symbolic sense, back in the forest. Like the hunter of old. Who is nobody around him to tell him how he ought to feel and how he ought to use his senses and must therefore make his own exploration and find out for himself. But you know, when you study the records of these self discoveries, the fascinating thing is. That there seems to be such a common measure of agreement between all those who find out for themselves. And yet always, the way in which he has to find out is not through seeking agreement with others not trying to find what others are found, but only to find what his own senses and his own direct experience tell him when he as it were goes into his in a closet goes into his own secret place. And asks for direct encounter with the

world. And no longer as it were looks out of the corner of his eyes to see if everybody else is doing with same thing and getting the same results it is in the sense that a person becomes in the truest sense of the word a self. And original authoritative source of life, as distinct from a person in its original sense a mask, a role that he is playing in a society.

Reconciliation of Opposites

It's always interesting to me to see how often psychologists and psychotherapists talk about the problem of reconciling opposites. Anybody who knows anything at all about the elementary principles of say of psychoanalysis, knows that according to the ideas of both Freud and Jung, own who are in a way the great patriarchs of what we call depth psychology that according to their ideas. There is a kind of compensatory relationship between what is conscious and what his unconscious in our mental life. And that to the degree that one is as it were light above one is dark below or to the degree that one is dark about one is light below. And it's often pointed out. That very many people who wrote the most scurrilous books such as Abile lead the most exemplary lives whereas on the other hand a lot of people who wrote very pious and holy books actually lead disreputable lives. And I think there is a great deal of truth in the way Freud so often points out. That what is expressed in the world of dreams is the opposite side of life to that which one is living consciously, and that therefore, the problem of integrating a person of making him whole. And it's interesting isn't it that the word is etymologically related to the word holy. But the problem of making a person whole is to get together has to apparently opposed sides. And underneath all this there is the recognition. That so many things which seem at one level to be opposed to each other are at another level mutually necessary.

And this is something that's terribly difficult for us to admit. We don't like the basic harmony which very often underlies things that we would rather prefer to see in opposition to each other. Take for example, the fundamental opposition of life and death. Isn't it perfectly extraordinary the way we manage to conceal or most people manage to conceal, the fact that they keep alive, by death. Day in and day out, after all we are constantly transforming dead animals and plants into the shape of our own organisms.

But on this kind of thing you know is conveniently put away the slaughterhouses somewhere in the back district or Chicago and we don't get to see what goes on. And of course we conceal deaths in so many ways the whole art of the mortician as he likes to starve themselves, is to conceal death. And therefore, because of the Death is constantly repressed. We begin to forget. How much life and death go together. And so, to the degree that we fail to recognize. The inseparability of things that we call opposites to that degree we keep running into problems that baffle us and that we don't understand. We don't understand, for example. How our unnecessary. Our enemies are to us. How the things that we fight against. Ass things which stimulate us to call out our images. And while in other words it seems to be necessary to muster or our strength to oppose the thing. If we should overdo it. And muster too much strength, and succeed in getting rid of our enemies, we might very well collapse. And I think that an insight into that fact. Underlies the celebrated sayings of Jesus Love your enemies. Interesting it doesn't necessarily say does it make friends of your enemy it says, Love your enemies. And fair something of this kind underlies. The very very usual idea in Eastern philosophy of the truth lying in the middle. In other words, in Confucianism, one of the cardinal principles of Confucianism is the so-called doctrine of the mean. And interpreted one level, this is rather just the platitudinous doctrine of moderation, that one should be moderate in all things. And in the same way, Buddhism is called the middle way. And that too, at a certain level level of interpretation means nothing more than that this is a doctrine of moderation used. In the Buddha's time, roughly six hundred years before Christ. Run of the main forms of. Indian spirituality whereas the search for liberation through extreme. Self-mortification. When Guatama Buddha himself was a young man. He was the son as you probably know of a north Indian tribal King in the clan of the suckers. And his father, had at the child's birth, consulted the soothsayers. And they had foretold. That he would either be a great monarch. Or else he would be. A brother. And the father didn't want his son you know to get mixed up in this religious business and did. Everything to encourage him. To follow in his father's way he surrounded him with luxury and Intel is to him. In a palace where he should never see any sight or hear any sound that would make him think about the so-called problem of life.

But the story goes that by chance. He caught glimpses of suffering, of Death, of disease, of poverty. And this so plague his mind he just had to find out. Rise such things should happen to human beings. And the story goes on to say that he finally arranged to escape from the palace. But he cut off his hair, shed all of his luxurious garments and donned rags. And became a mendicant. In other words he followed for seven years. Those teachers who said. That wisdom and peace ultimately lie only through its true mortification of the desires of the flesh. But after seven years, he found out it didn't work it hadn't brought him any peace at all. And so, after some time, during which he thought that he really had discovered the secret of the problem. He proclaimed what he called the middle way and as I said at a kind of low level. This signified simply, that on one level, the one it stream there was this. Mortification of desire and of the flesh of the other extreme there was hedonism the attempt to solve the prob. Him of life by getting as much since he was pleasure as possible. And so he took the middle way between these extremes. But that as I said is only part of the point. Because rap is the middle way. Really comes to is not moderation, it isn't compromise. But really, a profound understanding of the unity that underlies all oppositions. You know so often we think logically. That life consists fundamentally in oppositions that as it were conflict is the most fundamental reality that is we look upon life in other words as an encounter this happens in all sorts of different ways the encounter of spirit and matter, the encounter of mind and body. And also the encounter, of oneself and the world as if these things came from. Unimaginable distances apart and suddenly met each other and by reason of being as it were logically opposed to each other there is there upon conflict.

But obviously, there can't be a battle unless there's a battlefield. It's often said very difficult to arrange a battle between a tiger and the shark because they have no common field. Wherever there is a battle, preceding the conflict, prior to it underlying it is something in common. As the very fact that two people having a fight have something in common that there's something they both want to get and so fighting over what they want to get, they have in common. And because they have the same desire, they're the same kind of creature, they have that life in common. And so underlying every contest. There is a fundamental agreement. As in Alice, Tweedle Dum and Tweedle Dee agreed to have a battle. So, the real meaning of the

middle way, and Buddhism is often simply called the middle way, is to go down underneath conflict to discover harmony. And I would like to talk a little bit about two kinds of following of the Middle Way which have occurred in the history of Buddhist philosophy. And these might also be called dialectic. Now, the word dialectic has as it were, a sort of double sense. It's related to dialogue to a conversation. As say between a teacher and his pupil. The Socratic Method, the teacher as it were eliciting understanding from his pupils by a dialogue in which the teacher asks the right questions. That other side of the meaning of dialectic is that there are opposed positions. Thesis on the one hand, antithesis on the other and as a result of the dialectic between these two opposites we arrive. Live at a synthesis. And in both the senses of the word the middle way is a dialectic. As you know, Eastern teachers don't advertise for students. Because their basic attitude is really [that] they haven't anything to teach. That may seem surprising but it is based on the insight. That at the deepest level beneath conflict prior to conflict. Because it's prior to conflict. Life isn't a problem. This is a very obviously difficult thing to understand, but most people feel it is a problem. And therefore, constantly go around looking for someone who will tell them how to solve it. And so it is in this way that the Inquirer comes across the sage we'll say the Inquirer comes across going back now into the history of ancient India comes across such a man as the Buddha. And says to him, my problem is that I suffer, and I want to know how to stop suffering this was the whole problem with which the Buddha dealt and if we start from this raising of the question by the student we can then follow out the steps of a dialectic so that the student is brought to the middle way that is to say to the point where the conflict expressed in his suffering is reduced to the harmony that underlies it.

So the first thing that happens then is the student comes to question A comes and poses the problem. I want not to suffer. And the teacher answers with a counter proposition. And says You suffer because you desire. A lot of people think that's all the Buddha really said. That if suffering is the result of desire, all you gotta do is stop desiring and you won't suffer. Simple, yeah. But this wasn't the project all this was simply the first step in a dialogue. And so, the next step is that if the student takes that to be the answer he comes back with the question well, how am I to stop desiring? And so the next question from the teacher might well be do you really want

to. And this would make the student scratches head a little look as he realizes that [if] it's true, as the Buddha seems to say, that in order not to suffer one must cease desiring surely I want not to desire this is also desire. So to escape that trap the student must answer. Well yes and no. I want to make an end of the kind of desires that lead to suffering but I don't want to make an end of the desire to do that.

So the next step in the dialogue is the teacher says well suffering comes from desiring more than you're going to get. So don't desire more than you're going to get desiring more than you're going to get is or more than you have or can get that is anguish. And the student thinks that one over for a while. And then comes back with this question yes but supposing I fail in not desiring more than I have or can get Won't that lead to anguish too. And the teacher comes back with the proposition. Don't desire to succeed in this enterprise, more than you can succeed or will succeed. Now I wonder if you have been able to notice what's happening here? On the one hand, there is first of all we start from the student trying to control his desire, as a student and there is his desire, his hunger. And at each step in this question and answer, the Buddha as the master of the dialogue is taking the student to a higher level. At the lowest level the conflict is simply between his own inner appetites. And the state of affairs the facts of life as we call them the hard facts. But at the next step, he has made the student see that his own feeling is part of the facts. To put it in another way, if you learn not to desire more than you have or can get you are learning to accept things as they are. But among the things as they are your own feelings. And these may be as it were unacceptable or unpleasant feelings. So he turns the attention of the students' attention to the fact that all right. You've got to accept your own feelings as well so the student says Well supposing I can't accept my own feelings, he says well, don't desire to accept them any more than you can. And that goes up to another level.

And you see what happens ultimately as the conversation goes on. The student comes to regard his whole inner life his feelings he's become completely objective about them those become part of the world that was his problem. And he suddenly wakes up one morning to find himself in a very strange situation. He's thought that he stood opposed to the world he identified himself with his desires. And there outside him is a world that

negated him. Suddenly, all this is gone but a bit changed. His inside his desires his emotions is feeling and the outside world are all the same. And so well is left to the person who had the problem. He is reduced Of course for a moment to nothing but a witness. A kind of passive observer of an outside world and is only in a life and his feelings that they all go together. And at the last minute flip. Even the one who seems to watch it turns out to be all one, with what is being watched. It's another way of saying. To be aware of something you don't have to have on the one hand and never under known. The whole process can be described much more simply as a knowing.

The other form of dialectic is perhaps simpler to explain. And it's based on a form of Buddhist philosophy which originated about two hundred years B. a D.. Now in Indian logic. There are other called for propositions. The first one is yes. The second one is no. The third one is yes and no. And the fourth proposition is neither yes nor no. And these as a kind of fundamental classification of statements. That, we may say for example that the world exists. Or that it doesn't exist or that it both exists and doesn't exists or that it neither exists nor doesn't exist this sums up the whole possibilities of philosophy and other words this would be the person. Who is a realist, like say Aristotle or Sir Thomas Aquinas, who equates the ultimate reality of God with being. But this On the other hand would be a sort of Hume-ian standpoint where you would say there is no such thing as being that is an abstraction it's just a concept here is number three you would get a sort of Hegellian standpoint, of synthesis between being and nonbeing and in the fourth you would get the extreme nihilist agnostic skeptic or whatever.

Now then the point of this particular dialectic is that it is fumes that deep down every human being really clings to some such opinions, some metaphysical opinion which can actually be put under one of those categories. One might not think this. One thinks that most people are sort of an intellectual and don't think about these things and have no philosophy but scratch a human being carefully enough, and you will find out that there is some promise which he clings to further. And so what the dialectician does he waits for someone with a problem to turn up he scratches him to find out what is the opinion to which he most deeply clings. And then, because the nature of this dialectic is a philosophy for refuting any opinion

that anybody can hold the flaws of himself has nothing to say he says if you propose Yes I can show you that yes has no meaning without no. Any affirmation you make has no meaning without the denial. And by such means as this. He gets the person to become insecure. He doesn't know what to cling to. And as he looks for a new opinion to cling to to give himself a sense of psychological security, the philosopher destroys that one too, so that in the end he has absolutely nothing left to hang onto.

And this is actually, the bringing of a person to liberation and to health because it is clinging to life. That is at the root of anxiety and anxiety which in turn is at the root of all manner of discordant activities and problems. Once lets go and doesn't try to clinging to life with his mind, he is then released, and talked out of his own self-strangulation.

Problems of Preaching

Anyone who talks a great deal about religion has a hard time of it not being mistaken for a preacher. A preacher is a person who tells people, including himself what they ought to do. In order to improve themselves in the world. And there's a place for this kind of thing. For, within limits, our behavior and our circumstances can certainly be improved. But the limits are rather small. For the permanent gains of human reason and kindness of moral effort and social concern are palliatives rather than solutions to the great basic problems of being sensitive and alive. They redecorate the interior, but don't repair the fundamental structure of the house. It isn't that they're on important. Small, relative, limited gains are never an important. Often enough they represent immense effort and skill. And it would be simply ungracious and unfeeling to minimize them. Think of the energy and devotion of medical men which has increased our average life expectancy from forty five to sixty five years. Twenty years is a long time. Until it becomes the accustomed matter of course. Or until it begins to run out. Or think what this same devotion has done to get rid of physical suffering which is again the most marvelous relief. Until this relief in turn becomes the norm. And free from the struggle with physical agony of the mind becomes aware of the torturing potentiality of anxiety. Sometimes it seems that every victory over fear and pain, simply opens up new and subtler depths of suffering, as if man were by nature a self tormenting animal or as

if pleasure and pain were the inevitable terms of sense experience changeable in form but never in presence.

Perhaps it's true that part of the various zest of life. Lies in fighting endlessly against a limitless element of evil. Just as the fun of say playing cards lies in pitting one's wits interminably against the element of chance brought in by repeated shuffling of the pack. Yet perhaps this isn't a good comparison, for the physical and emotional shock of evil and suffering is hardly in the same class as mere disorder. It has a variance and a bite so intense that men often wonder if the game's worth the candle. Especially when it seems that in the end the victory will go to the side of destruction. For it's pretty cold comfort, to believe that despite the inevitable destruction of the individual, the race or life itself will go on and on if not here then on other planets in other galaxy is remotely forever. Remote is the word for to the extent that living organisms are individuals and feel as individuals this is other life. Each organism faces its death and destruction alone. And in this apparently final and solitary defeat, others are strangely helpless and far off. It's against this totally unavoidable eclipse of the individual that the games of science and ethics seem so small. And this is all the moreso, when the whole trend of moral philosophy has been to stress the value of the individual. And thus to make every man more and more conscious of his individuality. In this sense, moral concern seems to hinder as much as it helps. The Christian and Western conscience revolts at the callousness of other cultures. At the way in which Indians and Chinese have let millions of as a matter of course. But this Christian pity for others is rooted in the most intense awareness of oneself. It is the realisation that others are living selves just as I. And this realization, this valuation of the individual person ever more intensifies the sensation of being an individual and never momentum if I is the problem that to all outward knowledge the destiny of each and every individual is destruction. Indeed, sympathy, and love for the individual. Is an emotion so poignant and so apparently hopeless, that our culture is in many ways trying to withdraw from it. Accustoming ourselves to the statistics of violence so as to be able to think of Belsen and Hiroshima without going insane. And without technical powers this is a very very dangerous kind of insensitivity. But what's the alternative?

For most thoughtful people it seems to be less and less plausible that the individual is an immortal soul fundamentally impervious to destruction and the ravages of pain. And so to many it must seem that the intense consciousness of individuality is a luxury we cannot afford. And that sanity require as a swing back to the collectivist mentality, to the feeling that each man lives for the race and not the race for man. Thus one might easily assume, that all ideas about the basic unreality of the human ego so familiar to the student of Eastern philosophy are part of a general trend towards a collectivist and depersonalized view of man. Of, in the Western world at least, a reaction against the Christian valuation of the individual. Yet no one can go it all deeply into Indian or Chinese thought at its best, without realizing that it seldom idealizes points of view which are extremes of opposites reactive to each other. And this includes also points of view which are compromises between extremes. Eastern thought is generally speaking non-dualistic which in this case this would mean that it regards the individual and collective mentality is as equally beside the point. It isn't however quite correct to call this non dualist position Eastern, for this is to local and geographical. It is I think better to call it the standpoint of a certain level of spiritual inside of religion or whatever you want to call it which is in fact Universal however unusual it is east and only in the sense that it appears somewhat more frequently in the eastern spiritual traditions.

Now this is a level of religion which has little if anything to do with preaching with exultations to change oneself or the world as I've suggested it's not against such acts of exultations. It is not merely indifferent to them. It is in a difference here. But this is a sphere in which we must be awake and aware if moral and social concern are to have any point at all. It underlies ethical activity in somewhat the same way. That space underlies motion space does not of itself Force One to go left or right. But without space one can do neither. To put it in another way all concern for human improvement for growth and positive change is a matter of time. Of hopes, and ideals whose realization requires a future. But the deep level of religion of which I'm speaking is not a matter of time its concern is not with the relatively narrow limits in which man on the world may be improved or deteriorated saved or damned. It's concerned with the immeasurably larger and even limitless realm of situations which we cannot change. With the

universe as it was in the beginning is now and ever shall be the world without end.

This is at times an easy world to ignore. For we are naturally preoccupied with things which we can control with details and confined spaces upon which our vision can easily focus. But according to the Buddha this ignore and it's this ignorance is the root of our agony. Let it be said again however, that this eternal and uncontrollable sphere of things does not exclude or stand in opposition to the world of practical concerns. It underlies it, it interpenetrates it at every point. Perhaps the simplest most ordinary way of getting some Theel of it. Is to go up by oneself at night and look at the stars. At such a moment it's merely a superficial cliché to think in the face of all this immensity I do not matter. That isn't the point at all. As Basho said in one of his haiku poems, When the lightning flashes how admirable he who thinks not life is fleeting. The point is rather, that while the whole site of the heavens never fails to move us with its glory. We do not differentiate between good stars and bad styles. Nor between well and badly arranged constellations. Paraphrasing a Zen poem we might say, in the scenery of Heaven there is neither better nor worse. The shining stars are by nature some great, some small.

So also when we. Look at mountains we do not blame the valleys for being low nor praise the peaks of being high. The high peak implies the low valley and vice versa. Furthermore, the scattered constellations the outlines of mountains. The shapes of leaves and clouds always strike us as models. And are indeed the very prototypes of our notions of order and beauty. They don't copy all imitate our abstract theories of proportion and design these are just our feeble attempts to explain why they affect us. On second thought, beauty is not the right word. For what we feel in the presence of these things. It's too human, too moral, too good. What we feel is rather holiness. In its ancient sense of the all inspiring the wonderful the uncanny. From the most remote times the Heavens have given men this weird feeling. And this is doubtless why they have been thought to be the abode of God. Yet this gives a new twist to the old idea that by spiritual insight we find that heaven lies within us the point being that at a certain level every human being that lives is also holy. However good or bad, healthy or sick, interesting or dull. Every living creature is an uncanny strain. Almost other

to himself. So that he could say with the Psalmist Behold I am fearfully and wonderfully made. For looking within, we confront the same unknown, the same uncontrollable depth of reality into which we gaze outwardly when we look at the most remote regions of space. What's more, on the inner side, the deepest and most unreachable unknown of man is right inside the ego itself the very root of consciousness and will of the controller who is so impossible to control. Tennyson used to evoke the queerness of being an individual by repeating his own name. And the weirdness of I being eyes so spooked him that he passed into a kind of cosmic consciousness in which he felt the actual identity of the deepest inside of his ego was the father just outside of the stars. And at that moment, the feeling shifted from the uncanny, to a joyous and exuberance certainty that down at the very center he was not Alfred Tennyson, but that, as when the Upanishads say, tat tvam asi.

Now, unfortunately, all kinds of religious systems make this type of certainty this cosmic feeling. Into a goal which people ought to reach. In this way, it is dragged down into the domain of preaching and into the sphere of time something to be produced in the future. All kinds of cults implicitly or explicitly offer this experience as a hope. As a higher state of realisation into which you can move all grow in some tomorrow. Perhaps with the idea. That if only enough people felt this way the face of the Earth would be transformed. But this is a red herring. At this level religion has nothing to do with transformation. We are looking here at the way things are and always have been. At the secret glory of millions of people who lived and died long ago in what we should call the darkest ignorance. For at this level, religion goes beyond all human standards which is what louder meant when he said that heaven and earth are not humane. And that the Sage also is not humane. He sees that behind both the good and the bad of our social existence. There lies the immeasurable wonder of our natural existence. And I use natural here in the Chinese sense of spontaneous. The existence which comes about of itself and governed by the conscious will like the structuring of our bones. Ultimate religion is the recognition that this basic existence is infinitely more miraculous than any achievement of reason or art. The point is put very well in the words of an Arabian Gnostic mana emas known only for this single quotation. Learn whence is sorrow and joy and love and hate and waking though one would not and sleeping.

One would not and getting angry though one would not and falling in love one would not. And if thou shouldst closely investigate all these things, that I will find God in my self one and many just as the atom. Thus finding from myself a way out of the self. The same thought as expressed by the Taoist Chuang-Tzu when he says. You move but you do not know whence movement begins you rest but you do not know how you come to stay you eat but do not know how you taste. For all this is the mighty insistence of the universe. How can it be grasped or held.

Now, these are all ways of showing how the human being seems to transcend and surpass himself when he tries to find out who or what he is deep down inside. He cannot penetrate this inner world. It silences his clever intellect shuts up his thinking. For before one has done or achieved anything at all whether good or evil ones sheer existence is simply unbelievable. Myself almost scares the wits out of me. Because it's no longer little ole me. But the astonishing intelligence which I observe when I look at nerve fibers under a microscope. I haven't about heaven below stars above stars below all that is over under shell show happy who the riddle read it. Now, you cannot preach about Wonder. You cannot tell people that they ought to wonder. That they should be teased out of thought either you are all you want. Or you can say is look into yourself and you may be amazed or you may not. Beyond amazement you may realize that you are that or you may not. But if you can't see it by looking straight at it no amount of words will make it any clearer.

But there's no way of making a duty out of this kind of thing, because the whole point is lost when we try to be utilitarian about it. To make out that existence is good for us. For existence at this deepest level is not good for anything. It doesn't need to be. It's the which than which there is no whicher. This is why Aristotle said that philosophy begins with wonder. And that action ends in contemplation. Which is simply a more silent and in raptured kind of wondering. The fiasco of school philosophy as it's now widely practiced is that it permits no existential amazement I wonder it feels as a disease that descends upon us when we are not thinking clearly when words beguile us into asking questions that have no meaning, and so no answer. Well, schools have unhappily become institutions solely for teaching and explaining. And when they can't explain the school men feel

out of role, and abruptly change the subject. I don't say this to minimize the value of scholarship. The fragments which it adds to our knowledge are no less important than the relatively small improvements which science and art make to nature. All of which are also important. Because the more our knowledge and skill increase. The greater are our grounds for astonishment at what comes into being without our aid.

Well in short then, there is no need to anesthetize, to blunt the consciousness of being individuals in order to make the human situation tolerable. There's no need at all to recondition men into some kind of collective all mass consciousness so that they can cooperate with each other and with the state like bees. The problem of the poignance and intensity of individual consciousness contains its own answer. For it is as it were, a brilliant concentration of light which just because it can foresee its own dissolution, can be vividly aware of existing now. And can wonder. As other forms of life apparently do not wonder. Just how it manages to be. And from what inner roots it springs. It is just here, that the restrictive and limiting quality of individuality, explodes through its own intensity. Because, when reflecting upon its own existence it finds that it's beyond itself beyond its own understanding and control. And thus, as much outside itself as the most distant stars.

Individuality therefore ripens into an altogether new sensation of selfhood and identity which I've been calling the recognition that you are that. As good a word as any I can imagine. For that indescribably holy and eternal something or other which we feel. When night enables us to look out into the whole immensity of our universe. I keep returning to this image because it seems to me to be so common to all of us. Incidentally, it's the image with which Dante concludes each of the three sections of the *Divino Comedia*. Perhaps, because it seems to convey more than his most elaborate symbols of the glory of God. Ultimate religion, the level of religion which lies beyond all ideals and improvements. Yesterday, today and forever is also the recognition that that is this where this refers to our every day. Monday in sensations to the stream of perceptions and feelings which make up an ordinary human life.

In the usual way, this realm of experience is regarded exclusively from the dualistic standpoint of good and bad success and failure. Pleasurable and painful. But now it is seen that the configurations of this well may also be seen in just the same way as the configurations of the stars. Without ceasing to be pleasurable and painful, it is also perfect and miraculous at every moment. No effort, no human contribution is required to make it so. But if we make any attempt to feel this to be so, the feelings so constructed will not only be artificial and shallow like all cultivated religiousness. We shall also fail to see. That our everyday feelings and experiences are miraculous just as they are before we make any attempt to recognize it. Once again this is no matter of a preaching for saying what ought to be done. There is nothing to do. For this is the way things are of themselves. Either you see it or you don't, and if you don't the very not seeing is also it. Of course we have bitterly afraid that any such view of our ordinary existence will obliterate the moral and social conscience. There are indeed people who adopt this as a philosophy to justify their economic status quo. I call this the wisdom of insecurity, for others. These dangers indeed exist for ultimate religion... like radioactivity, is a very dangerous thing. But as soon as a man knows that he is really free to be just what he is. That his existence is wholly of itself, beyond good and evil. Here is a man to whom we can preach and say listen, now that you are free this is what you ought to do.

Play and Sincerity

It often strikes me that one of the most fascinating conventions in the world is the Proscenium arch. The arch over the stage which divides, so-called reality from play. And extraordinary effects can be produced upon any audience, when the players put them in doubt as to where this art actually stands. As for example, when there was a murder on the stage which is all seems to be part of the play and then suddenly one of the actors calls for is there a doctor in the house. And then of course a prepared actor in the audience steps up on stage and the audience begins to worry as there actually been a minute on the stage or is this part of the play? And it's very fascinating to notice in how many dramas recently, the convention of the proscenium arch has been played with in this way. But behind that lines, running what is the home test and countered of sanity. In almost any society. A person insane I think if he gets the two news. As to whether rods

or action or gesture are intended seriously or intended playfully. And it's often struck me. That nobody really ever tells us how to interpret those cues. Of course, very often a father or older brother or an older friend takes a child aside and says now listen you mustn't take that. Seriously he was only teasing you or you mustn't say that sort of thing people will take you seriously. But taking that advice depends on the child's part in believing the person who tells and believing that it's not a lie, believing that what is said to him in this confidential way is set in seriousness and not in play. And a kind of panic can overtake us when we begin to be in doubt as to whether people really mean what they do, and sometimes we can even come to the point of thinking that the whole of life is a play. And get a very very curious sense of unreality. A sense which is as I said, sometimes to some people deeply unhinging.

The more perceptive we become, the more we become aware of what psychologists call our own ambivalence. The more term we become Don't fall. Of the seriousness of a great many things that we feel and do. The ability of the human being to be divided, to say one thing and mean another or to stand aside from himself as it were and inspect himself. The fact that we possess this kind of feedback, is of the genesis of this whole problem, of wondering whether we are serious or whether we are playing. A lot of people think that animals have no sense of humor. But they're always serious that is because they are unable. Perhaps to stand aside from themselves and be self conscious. When an animal plays it only. Plays perhaps in the sense of taking exercise or of enjoying meaningless activity. But the division of the split of the human mind. To be able to reflect on our own actions makes it possible for us to question almost everything that we do, as to whether we really mean it or whether we're only pretending. And this is of course aggravated by the fact that civilization calls on us in so many ways to pretend. To say Pleased to meet you when you're not. To say well have a good trip when you hope the person doesn't drown. I think of that kind. But as we become deeper in our self knowledge. We can very easily come to the point. When we wonder who we really are? A lot of people talk saying I haven't found myself yet I'm trying to discover what I'm really supposed to do in life. As if somewhere deep down in the center of us there is a real me. That is to say and I gave of ideas that I really meant

feelings that are really felt. Well no one has a completely honest call however many mosques that may be overlying it.

And as in the process of self knowledge we start peeling off these masks, there come sometimes the frightful moment when we may wonder whether there is going to be anything inside at all. Whether there won't be masks behind masks. Until real can of them all off and disappear like a peeled onion into just a set of fragments.

For very many people, the sensation of being in doubt as to whether there is any reality underneath, begins to provoke an extraordinarily strong sensation of guilt. After all, there is supposed to be the see something that we really do intend is something that we do stand for with all our hot. The possibility that there is something to which we could commit ourselves. Although perhaps something a little more than that is involved in the test of true sincerity because there are a lot of people, who will commit themselves to things in which they don't believe profoundly. There is the person who will feel for example that he's not. Anything special in the way of a patriot. He doesn't really believe in the righteousness of his country's cause, but he may nevertheless quite willingly go to war. And in this sense commit himself in a very very profound way to something in which he doesn't absolutely believe life often requires that we commit ourselves. Every time one walks out of doors and away you take a risk every time you ride an automobile I'll go on a plane you commit yourself. But obviously this isn't always an act of total sincerity it isn't an expression of something in which you believe with your whole being.

And therefore when the perceptive person begins to analyze himself. And find you know that behind organs there is an ostensibly loving and kind the activity is there's a very deep self interest when he starts questioning that self interest does he really love himself. And he finds that just because he's discovered that he always act in self interest it. Makes it very difficult for him to love himself. He may indeed despise himself. And then what is he got left what is the car in which he believes. And so he begins to be guilty. And to be oppressed. This is the course basically the same oppression that afflicted those great Christians like St Paul, St. Augustine, and Martin Luther. When commanded to love God with all the heart with all the soul

and with all the mind that is to say to love with an act of total sincerity they found themselves to be unable to do so. Or when urged to repent sincerely of their sins to have what theologians call true contrition. They found that beneath them a contract feelings lay fear of consequences or shame. Damaged pride or something of that kind and not true contrition. Based on the love of God at all. And then for such a person he wonders how can he possibly be saved what is there in him that isn't false. Is there really any solid core to one's being at all. But of course it's in pursuing that line. That there arises the kind of person whom we might call a saint. Because it is just, if he can go that far, it is just at the moment when he discovers that he's not is sincere about anything at all. It's at this point that he suddenly able to becomes and see or about everything. And the reason is. That when the point arises when he discovers a sort of total hollowness of his sincerity, he's also discovered at the same time the hollowness all the unreality of our apparent ability to divide ourselves from ourselves.

In the last broadcast I made I was discussing this problem in some detail. Trying to distinguish between an actual division of the psyche, into the knower and the known. The Thinker and the thoughts, the feeler of the feelings between that on the one hand. And every marvelous feedback system on the other. Which is simply the capacity of a perfectly unified pattern of psychic activity. To contain within itself patterns which represent its own form of states. And these. Memory patterns as we call them are of course inseparable from part and parcel of the total pattern of psychic activity at any moment therefore we are not really divided within ourselves into two entities at all. But when we seem to be so, and therefore, we are unable to doubt ourselves, then the capacity for calling not only for calling in question our sincerity but actually being insincere arises for a mind which is integrated which is not divided against itself, there is really no possibility of insincerity. And it is for this reason you see when, one begins to find oneself as it were only insincere. That the what is actually being discovered is the unreality of this division in the psyche. And so at the moment when the Saint finds that he is shall we say as bad as can be thoroughly. Corrupt through and through, as the prayer in the Anglican provokes as there is no health in us no that is holiness. Then at that moment, a kind of psychic flip occurs. And the person finds himself whole, all of a piece. Because he has, as it were exploded. The reality of his ego by finding

that his observing self the self that observes him self has after all nothing in it. It's only a pretense, an as-if self. It's as if I could look at myself as if I could separate myself from myself and observe my own motives and judge in a way. But I can only really observe in jobs and way as if motives never real ones. As it was soon as any psychic content any feeling any thought. Appears to be an object of knowledge and we begin to look into it the very act of looking into it as it were born as a whole in it and it becomes hollow by the very act of doing that. This is why one can interest. Specked almost indefinitely one dissolved oneself away and away and away. And if that arises a fear that this point then comes an unconscious block. If we are afraid of this discovery that we are totally hollow we think sometimes at last I've come upon something that I really am. And this may you see it just be an unconscious block to investigating any further. Whenever we encounter the solid. Whether we encounter it in the form of what we think is physical substance or psychological substance mind substance. This really means that we've encountered something which we haven't or are not going to investigate, because whenever we investigate the solid, we find structure and form and space inside it however closely in it.

And so in the same way, the person who finds that he has to go through that block and he is not content with the solid inner self which he discovers. And says now that at last is me I have really found myself I am someone. If he doesn't stop at that point it goes on. He'll come to the kind of valley of the shadow the dread passage where he seems to have disintegrated to nothing, to be a mockery all the way through to be nothing but masks. And then it's just in that moment as I said that there is a switch a transformation and. He becomes altogether real. To put it in another way, the distinction between play and seriousness disappears, when we find say that everything about us is play at this moment it becomes the same thing as saying everything about us is sincerity. I prefer perhaps sincerity to seriousness. I think seriousness death's appears altogether from a really integrated person. I was lovely remark which G. K. Chesterton made in his book orthodoxy. That the angels can fly because they take themselves lightly. Seriousness is having us it arises whenever we think we have hit as it were the solid substance of our psyche in a life. But when we discover that there is no substance there is only form and form in a way is analogous to, or parallel to, play substance to seriousness. And when that substance disappears we

find only form isn't it interesting how we use the word form as the outward shape the pretended thing the substance of the inner reality.

So when we find there was only the shape. Shapes of nothing, shapes around nothing hollows inside everywhere. However small however minute ultimately just hollows. Then the form itself. Shall I say becomes the substance. And action. Acquires a totally genuine quality. Play in other worlds and genuineness becomes an aim. And this is of course. Probably think inner meaning, the dramatic conflict of Hindu mythology, where the whole world is looked upon as the self-masking of God. The one God, playing the parts being the one acting in everyday life whether human or animal vegetable or mineral or whatever it may be the whole world seen as the leader playing of the Godhead. But of course when many Westerners hear that they think. Do use eyes and stuns phrase he doubted that God plays dice with the universe. Because you see, the something in the attitude of play that taken so far repels us a little. Does this then mean that the Godhead Brahma doesn't really mean it is he just playing with us is all this life a mockery. That you see, play in the sense seems to have the atmosphere of mockery. Are something deceitful. When it isn't one hundred percent play. It seems this way to a divided being who thinks that he can sometimes play and sometimes be serious. He doesn't realize that. There is a kind of play which is identical with total sincerity, where as it were, the proscenium arch of the psyche has altogether dissolved. We find this division. In really two kinds of people: the crazy man, and the profoundly innocent or wise man.

There's a story about the old Zen Buddhist monk and poet Riokan who really was the most astonishing innocent. He was playing hide and seek with some children one day. And he had to go and hide and he was waiting for the children to call it the children forgot all about it they ran off to their homes for dinner and real con because he really believed they would call him he stayed all night hiding behind a bush until someone discovered him in the morning. Of course, we can be wise and well and say well that's not very practical. Indeed no. But this is a wonderfully riveting story about an innocent man. Who was playing, you see. Playing a game with children and yet at the same time totally sincere. His playing, his sincerity being one in the same.

Parallel Thinking

One of the most surprising thing with that has happened to me in my study of Eastern philosophy over the years is to find that as I thought I was studying something that at first seemed wholly foreign to the western world. At the same time, I discovered all kinds of relatively new forms of thought and exploration of man's consciousness arising indigenously within the Western world which in various ways paralleled the approaches of Eastern philosophy to the problems of human life. Maybe this is related to the curious problem of what is called simultaneous discovery in science, about which some years ago the British by a physicist L.L. White, wrote an article in Harper's magazine. Showing how for example apparently quite independent investigators in various parts of the world engaged in scientific research hit upon discoveries at the same time. And of course in the scientific world this is usually explained. By reference to what is called the State of the field in other words if in a given field of science say a certain department of physics knowledge has advanced to a certain state a certain level and all the workers in this field off a million with this knowledge through the journals and other sources of information then because they possess information in common they are liable to hit upon the next step in several places at once and so you get simultaneous discovery of new things. However in some ways, the same thing has happened between east and west that is to say that at the same time that the West became aware of Oriental culture. It of itself, apparently developed forms of thought and forms of insight very closely paralleling things that had existed long before in the Asian world and the interesting thing is that these were in many cases developed by people who had no direct knowledge or contact with literature. About Asia and in this way there seems to be a dissimilarity between. What has happened in this case and what happens in the sciences. The apparently anti-metaphysical and even anti religious trends. Of what is called scientific comparison and sometimes logical positivism. Especially as this movement is represented in the early work of Ludwig Wittgenstein. The work say that he did about 1914. Contains some quite extraordinary parallels to developments that occurred. In Indian philosophy and logic between shall we say two hundred and seven hundred A.D..

And, again in an offshoot of these developments. In the field of linguistics and I'm thinking particularly of the semantic philosophy of Korzybski, and the metal linguistic thought of Benjamin Lee Whorf. There are even more striking parallels to some of the later developments of Buddhist philosophy. In other words the insistence on the distinction between, the actual physical world. And the forms of words, that is to say, of linguistic symbolism grammar, and logic one must recognize that these two things are in a way distinct and that you mustn't confuse the order of words with the order of reality you must keep clear the distinction as courtships key is to say between the map and the territory Well that's one development in the West striking a parallel to ideas that have been strongly influential in the east the parallel. Ways of thinking that exist. Between a Chinese Darwinist and Neo Confucian philosophy. And, the growth of ideas in modern biology. Joseph Needham has pointed this out of course and it is remarkable. History of Science and civilization in China. And incidentally he is himself a biologist before he devoted himself to the study of the history of Chinese science before even he was thirty years old he had made some remarkable discoveries in biology and he has pointed out. That the Darwinistic theory of nature and of man, is non-mechanistic, non-theistic but rather organismic, in the same way as the biological theories of people like Court Gilstein, Ludwig Von Bertalanfy. And Woodrow. In England. And also, the man I mentioned a little while ago biophysicist LL White.. And none of these people that I mentioned Goldstein but a man feared cetera and Needham before he began to study Chinese signs none of these people had had any direct contact. With the world of Oriental thought. But I think I should probably also included in this list of people advocating an organismic theory of the world and Whitehead.

So this is a very remarkable and apparently spontaneous occurrence within the West and well of types of thinking which are parallel to things which we find in Asia. The ones which I've mentioned are relatively well-known. There are those which are less well-known. And there is a kind of tradition. Existing in the West today. It's not very popular tradition. Because in the nature of these things they're not easily popularized because they're not easily expressed. In the times and in the languages of our mass media. But there is a kind of work which I have come across in the last few years which almost more than the work of the biologists that I've mentioned

resembles a Western version of Chinese Taoism. Now, before I say anything about it I want to. Stress in what way this kind of thing resembles Chinese Taoism. I've often drawn attention to a curious distinction between Chinese and typically Western attitudes to human nature. We're reared in the West with a rather fundamental mistrust of our own nature. To use a platonic analogy we think of man as. A sort of right on a horse to natured person who has a rational soul in an animal body. And the animal body is regarded as something vital but stupid. In charge of the rational soul, who's already been seem to be completely independent of those of the animal body. And so the whole problem in the task of human life is to subjugate the animal body to the rational will. And I, again have often drawn attention to the way in which this theory of man has persisted into the whole climate of opinion of modern science. Even though paradoxically enough, the basic philosophy of modern science, especially the behavioral sciences is naturalistic. That is to say it does not admit of there being two quite separate worlds the natural and the supernatural. But one world, at least ideal describable in one language. Simply the world of nature. Although that has been admitted theoretically in practice. The naturalistic scientist is tends to be a person who doesn't trust the natural order at all. But a person who still carries over in a sort of unconscious and habitual way, the old Judeo-Christian mistrust of man's animal nature as a province of the world, preempted, at any rate temporarily, by the devil.

Now therefore, it is somewhat alien to the west, and to Western traditions of thought, to see any sanity. In putting trust in the wisdom of one's own animal nature. Now of course, there were tendencies in this direction that arose in the eighteenth century and strengthened in the nineteenth century mark recall philosophy of nature and later the romantic movement in literature. But these I say, were associated with the work of Rousseau for example with his philosophy of the noble savage the idea that man was by nature free and as a result of the superimpositions of artificial social structures has been found everywhere in chains. And the sudden elements in this romantic philosophy of nature that nowadays we are apt to regard a sentimental. But nevertheless, we are I think beginning to come to a point of view whereby we must recognize. That although human nature is not something which if as it were were not interfered with would be entirely good which is that I think roughly the romantic point of view. But rather to

say something like this .The human nature as we find it is a and into play a balance of good and evil, of positive and negative. And that sanity consists in respecting this balance. See this is not a sentimental point of view. It does not ignore the fact, for example, that we live by destroying other organisms that there is inevitable conflict. In life, in its natural state but that this conflict. Is something which subset a higher kind of harmony and therefore has to be trusted or rather has to be supported accepted and contained. And that sanity consists fundamentally in this.

Now then, on the basis of this sort of attitude to human nature, there has been developed. A kind of movement in the West you would hardly call it a movement in any organized sense which seems to have originated in Germany. Some years ago in Germany there was a woman called Else Gindler. And she happened to have a serious case of tuberculosis. Her doctors told her that at that time many years ago. She died at the age of seventy about two or three years ago. That she was a hopeless case there was nothing further they could do for them that she may as well get ready for the end. She therefore took herself. I think the Black Forest. And. Found herself quite little hot where she could live in the forest alone. And she said. If this disease came by itself it can go by itself and she decided to make an experiment, that she would become as vividly aware [as] she could of all the subtle motions that were going on inside her body all the subtle little feelings that she had and she would respond to them.

And so in the quiet of the forest she became silent. And very very responsive to everything that was going on within her in the kind of inner life of her organism. And by doing this after about a year passed, she found herself recovered from the disease. And this so fascinated her that she explored the promptings of her own nature and explored ways of teaching it to other people. And eventually developed a kind of system of instructing others in this art. But nobody was ever able to think up a kind of label, or name for what this is of course. The Chinese would say this is the art of Taoism this is the art that is called in Chinese wu-wei, or non-interference. With the Dow that is to say with the costs of nature. But you see in describing the way that I was again I went about this it you can see at once that noninterference is a highly. A difficult thing requiring a great deal of intelligence you have to be patient you have to be intelligent you have to be

sensitive in order to respond to these subtle promptings of the organism itself. A number of people who were students of Elsa Gidler's came to the United States. And have, in various differing ways in accordance with their own particular personalities and approaches and style shall we say have talked of this kind of method I think particularly for example of Charlotte Silva who works in New York. Who also was a student of Elsa Gidlow. I've been looking at an article she wrote some time ago in the Bulletin. Of the generous amount expedient. In which she describes this kind of work is so fascinating because. The work of this kind. Escapes all classification which is in itself a mark of some kind of distinction so everything in this well has to be classified. People want to label you they want to say oh you're a Catholic or you're a Republican or you're a Buddhist or you're a beatnik or you're a Zen is or you're a psychoanalyst on whatever it may be because they feel that when they can put a label on you they sort of dismissed you they know where you are and what pigeonhole you're in and you can cause them into trouble. And therefore one can be deeply and creatively troubled by some kind of work. Well you can't quite call it philosophy which is impossible to pin down.

I've been familiar with Charlotte Silvers particular interpretation of else again as idea for some years. And in being asked often to explain it I've been completely dumbfounded to do so in just a short phrase. It isn't physical education, it isn't rhythmic studies, it isn't dance it isn't relaxation. It isn't body culture, or anything of that kind. It's a fascinating experiment in. Simply becoming ever more aware of one's physical organism. And learning to trust it. And learning to become in accord consciously. With what. It wants to do. And that wish all that want is ordinarily unconscious. And therefore, it's something that's very difficult to explain without actually participating in it, without doing it. But still, it's always been one of my particular attempts or efforts to describe the indescribable anybody who works with words poet author and so on is really trying to describe the indescribable this is the whole lot of speech and literature. That's I might introduce this by. A story which shall. Itself I want to tell me about herself and her study with else again. One of the things that Elsa Gindler I tried sometimes to get her students to do. Was to make a drawing of the way in which one feels one's own body. And when Charlotte first went to study with her. She was full of all kinds of funny ideas and when she was asked to

draw how she feels she made a grand drawing of everything about herself that she knew intellectually you see that she had all her bones and muscles and everything was put there in the right position with several people in the classroom and all the drawings were put up along the wall. Charlotte was stunned to see that none of the other drawings looked in the least bit like her own they were all kinds of funny lines and blushes and blobs and indeed one of them was simply a blank piece of paper with a small black spot on it. And she said that else again walked along the drawings making various comments about them and when she came to the one with a black spot she said Oh I see you still have that tension in your left hip. And Charlotte was expecting you see that at the time that I arrived at her she would compliment out on what a really sensitive drawing she had done of our own body. But when she finally approached that drawing, she said nothing passed right on. And that was a great moments that was one of those moments of truth in life moments of conversion when one finds out the difference. Between what you think you feel and how you really feel.

One of the things most strongly emphasized in this work. Is that we're all. Brought up. To try and conform ourselves to fix the patterns of what a human being or to be this happens in very many different ways but one of the ways in which it happens is how we ought to move and hold ourselves physically. We talk about postures, what is the right way to sit the right way to stand. How the right way to use one's hands and so on and so forth and of course it doesn't strike us that all these things are very stylized. And if they don't correspond in any way with what our physical organism actually wants to do. The adoption of these stylized postures is going to cause conflict. Between what we try to be and what we are. And since what we try to be has really no special virtue about. A lot of the postures that we adopt have no particular sense to them at all the sort of social rituals. I want to quote from Charlotte Silver's article in the general semantics bulletin, little story. She says, the other day I visited some friends among the guests there was a couple with their daughter a little girl of eight a thoughtful a very graceful child. While we were talking a little girl played in the garden I had the pleasure of watching how through the window. Then she came up stairs and sat down one leg hanging down the other one on the couch. Mother said. But how did how do you sit take your leg off the couch a gal never should sit like that. Little girl took her leg down on which occasion

housecoat flew high about honeys. The mother. Helen points got down one can see everything. The child blushed and looked down on a self-imposed house cut down but I asked why what is wrong. The mother looked attack quite shocked and said one doesn't do that. By this time the atmosphere in the room was completely uncomfortable the little girl not only had her legs down but have them pressed against each other a shoulders a gone up and she held her arms tight against out of the body. This went on, until she couldn't stand it any longer she suddenly stretched as Elf and yawned heartily. Again, a storm of indignation from her mother by now this all lasted about ten minutes the child had changed completely a gracefulness had turned into awkwardness all her motions were still, her little body was tense, she hardly seemed to be alive anymore. What will happen to this child? She will hold her on a happy pose for a few minutes before she shakes it off the next time my mother will admonished. She will hold it a few minutes longer and so on each time a little longer until at last she will have repressed her naturalness so deeply that she will have forgotten it. The mother will then have reached her go she will have educated had to be socially acceptable as a human being the child will be greatly inhibited, because as the mother will change in this direction she will change in a thousand other directions. End of quote.

And so you see, it isn't simply in. The social conditioning of the child is not simply a matter of. Training children in the fundamental conventions of moral behavior which perhaps are artificial but certainly necessary for some solace. Social cohesion and agreement about the training of children and all kinds of weird symbolic attitudes which I held to be proper and nice and ritualistically decent. Which produces in all of us, a state of chronic psycho-physical strain and discomfort which after a while becomes unconscious we fail to notice it but our it underlies our Also those are not irritations and frustrations which eventually build up into vast and appalling political idiocies. It's very difficult to get people to recover from this, because you see, in trying to come back to themselves, to come back to a unity and harmony with their own organisms they still have the cast of mind the tendency to look to authority of some kind to tell them what they ought to be. And Charlotte Silva has often told me that people who come to work with her. Expect to be told what kind of physical posture, what kind of physical feelings they ought to have. She says they want to know how to

move, how to stand, how to sit. In order to be exercised they're quite astonished at first when they're invited to become more restful to give up the doing so that they can listen better to what their body has to tell them. We need quiet for self experience quiet and awareness we need permissiveness to do all the subtle changes which may be needed. But we ask. We ask that. What can one feel of one's own organism want of happenings within not what one knows of one's body or what one thinks about it all believe somebody else expects one to feel off it but what one actually a sense is no matter what comes to the fall.

But this is difficult of course because. We expect that we are supposed to conform to a pattern. And that there is somebody who knows. What we ideally ought to be, ought to feel. And this despite, this is the curious thing this is the paradox this despite all the emphasis in the western world. On the value of individuality the value of personal uniquenesses and the differences between man and man. Isn't it strange that to fulfill this great ideal, this Democratic, personalistic ideal of the Western world. It seems to be very necessary for us to learn from the east. And from things like the East, to learn from the very great differences which exist between one individual physical organism and another. To trust what Charlotte Silver and Elsa Gidler used to call one's own inner. This is I suppose the most difficult thing. To explain in words because when we just think about it theoretically. All kinds of objections come up to it. And we think that there can only be sanity and only order in society by holding a club over ourselves as if we were naturally organically and physically, little monsters. Really, there is no monstrosity in nature, like the monstrosity of man. We talk about the violent life of the ocean's depth of the way the fishes eat each other and live in perpetual conflict. At least the fishes stay in the ocean and don't come up and attack the birds and the mammals and the people on the dry land. But nobody is safe from an. Radioactive fish in the Pacific. Birds, bewildered by turmoil in the skies. Insects ravaged. And upset in the balances. This is not a condemnation of human intelligence but an appeal to human intelligence. To be both intelligent and sensitive. To be temporarily at least, silent. Before the subtle movements of nature, to study them better. To work with the grain of the world instead of against it.

Man is a Hoax

Now, I'm particularly interested in what Dr. Weaver said about the attitude of the family to children. Because we have an absolutely extraordinary attitude, in our culture and in various other cultures high civilisations to the new member of human society. Instead of saying frankly to children how do you do? Welcome to the human race, we are playing a game and we are playing by the following rules. We want you to...we want to tell you what the rules are so that you will know your way around and when you've understood what rules we're playing by when you get older you may be able to invent better ones. But instead of that, we still retain an attitude to the child that he is on probation, he's not really a human being. He's a candidate for humanity. And therefore to preserve the role of parent or to preserve the role of teacher you have to do what they do in the Arthur Murray School of dancing, which is that they string you out they don't tell you all the story about dancing, because if they tell you you'll learn in a few weeks and go away. And you know it but instead they want to keep you on. And in just this way we have a whole system of preparation of the child for life which always is preparation and never actually gets there in other words we have a system of schooling which starts with grades. And we get this look creature into the thing with a kind of come on kitty, and we get it everyone is preparing for something that's going to happen so you go into the nursery school as preparation for kindergarten you go to kindergartners preparation for first grade and then you see you go up the grades to look at the high school and then comes a time when maybe if we can get you fascinated enough with the system you go to college. And then when you're going to college if you're smart you get into graduate school and stay a perpetual student and go back to be a professor and just go round and round in the system but in the ordinary way they don't encourage quite that they want you after graduate school or after graduation commencement as it's called beginning to get out into the world with a capital W.. And so you know, you've been trained for this and now you've arrived but when you get out into the world at your first sales meeting they've got the same thing going again because they want you to make that quota and if you do make it they give you a higher quota. And come along about forty five years of age maybe your vice president.

And you suddenly it dawns on you that you've arrived. With a sudden sense of having been cheated because it isn't that just the same as the fit life feels

the same as it always felt and you are conditioned to be in desperate need of a future. So the final goal that this culture prepares for us is call retirement. When you will be a senior citizen and you will have the wealth and the leisure to do what you've always wanted but you will at the same time have impotence. Rotten prostate and false teeth and no energy. So all the whole thing, from beginning to end, is a hoax. And furthermore some other aspects of a hoax just for kicks. You are involved, by and large, in a very strange business system, which divides your day into work and play. Work is something that everybody does. And you get paid to do it because nobody could care less about doing it in other words it is so abominable and boring that you can get paid for doing it. And the object of doing this is to make money and the object of making money is to go home and enjoy the money that you've made. With it when you've got it you see you can buy pleasure. And that this is a complete solace in money never to buy pleasure because all pleasures depend upon not putting down a symbol of power money but upon disciplines. In other words, now in Sausalito where I live, we have pier after pier of fine boats. Motor cruisers, sailing boats all sorts of things which nobody ever uses. Because they've been brought on the falling for the ad line that if you buy this thing you will have pleasure you have status you will have something or other but then they suddenly discover that having a boat requires the art of seamanship which is difficult but rewarding therefore nobody has time for it and all they do with the boats is have cocktail parties on the weekend. And in myriads of ways you see you go home you we're the wealthiest people in the world and you would think that having your money and go home you would have an orgy and a great banquet and so on but nobody does they eat a T.V. dinner which is just a warmed over airline food and then they spend the evening looking at an electronic reproduction of life which is divided from you by a glass screen. You can't touch it, you can't smell it then you look at this thing and you don't you have a strange feeling to see that the whole procession of grades that was leading to something in the future to that goody that God just as good it was lying at the end of the line. And it never quite turns up.

And this is because from the beginning, we condition our children to a defective sense of identity. And this I think is the most important feature in the whole thing that. A child grows into our culture and as I repeat this is not only Western culture it's equally true in Japan. But as an area which I

can speak with some firsthand knowledge. We condition the child in a way that sets the child a life problem which is insoluble. And therefore attended by constant frustration and as a result of this problem being insoluble, it is perpetually perspire on to the future. So that one lives one is educated to live in the future and one is not ever educated to live today. Now I'm not saying that you know the philosophy of carpe diem, let us drink today for tomorrow we die and not make any plans. What I am saying is that making plans for the future is of use only to people who are capable of living completely in the present. Because when you make plans for the future and they mature. You are if you can't live in the present you are not able to enjoy the future for which you have planned because you will have a new kind of syndrome a well by happiness consists in promises. And not in direct and immediate realisations so long as you feel that tomorrow it will come to see on a dollar bill, it always has promise to pay. It's a promissory note. And nobody ever can come across. Because the promise is tomorrow and does is the if we said common speech tomorrow never comes. But everything is based on the idea you see that you will get it tomorrow and you can enjoy yourself today so long as tomorrow looks bright. But Confucius once said, A man who understands the Tao in the morning can die contentedly in the evening. That is to say, if you have ever lived one complete moment. You can be ready to die you can say well. That was it that was the good that I've had it. But if you never live that complete moment, death is always the guy who like comes into a bar at two o'clock in the morning and says Time, Gentlemen please. And you say oh oh please one more drink not yet. Because you haven't really have the feeling that you ever had it that you ever got there.

Now then, the main the main factor in this kind of conditioning seems to me. To be as I said the way in which we give children a sense of identity. And in this respect we do something extraordinary odd. We define a person. Consider this for a moment this word person. Harry Emerson Fosdick once wrote a book called How to be a Real Person. And this in translation means how to be a genuine fake. Because the word person means a mask. The Persona, the mask worn by actors in Graeco-Roman drama which was a megaphone mouth mask so that through it Sunnah the sound goes. And so at the beginning of a place script you will see the dramatic personae the persons of the drama that is to say the list of the masks that the actors are

going to wear. But the word has so for them from its original use that to be a person has come to mean your real identity your true sincere honest self the person and we say of someone then he's a real person that means he's genuine. But we have confused, you see, the individual organism with the person with that is to say it's a role and we have defined the role of the person in such a way. That it condemns everybody so defiant to perpetual frustration. Now how is this so? When you are a child, you, your parents, your peers, your teachers, your uncles and aunts, are very anxious to define you. And what they are going to tell you is that you are a free agent. You are responsible that is to say you are an independent First Cause you are an origin of actions and thoughts and feelings and we can praise you or blame you for what you do. And above all we require of you that you love us. You love your parents you love your brothers and sisters as Fred said a child is not allowed to say to let that baby sister go back where it came from because that is not nice all nice children love their brothers and sisters and their parents not of course because we tell you to do so because you would want to do it yourself. You see now what's going on. You are required and commanded to do certain things which will be appreciated only if you do them voluntarily.

Now you see, when your identity is defined by society you cannot resist it. You don't have the knowledge you don't have the wisdom you don't have the resources to understand that something's being put over on you. You cannot but help believe the definition of you as a free agent. But you believe yourself to be a free agent as a result of not being free that is to say of being hopelessly unable to resist society's identification of you. So in the whole sense of our personality there is a contradiction and that is why the sense of ego of being oneself is simultaneously a sense of frustration. The feeling of 'I'-ness, so far as most people are concerned is a feeling of tension between the eyes and behind them. Trigon burrow a remarkable man did some studies about. Two kinds of awareness which we call die-tension and Co-tension in die-tentive is the normal kind of awareness that we have of being a skin encapsulated ego of being separate from the environment and of confronting an external objective world of which we are the independent observer. And this myth he said goes hand in hand with the physical state which is a state of tension between the eyes then he defined tension as another form of awareness which you might call a certain

kind of openness in which you realize. That the external world is just as much you as anything inside your skin. And that you are not something that comes into this world on probation and doesn't really belong this is you see the attitude that we foster in the child that you are something not that comes into the world but comes out of it in the same way as a flower comes out of a plant or a fruit comes out of a tree that you are an expression you as a human being are a symptom of nature. And that you really belong there and that other laws your actual self what is finally and fundamentally you is not. A separate and lonely pops of the world. But the real you is the world itself everything that is expressing itself as this particular organism here and now and of course as you look across the room as all these other organisms in the here and now we are all tits on the same solve by may put it so crudely or if you want to do it it was poetically, rays from the same sun.

Now, now, children very often lost their parents you see as a result of having been given this funny sense of identity. Mommy who would I have been if my father had been someone else? This is a very common child question, because the child gets the message from the parents using the English language, the French language, the German language or whatever, that I am somewhat in my body you gave me my body. But who am I to whom this was given. You can say to her go. Darling you're absolutely gorgeous you're so beautiful and she says How like a man all you think about is bodies I may be beautiful but that's my parents gave me my body but I want to be admired for myself and not for my sassy. And this poor girl is a chauffeur. She's alienated from her body. And she doesn't take any credit, doesn't assume any responsibility for being what she is physically and this is of course as much true of men as of women it is a common cultural attitude we say I have a body we don't say I am a body. We feel very sharp distinction in other words, between our consciousness, which is a kind of focused attention, together with all those actions that we are able to perform voluntarily. On the one hand and on the other hand everything both within us and outside us that seems merely to happen to us.

Consider for a moment breathing. Do you breath, or are you breathed? You can feel it either way. If you become conscious of breathing you get the sense that you're doing it in the same way as thinking or walking but if you forget about it it goes on and you don't have to do it at all that is why

breathing exercises are fundamental in all meditation practices in the Orient because you can understand through breathing and through the experience of breathing that there really is no differentiation between the involuntary experience on the voluntary experience. But when you make set up game rules whereby you identify all that you. Do voluntarily with you and all that happens in voluntarily with the other with what happens to you and then you put a gulf between these things not realizing and this is the secret that is never given away that self and other are inseparable. Just in the same way, that the front in the back of a coin are different but identical is all one can so in exactly the same way the experience of self and the experience of other mutually necessary you wouldn't know what you meant by self unless you knew other you wouldn't know of and this you knew what you meant by self they are therefore polarities like north and south pole of the magnet they're inseparable. But that secret doesn't get out because civilized language and thought. Ignores the fact. That all classes all logical classes and words are after all labels on classes, are so constructed that they are intellectual boxes and every box which has an inside also must have an outside. And we think that insides exist apart from outside and outside the pot from insides we don't realize that although they are opposed they go together. And you see that is the secret of the whole thing that is what the child is not let on to. And so instead the child is defined. As a stranger in the earth. And not as a symptom of it. And as a result of that we have the vast terrifying social problem of alienation of feeling that the world outside human skins is unfeeling, fully-automatic stupidity. Which we have to fight. And dominate, otherwise it will swallow us up and condemn us to the imaginary terrors of everlasting nothingness.

Now I feel in a way with it when we say I wasn't responsible for being born. You know, in one of the great problems of psychotherapy today, is passing the buck. By a kind of superficial Friday and attitude you as a juvenile delinquent are not responsible for what you do because it was your parents who followed you up and so they write articles in the press that instead of prosecuting the children we ought to prosecute the parents so they hold the parents some of the parents I know with mixed up with that was the fault of our parents. And it all goes back to a gag I called Adam and he blamed it on Eve, and she blamed it on the serpent. And God said about the serpent. And I'm not responsible for the serpent. He did it on his own,

because the because the serpent is the Left Hand of God. And what we call God Jehovah Jesus Christ etc That's the right hand but Jesus Christ sits on the right hand of the father nobody ever says it was it's on the left. Because Let not your left hand know what your right hand do it. See my temper got the better of me I didn't really mean it. My lust got the better of me. I am really not responsible for them they were given to me. You see now all this idea that. You see. We were laboring under a definition of the self. Which you think extremely is limited. So that we are for example, of knowledge, thinking and walking and we doing things with our hands and speaking. But we don't acknowledge that we are growing our head and beating our hearts. That is defined as happening to us but it is defined as something that happens to us and when you feel that most of my father's responsibility he had a dirty gleam in his eyes and went after my mother and so on, and he did it. Yes All right.

[audience] There is this point about responsibility, and one way of looking at it is we aren't responsible for what happens in our past. We are responsible for what happens now.

[Alan] Now but you see I feel this is a this is a hoax. You see look let's suppose now that. We will follow the theory of those astronomers who maintain that the universe is not a steady state thing but there was an enormous bang. Billions of years ago and from this bang all the galaxies were thrown out into space. Now, then you look back at this as something. Which happened in the past and which is as it were the cause of the present. But what I would say is that bang is still going on. When you take a lovely bottle of black ink and throw it as hard as you can at the white wall and smash it. Only goes like this you know and in the center it's dense but on the out fringes it has all kinds of interesting color cues and that's all you see one splash. Now in the same way we are at the moment sitting in this room and talking and thinking we are all the little curly cues out on the end of the original cosmic bang. We are it. We are not effects of it because. To think that you are separate from the Big Bang is simply a matter of definition it's a way of talking we separate events from each other in order to measure them that is to say the notion that there are distinct things and distinct events in the physical world is a calculus. It is like pretending that a curve is a series of points. And so in the same way, supposing you have a wiggle.

Now you've got a wiggly line you see and the whole world is wiggly lines clouds mountains people Rivers everything is wiggly lines now how much of a weekly line is a wiggle. You see what is one wiggle and you can see that this is a very arbitrary matter.

So we see the obvious wiggles in the world and we define them as people. Each of you is a wiggle and this wiggle is you! [audience question] That's simply a repetition of the original explosion. Right of class war and of course. This is an expression, entire earth and yes exactly this is the repetition of the original explosion. [audience] It starts before us. Because the definition of yourself as beginning only when shall we put it where did you begin when a partition at conception or when you heard the evil gleam in your father's eyes when did you begin let's go back you began on the first dawn of creation whenever that was that because you did it. See everybody is pretending they didn't. And you can kind of play a game this is what gurus do is an masters and so on they give you a funny look and you say oh I have a problem please teacher I'm this little me and I caught in this thing called life I got mixed up with all these tubes and. And it's uncomfortable and I don't know what to do about it because it's all going to fall apart. And so the teacher says where this freedom on a machine or whether it's a zen teacher who is mixed up in this thing who are you who lost this question. Show me find yourself. You say well I just does me and he says oh come on. You just don't. See it so eventually the person feels very bogged. Because the teacher is calling his bluff. And you are not the Lord God in the Jehovah sense of Christianity who is the cosmic technocrat who knows all the answers to everything but you are the law of God in the Hindu sense was different because the Hindu god doesn't know how he does everything in the sense that he doesn't translate it into words he can't explain it because there's no point in explaining it. You open and close your hand without knowing how you do it and yet you surely do it but you can't put it into words how it happens unless you're a physiologist and then even so it doesn't help you much to open and close your eyes. Better than anybody else. So you do know how to do it but you can't explain it because the thing words are very clumsy way of talking about something which from the standpoint of words in the standpoint of logic is a very very complicated process. So, if you asked Shiva how he dances the cosmos he would say I just do it like you say what I just open and close my eyes and...

So then, you go to says to you isn't Shiva Don't kid me you know that you are not Shiva. But they are just as a thing called Mary Smith or John Doe etc. And everybody says oh you can't admit that because you see if I did it that I would have to be considered responsible and I would be considered crazy and I would feel that I really was one with this whole scheme of things. And that's you see the secret that we don't let the children know. In all well not in all but in many cultures initiation into manhood consists precisely in finding that out. They finally get around to saying to you after all you know we've been pretending all this time that you would just this little boy little girl. But now we're going to let you in on the real story. But not in this culture. That's the problem. In this culture, we do have an initiation into adult life called psychoanalysis and that everybody is ruined by education and then it can't be helped, because they have to know all the conventions and just like you to preserve beef you make it salt and when you're going to cook it you have to suck the salt out of it. So in the same way, to make a child tolerable companion you have to. It's going to. Bill you have to be salted with education then when that mixes up all your natural instincts you have to be psychoanalyzed in order to be straightened out. And root cured of your education cured of your upbringing but the difficulty is you see that the assumptions of psychoanalysis. And of a good deal of psychotherapy in various types and schools do not include the insight that you are basically the works. They have in other words, that simply because historically speaking psychotherapy originated in the nineteenth century. And therefore still carries on the nineteenth century assumptions about the nature of the universe. And all those nineteenth century assumptions about the universe were a put down. They included the myth you see, that the universe is actually blind energy it is essentially stupid. And man's intelligence and man's values and man's consciousness are a fluke in the world.

And so, this myth is that the world. Man, in other words, is not a symptom of the world like an apple tree is a symptom an apple is a symptom of an apple tree that man is a fluke. Kind of a joke of chance. And that to be realistic and hardheaded. Factual In other words a strong man you must realize that you are caught in this trap and face the fact.

So then this...for the West at any rate. This nineteenth century philosophy of man's place in the world and his identity. Has become the most plausible common sense. In other words, people say they are Christians they say they are Jews they say they are the author of his to be done to put is at cetera et cetera but they are not. Because they know in their heart of hearts, whatever they choose to believe that the world. Is as described in the nineteenth century myth because that's become our common sense if people were Christians they'd be screaming in the streets and not screaming streets. Be taking full page ads they'd be sponsoring T.V. programs about the tremendous sense of this Christian that and then not doing anything they find a few Jehovah's witnesses are doing it but they are even they are fairly polite when they come to your front door they show no urgency really. So they don't believe it because the plausible myth of our age is the myth of the fully automatic model of the universe in which man is a fluke and which he doesn't really belong he has a chance operation and when you're dead you're dead and that's all that is to it. That's so plausible, that really almost everyone believes in it without realizing that it is made out of whole cloth that's and nothing but a myth the way of looking at things a way of striking an attitude. But this is the powerful, powerful idea that governs our children, and that gives us our sense of basic identity alienation so that. We live always in expectation of a future, which of course never happens. Well, that's enough from me for the moment.

Humor in Religion

A listener writing to me has made the comment that he felt it in bad taste to make a joke about God as I did in a former talk. And since the God I made the joke about was the God who inhabits a Christian church. Whose house it is, he said he felt that I wouldn't have made the same kind of joke about a Buddhist shrine. I suppose the listener assumed I was a Buddhist. I'm interested in Buddhism and I like it very much, but I'm not a Buddhist I don't give myself a label. But it's always struck me that a person who doesn't know how to make a joke about God. Or about his own religion. Is somehow strange to his own religion. I like a Buddhist story very much it's about. A kind of Buddhism. In Japan called Shin Buddhism, and the peculiarly. You might say wonderful, examples of this particular way of life are called miokonen, which means marvelous fine people.

The story goes that one of these Miokonen was traveling one night and then a place he found the lodging was a temple. And he went inside, and it was a rather bare, drafty place until he got up around the altar and there he found the various cushions on which the priests sit and he made himself a comfortable bed out of them and slept right in front of the altar. And in the morning the temple priest came in and saw this raggedy looking beggar sleeping in the holy sanctuary and he said Ma, what if from tree one river it's what sacrilege you common but I'm coming in here and sleeping in front of the altar. And the Miokonen looked up and said wow he said. You must be a stranger here, you can't be one of the family. And I remember another story this time it's a Catholic story. There was a church in Italy. And an Italian mama had taken her kids and she wanted to pray and washee was praying the kids were tearing up and down the aisles having a wonderful time and the reason New England spinster visiting and seeing the sights of the guide book in our hand, and she saw all these children making an irreverent know is and she touched the Italian mother on the shoulder while she was paid said Excuse me but contra take care of those children of yours they're making very unnecessary disturbance. It's how the woman said but it's the father's house, can't they play here.

I wonder why it is that we, especially we of the Anglo-Saxon subculture, have to be so terribly gloomy about religion and deny all of human to it. I remember when I was a boy in school. It was one of those British public schools one of the very great sins that one could commit was to smile or laugh at a church service. One had to keep on the straightest of straight faces. Even though everybody knew we made all. Sorts of terrible jokes about the Reverent clergy and the things that went on Nevertheless while we were there while we were in the presence of the public the must be no loft at all for fear of the most dire punishments. I don't think it's in bad taste to be jocular about divine matters about holy things. Indeed, one of the most vigorous spokesmen of traditional Christianity G.K. Chesterton used to say that very often when he wrote the word cosmic in an article, the printer would print comic. And he said this is after all, not so unintelligent. For there is a greater connection between cosmic and comic than the mere similarity of the words. He said on another occasion, it is one thing to be astonished at a gorgon or a griffin. A creature who doesn't exist, but it is much more profound to be astonished at a hippopotamus a creature who

does exist and looks as if he doesn't. He had the sense in other words, that the good lord had the most tremendous sense of humor. Perhaps you may know that poem that he wrote, where he's describing some sort of strange wonderful fish, where he says dark the sea was but I saw him one great head with goggle eyes like a diabolic cherub flying in those fallen skies. I have seen a fool ha fashioned borrow from the heavens a tongue so to curse them, or at leisure. But I try to not as dung for I saw that Finney goblin hidden in the abyss on drugs and I knew there can be laughter on the secret face of God. Blow the trumpets crown the sages bring the age by reason fed, he that siteth in the heavens, he shall laugh the prophet said.

Of course actually the quotation that he takes from the prophet at the end is a little bit out of context. Because if I remember it correctly, and I'm only speaking from memory, he that sitting to the heavens for a laugh that he even the scorn. And that's not real humor, as Chesterton intended, the idea of real human. Because I think real humor, or the profoundest order of human is to be able to laugh at oneself. Humor is the awareness isn't it that. You yourself in would lay. Very incongruous with what you appear to be outwardly. Another remark that Chesterton made is it that is always funny to see somebody fall down. Especially a dignified person, fall down. It's always funny to see for example a man running off his hat when it's been blown away by the wind and he says this is funny because it's reminiscent of the fall of man. That the pretentious and pompous person, going along the street you know, how these people can move as if they were a procession all by themselves a sudden it comes to grief. And the humanity and fallibility and find it to do the creature suddenly intrudes. The same sort of amusement of course occurs when a dignified person breaks room in public. And that's why we see humor in such a famous limerick. As I sat next to the Duchess at tea with everyone that offered to see how rumblings abdominal was simpler phenomenal and everyone thought it was me. The contrast the incongruity between the dignified person of the Duchess and the rumblings abdominal. And so on a much performed a level. It seems to me that it's always a mark of the highest sort of wisdom that we find among human beings for a person to be aware of what I've sometimes called his own irreducible element of rascality. And therefore, he's never able as it was and they down the law to other people without something. In the way of a little twinkle in his eye. Or great deal of humor so-called, is simply

malicious, where we make fun of other people at their expense and me point out that incongruities. And this humor lacks insight, because it doesn't see that you, yourself have the same kind of contradiction.

You notice very often the can really subtle form of humor with Jewish people. I remember in particular a rabbi I think will Stein of the Jewish Theological Seminary in New York whose...has a marvelously subtle sense of what you might call self-irony. And the whole of his charm as a man consists he doesn't overdo it but it's just the flavor of this slight humor about himself, his realization of his own finitude without being guiltily ashamed of it and I think this is the important thing after all. So much of the work of every psychotherapist is to get people to acknowledge. And admit the disowned aspects of themselves. After all, if you are brought up, not only to behave correctly outwardly, but to imagine that you can behave correctly inwardly. In other words, to imagine that you can be without a way would even though or even just wandering thoughts and ideas and emotions and that you must keep your own mind swept clean of these funny oddities. And then you struggle and struggle all your life long to disown, be afraid all of these purely a spontaneous and strange creatures that arise in yourself like goblins from the abyss on drugs. Then of course you are sick and you have to go to a psychiatry and his main task of course is to get you to acknowledge and accept and be responsible for these unwelcome and alien aspects of oneself. In other words, what the psychotherapists teach us more than anything is that that is it is plainly and downright absurd to be guilty, to feel guilty, because one is simply human. And has this kind of wayward spontaneity of one's inner life.

And thus, you might say it is the sign of an integrated psychically whole person that he has humor with respect to the side of himself. That he always is aware of that he never is what he's supposed to present himself as in public. And it seems to me that this is an absolutely necessary gift in anybody who holds the sort of responsible office where he has the life and death of other human beings in his hands. Whether he's a president of a great concern university or a corporation or whether he's a judge or whether he's a psychiatrist, a physician he has to have this understanding about himself and it's very nice to be able to get up at a public place and bombinate and lay down the law in a solemn way as to how everybody else

ought to behave. You always notice that people who do this really in the long run completely ineffectual and make asses of themselves. Whereas the more persuasive type of human being has along with whatever he may say a twinkle in his eyes, because he has the sense of his own limitations and he knows very well he's conscious of the fact, in other words, that his inward being and his outward row are complimentary. A coincidentia oppositorum, a coincidence of opposites rather than simply the same thing on both sides. That's what for example, makes a man like Rabelais so great he was quite a devout and proper sort of clergyman and his ordinary life and yet he wrote these fantastic tales about Gargantua and Pantarole. On the other hand, will find all sorts of people whose writings and lives were overweeningly holy and were actually rascals, and they never really acknowledged it, they were always torn between a certain guilt. And so are I would say that that human the recognition of it of a sudden incongruity in things is one of the very highest qualifications of a Wholy Man holy in the real sense of being whole.

And now of the question arises you see, if this quality of humor is a characteristic of the highest kind of human beings that we know, why not... couldn't it be a characteristic of God? Now please you understand, if I talk about God in this way, this isn't saying that I think that factually, scientifically, you all metaphysically there is such a thing as a personal god. This is a sort of aside to make the point clear. I do feel that there is perhaps an order of the world. That might in some ways correspond to rather than being equivalent to the notion of God. But in talking about God in a more personal way one is using what is to my mind a mythological way of speaking. And if you use it as such you can say in this mythological or poetic manner of talking things that are important. Myths can sometimes express philosophical ideas that more exact language can never get across mythological language is infinitely suggestive.

And therefore, if one talks about God and the devil. And uses these for the personal god and personal devil speaking in a mythological way it's often very suggestive philosophically and that's the kind of spirit in which I'm talking about. So the question arises, why couldn't wouldn't the idea of God be extraordinarily defective and extraordinarily unpoetic without the gift of humor, and not the kind of humor which is laughing at others but that of

laughing at himself, with a capital H. It's so strange that people who believe in God very often expect the children of God to behave much better than God himself. When you consider the kind of conduct that is expected of a saint in most religions. In most theistic religions it's infinitely superior conduct to that which is expected of God. God is allowed to judge and damn people in all directions if they displease his divine will, and the saint is always characterized as an infinitely forgiving person. The saint may have humor. But very rarely does it seem that God does. What would the humor of God be? This I think would take us to a very profound matter. That, if humor is the recognition of a sudden incongruity in things, what would be the incongruity that is cosmic, that is absolutely fundamental?

Well, first of all, it does seem doesn't it, that one of the things that is fundamental in all life is the polarity of what we call opposites. Namely, for example, that you can't have life without death. You can't have something without its being limited both in space and in time. The higher you go, the further you can fall. That the more you succeed, the more you need to succeed. The more you have, the more anxiety you have to keep what you have and so on there's a certain Isn't there a kind of contradiction. That every yes seems to imply no. And naturally, this is at the root of anxiety. When we realise that to be, to be alive means that we are going to die to be implies not to be. To become implies not to become, there's something fundamentally frustrating about that. As if life was saying to us, heads I win tails you lose or you... I've got a game you can't beat. And I say that arouses anxiety in us. Because it gives us the feeling that we have to choose between two things, neither of which is quite the choice that we want to make. If we choose life we get death. And so on.

Now, a quite a long time ago in one of these talks, I used an illustration of anxiety which I got from Gregory Bateson. And that was the electric bell. An electric bell is a mechanical anxiety because it vibrates, it wobbles, it trembles. You know how it works. It's an electromagnetic, and alongside the electromagnet lies a strip of metal on a spring with a ball on the end, and that's called an armature. And when the current is switched on, the magnet attracts the armature. But the armature moves and is also a switch, and it disconnects the current. So immediately the armature pulls it. The magnet releases it, and it springs back, but that switches the current on

again, and so the armature springs back and forth and rings the bell. So in other words, this mechanical anxiety is that every yes means no. To switch on implies to switch off, to switch off to switch on. This is like life implying death and good implying evil, and so on. And so it trembles, and this is the motion of anxiety. A kind of oscillating trembling is also the motion of sobbing, of weeping. But the wobbling, the trembling, remains, shall we say negative, something like anxiety, something like weeping, just so long as we are trying to beat the game. So long, for example, as we are trying to have life without death, to have pleasure without pain, and to have virtue without the element of irreducible rascality. When, however, this is seen through, when we see that this coincidence of opposites is the very nature of life, the nature of the vibration changes, and instead of anxiety it becomes laughter. And laughter is a release. Perhaps you know a remark that one of the zen masters made that when a person has struggles through the whole discipline of Buddhism and finally sees the point, he says nothing is left for you at this moment but to have a good laugh. Because you see again, the incongruity. You were striving, struggling, for something we had all along. I mean, don't we laugh at ourselves when we're looking everywhere for our spectacles and discover that we're wearing them? Or, digging through all the drawers and closets for one's necktie when it's already on. It's the incongruity of the state of affairs as they are, from the state of affairs as we imagine them to be.

So, one might say, there is this incongruity, this rocking ambivalence, at the very root of the world, and thus, to introduce this perception into religion doesn't seem to me to be in any way irreverence. It might be irreverence if it were done maliciously. If it were done to laugh at it. But this kind of humor seems to be laughing with it. I mean the story I told about the prayers of the sort of beatnik character were answers instantly, whereas those of the devout believer were not, and when the devout believer protested, God said, 'Man, you bug me.' I mean just suppose you were God. And you had to listen day in and day out, to the way people spoke to you imagining that you are that kind of fellow that they do imagine you are. Imagining that you could only be approached with fear and trembling. And with the most. Strange gestures of piety and standoffishness. I would beg to suggest that even on negligence and on this you would find it exceedingly tiresome I would want to introduce a sudden light touch into the

proceedings. It's so strange that a great deal of the religious attitudes of east and west alike are based on caught ceremonials of ancient kings. You know, everybody had to lie prostrate on the floor, mustn't look in the eyes of majesty and how to speak especially polite language and make all sorts of bows and curtsies as I'm retired from the room backwards. Why did they have to do that? Why did they arrange it that way? The answer is simply that those ancient tyrants would turn out to fight a rebellion and did everything possible to keep people. In on a hundred B.C. and. it was because they were weak not strong that they had to have this sanctimonious kind of flattery. So if God for those who believe in God is really God If God is strong and not weak. That kind of mummery is hardly necessary.

Ghosts

There's an old Cornish litany that runs from girl isn't ghost isn't long legged beast is and things that go bump in the night. Good Lord deliver us. And I like to connect it. With another saying. Which I heard once from a professor of mathematics, Professor Davis at Northwestern. When he said, 'It's amazing how many things there are that aren't so.' I've been looking again recently at a book, which is one of the most important contributions to modern philosophy. Wittgenstein's Tractato Logico Philosophicalus. And despite its complicated sounding title and the intricacies of some of the reasoning in it. It's basically an extraordinarily simple and extremely cogent piece of reasoning. To think about it that fascinated me so much. And some others is the astonishing similarity of Wittgenstein's point of view to that of Buddhism in general. And Zen in particular. And this was also noticed by Paul when Paul who's a Professor of Philosophy at the University of California at Santa Barbara, who once wrote an article on the subject. But let me quote a passage from the end of the book.

The solution of the problem of life is seen in the vanishing of this problem is not this the reason why men to whom after long doubting the sense of law. I became clear I could not then say where in the sense consisted. There is indeed the inexpressible this shows itself it is the mystical. The right method of philosophy would be this. To say nothing except what can be said. I.E. the propositions of natural science I.E. something that has nothing to do with philosophy. And then always, when someone else wished to say

something metaphysical, to demonstrate to him that he had given no meaning to certain signs in his propositions. This method would be unsatisfying to the other. He would not have the feeling that we were teaching him philosophy. But it would be the only strictly correct method. My propositions are elucidatory in this way. He who understands me finally recognizes them as senseless when he has climbed out through them on them over them. He must so to speak, throw away the ladder after he has climbed up on it. He must cement these propositions then he sees the world rightly. Where off one cannot speak there are one must be silent. I suppose that last sentence is one of the most often quoted passages in the whole literature of modern philosophy rather reminiscent of Lao Tzu, saying Those who speak do not know. Those who know do not speak. But as one looks over certain illustrations and images in the passage the student of oriental philosophy finds them extraordinarily familiar. The idea of throwing away the ladder after you have climbed up on that directed power levels the ancient Buddhist simile of the Buddha's doctrine being a rock. To cross a river. To cross from the shore of Samsara to the shore of Nirvana from life lived in other words as a vicious circle to the life of liberation. It goes on to say after you've crossed the river you don't pick up the raft and carry it with you you leave it behind.

And so in the same way, Zen teachers have often made the remark. That all the doctrines that the Buddha taught were nothing in a way that obstacles. The doctrine is sometimes likened to giving a child a yellow leaf to stop it crying for go. And so in the same way, Wittgenstein suggests that the whole task of philosophy is really to get rid of itself I mean in rather the same way the task of a doctor is to put himself out of business because he never succeeded because people keep getting sick. But if he was one hundred percent successful he'd lose all his patients because they wouldn't be ill in him all. And so in the same way, a philosopher of this kind is very rarely out of business. Because there are still always people with what we might call intellectual sicknesses bothered by fantastic and nonexistent problems. And so too we can see another parallel, where he says it's the right method of philosophy would be this: to say nothing except what can be said I.E. the propositions of natural science I.E. something that has nothing to do with philosophy it's just the same thing when the old master, when asked what was what is the fundamental principle of Buddhism and one of them

answered three pounds of flax. What is that got to do with philosophy what is that got to do with things of the spirit but you see what it is it's a perfectly ordinary everyday remark.

[There was] another was another story rather like this. There was an old master called Gozo. And one of his students came to him one day and said how am I getting on in my study of Zen Oh he said you're all right but you have a trivial fault but what's that you work together too much then well said the student if one is studying Zen isn't it the most natural thing in the world to be talking about it. And the Master replied, But when it's like an ordinary everyday conversation, it's somewhat better. Now this may appear at first sight to be a kind of philistinism. In other words, the most spiritual discourse that one can have is Good-morning how do you do. Nice day, isn't it? Does that not reduce all the great speculations of the human intellect the great quests of human intelligence to mere prosaic everyday matters. Well it depends. You know extrusion was often have a deceptive resemblance between each other. Very often parallels have been drawn between the wisest of men and idiots. Or between great sages and children. Or between saints and drunkards. For in rather the same way, the highest in the lowest notes of the musical scale are alike inaudible. And yet extremely different so in a somewhat similar way the person who's been through the whole thing the whole quest of wisdom the whole study of philosopher. Ends up deceptively like a stupid man who never heard a philosophy in his life you know the Zen saying: When I knew nothing of Buddhism, mountains were mountains and waters were waters. The when I had started it a great deal mountains were no longer mountains waters were no longer waters but when I had fairly understood the whole thing and arrived at the abode of peace mountains were once again mountains and waters once again waters. Something rather similar happens here because you see what Wittgenstein is really saying, Is that there is no problem of life. In the sense in which we ordinarily use that phrase. And that seems an almost a stunning affront to our confidence life not after problem we see it is nothing but problems we regard ourselves in a morning noon and night struggle to solve the great problem of existence and for some people this problem is. Why does the universe exist? Rather people the problem is how my going to get enough to eat. And therefore, when you take it at one extreme or the other why does the universe exist or harm I going to get enough to eat who

can say that life is not a problem and yet here is this audacious suggestion, that what we are bothering about is a ghost. It's something that isn't really there.

But you know, when we look at the history of science. We find to what an extraordinary sense. Science has solved problems by disarming them. I mean such things for example people have spent years and years and years hours and hours of thought trying to invent a mechanical contraption that would be in perpetual motion. Think of the trouble they would save themselves if they realized it can't be done. Or they've tried to find a construction for try setting an angle with a straightedge and compass and it can't be done and now it's been proved that it can't be done and how much trouble would have been saved. Or think again of trying to square the circle. Or, imagine for example, people thinking for centuries that the planets revolved about the earth because they were encased in crystalline spheres. The funny thing is they knew they were encased in crystalline spheres why you could see right through them. And yet that the whole problem of how the spheres were moved out of as a premium of the layout most fear that gave rotation to all the others is simply disappeared the spheres are presumed now not to be there at all and it's much easier to think of the solar system without the spheres. In the same way, people jolly well knew that the planets revolved about the earth and in circles. Perfect circles and it was a considerable shock when Kepler proved that the orbit of Mars was an ellipse.

So too, we knew we were perfectly sure of essential that light propagated itself through a mysterious continuum called the ether. And to our astonishment we found out that there isn't any ether. In so many ways, just ordinary physical science is using is an act of understanding the world more clearly by ceasing to ask misleading questions. In exactly the same sort of thing happens to in psychotherapy. One of the characteristics of neurotic behavior. You know is it's repetitive. The neurotic personality keeps going through unsuccessful life patterns again and again and again and nothing seems to be able to stop it. Now this kind of behavior is exactly what a Buddhist would mean by Samsara. The round of the rat race, of birth and death that is to say of life as we ordinarily live it. Because it is a round, it is a vicious circle. For the reason that we keep trying to solve problems that

are not simply overwhelmingly difficult. The problems that are not problems at all. They only look like problems. So when we tackle you see, impossible questions. I mean for a simple example, if you really think it means something to ask why is a mouse when it spins and then try and find out it will never make any sense to the cows come home. In the same way, Buddhist imagery liken this to looking for the horns of a hare. All the child of a barren woman. Or the beard of a unit. And thus, things go round and round and never come out, when, the question being asked is the is an absurd question is a nonsense question. And therefore what brings cure healing say to a neurotic personality is the insight that the problem that he was trying to solve was no real problem at all.

Now, take for example. Some of the many ghosts which haunt our minds. We say for example that we all have an instinct to survive. And a lot of people thus treat the problem of life is how am I to survive? And one might almost be a little cautious about relieving people of this problem lest they should lose the impetus to go on doing their work. But then also, impetus to go on doing your work is another ghost we think we have driven you see we think that what we do has these mysterious things behind it like for example people say. We always choose, make our decisions, on the basis of a pleasure principle. We always choose in accordance with what we prefer. And of course when our choice is limited to alternatives all of which are rather unpleasant, we choose the lesser evil. Now what is actually say we always choose what we prefer is simply another way of saying we always choose what we choose. For there is no way of showing what it is that we prefer except in the fact that we choose it. So it's very important simply to keep your eye on what is being done and to describe that and if you describe it clearly enough and well enough you will probably find the ghost of instinct disappeared. Thus you see, when we talk about an instinct for survival, what is the saying? What is the evidence for the fact that there is an instinct for survival? There is no evidence except that in fact be. It will survive. Until they don't. And this is rather odd because what happens to the instinct for survival when people don't survive well Freud thought he solved this problem by inventing a death wish a death instinct but that too is something as phony as the survival instinct and the whole problem is much more simply described if we get rid of both of these ghosts.

So, in this way, we find that when we try to explain some kind of behavior some kind of activity, by supposing, that there is a motivating force a sort of Incarnate spook behind the whole thing what has really happened is that we haven't described what's going on sufficiently clearly. Now this comes out in another way, when we try to describe anything at all, and think that we are describing something that as it were exists all by itself like the Cheshire Cat in Alice in Wonderland, whose face just hung all by itself in mid-air. I mean supposing we have we draw the Cheshire Cat and here he is with his big grin. And we try to describe what goes on here what is this figure. Well, we get at first sidetracked we are fascinated by the figure our attention is riveted on it and we think that that is what we are talking about all by itself just up. That. And we start to talk about it's outline that it's black. And that the cat has little we can if on the top of its head that it has whiskers and a big grin and so on and so forth. But I ask you let's account for the fact that it's there and it isn't hanging in the middle of empty space how does it happen that this black outline is there where is it? And then we have to say, well, it is on a piece of paper. And the piece of paper is so Tash to the framework that it stays upright and could be drawn on in the sufficiently firm and furthermore it is of such a texture that the ink doesn't just roll off when you put it that. And, but you see what's beginning to happen, is that I'm beginning to describe not simply the figure, but the ground of the figure the environment of the figure. I should also go on to say that the figure got there. Through the application of a brush with ink on it and how did the brush get that well you might say I put it that way. Yes but let's describe that more carefully. What do you mean, I put it? What does this 'I' word refer to? Well I is a human organism. And it does things. With him and Wedeman what is this it does things. Describe that more carefully and what are you going to describe. You're going to describe the organism and you. With all its complex structures. But as you describe the structures as you describe that organism accurately you are going to describe another action. You would describe the whole thing in terms of process you won't find as it were some thing doing the process as I've often said we are so bugged by the notion of stuff you see stuff acting stuff doing things but all that is you see is that. The world strikes us as being material until we examine it closely. In other words and distant nebula in the heavens looks like a solid star, until you turn a giant telescope on it and you make out the clear pattern of a spiral nebula. Or, to the naked eye, a lump of wood looks like a solid

and impenetrable mass of continuous matter. But when you start turning powerful microscopes on it and the instruments of nuclear physics, you begin to find out that this apparently solid lump of wood. Is a worrying mass of electrical charges going on in relatively enormous spaces. In other words, the concept of stuff is a sensation that we get when we haven't examined things sufficiently closely, or when our instruments are not fine enough to penetrate what we're observing. When the instruments are fine enough. What we get instead is pattern, and pattern is simply a form of behavior of activity. Consider this in another way. Let's go back to the Hume. An organism. And asked the question well what about it shape how is it that a human organism is contained all the organs are kept in by the skin. Well we will describe of course the structure of skin and how it is that it holds together but then we'll soon find out that we're also talking about the surrounding area which impinges upon the human skin with a pressure of about fifteen pounds per square inch so that if it weren't that would explode. Now so the question arises you know what is keeping the organism in shape and we find out that it is not only what is going on inside the skin that keeps it in shape but also what's going on outside the skin. And. When we go on to describe this still mark half we discover. That it isn't quite correct to say that it is the air that is doing this or that it is the organism that is doing this. We begin to describe instead what Dewey and Bentley, in the very fascinating book *Knowing and the Known* call a transaction. And that is to say. A by our. Count by unless somebody is also selling. You can't. Know anything. Unless the something we know. You can't eat unless there's something to be eaten. And this fact. You see is constantly overlooked. That any thing in the world whether it's in animate or animate whatever it may be, is that by virtue of being in a transactional relationship. Not with something else but everything else. In other words, a human being, of course, has ever so many relationships that are very complicated. And because, a person say we call a doctor is not only related to his actual work of doctoring but he may be also a father related to a family he's a citizen related to a community in other ways and as the doctor and so on and so forth and so we begin to imagine him as it were apart from his relationships as a sort of constant going through all these different relationships and therefore in some way different from them all. But this you see creates a ghost. It creates a being independent of all the different relationships in which he finds himself when as strictly speaking, he is

inseparable from those relationships and we can't eliminate them we can only describe fully as the entire whole complex so that in other words. Every organism could be called the behavior of the field or environment in which it is found. Now this doesn't mean, on the one hand, that the organism is something pushed around by the environment. And is completely passive and inert and that everything that it does is simply a response to external stimulus.

Because in a way, the organism is part of its environment after all it is an object a process in nature in the cosmos just as much as everything in its environment. There is really no way of separating the two and saying that one acts upon the other that the organism as it were shoves around the environment or that the environment shoves around the organism instead of speaking as it were in this terminology of doers and done to. Our attackers and victims. We simplify things considerably. Just by confining ourselves to a description of what is happening. And as we do this we get a peculiarly clarified picture of the world, without all sorts of ghosts and it is in this way that we also begin to be able to have some preliminary intuition or sensation of the meaning of the fact that life is not a problem. In other words, not a contest between ourselves and our environment. This conception of life turns out to be basically phony.

Gateless Gate

When I originally planned [this] series of talks, I had not intended to include what to me is one of the most remarkable books in the world. And the reason I hadn't originally intended to include it in the series, is that, to the average person who is not acquainted with these matters it's a book of extraordinary difficulty, despite the fact that from another point of view, it's a very simple book. But in any rate, I thought I'd have a shot at it. This book is called in its Chinese title Wu Min Guan. And literally translated that means no-gate barrier. Or you might call it the gateless gate, or the gate which is no gate. The book is representative of an extremely important school of Buddhism known as a Zen in Japanese and as Chan in Chinese. And this particular school of Buddhism has been one of the most potent influences. In the history of Far Eastern culture, in the shaping of its arts and such a wide range of Arts, going from painting and calligraphy at one

extreme to the art of Jujutsu at the other. Including in between, landscape architecture ordinary house architecture ceramics archery, fencing, all kinds of things as well as daily life itself. And because of them has been of such great influence in forming the cultures of the Far East is one of the most important types of oriental philosophy for us to understand.

But when one comes to the literature of Zen, the beginner is faced with a very strange problem. And the problem is that the great majority of this literature consists of anecdotes store is which are technically called Mondo or question and answer. And these story is are somewhat like jokes. Because a joke strikes you as funny only if you get the punchline see the point and laugh at once. If somebody has to draw a diagram and explain the joke to you and tell you just why it's funny, well, it falls flat. And it's the same with these stories. There is a meaning to them, but this meaning is not a symbolic meaning as I will try and explain in a little while you don't really have to be in the know about a kind of subtle and obscure system of symbols in order to be able to interpret them. The strange thing about these stories is that the point which they convey is so obvious, that it's difficult to see. And the problem about explaining a book of this kind is that the more I might succeed in giving you what would seem to you like a convincing and satisfactory explanation, the more I should be fooling you why would that be well for exactly the same reason. As if I were explaining jokes. If I explain a joke and draw a diagram of it I cheat you out of the laugh. You will never have a belly laugh over it, you will at most have a rather polite throaty laugh but if I do not explain the point of a joke to you, even if you do not see the point immediately it is told some time later while you're ruminating over it the point may suddenly occurred to you and then you may get the benefit of laughter. However the point of these then stories is not so much to make you laugh. But to create a state of mind which in some respects is rather similar to laughter in that it is a state of profound feeling it's not just a state of understanding words. And that profound feeling is called in the technical language of zen Buddhism, Satori. And Satori is more literally, a sudden awakening. I think when I was talking about the Diamond Sutra. I tried to give some explanation of what is meant in Buddhism by awakening. I'm not going to try and give a further definition of what it means, except by agency of the stories themselves and some comments about them. But awakening, is the goal of all Buddhist endeavor.

It is a kind of psychotherapy a kind of transformation of the consciousness of the everyday person which is held to be a sleep, into a state of awakening, in which you might say he is so clearly conscious of reality. That he is never fooled anymore by the illusions of life.

Before I turn to the actual story is contained in our book *The no-gate barrier*, I think I should say something by way of introduction about Zen itself because then it is really an extraordinary phenomena in the history of philosophy and religion. The reason why Zen is so peculiar is that it has to begin with no doctrines that can be stated in words nothing that it requires anybody to believe. It has no system of formulated philosophy. In fact, it doesn't really have anything to say at all. What is remarkable about zen is that it endeavors to convey its message. The realisation which constitutes awakening in Buddhism, without the intermediary of words and ideas. There are four statements which sum up the character of Zen Buddhism and they are as follows. A direct transmission of awakening outside the Scriptures. No dependence on words and letters. Direct pointing. And finally, seeing into one's own nature and becoming a Buddha, which is to say, an awakened one. I particularly want to concentrate on what is meant for the moment by direct pointing, because this is the technique in which Zen excels. Zen feels that all that human beings are seeking all that they really fundamentally desire. Whether it be complete contentment of the heart, understanding why this universe exists and what our place in it is all this understanding is not something obscure and far off, but something completely obvious. And lying open for us to anybody who cares to look at it in this immediate moment which we are living now it does as if to say. The whole secret of life everything that you could possibly desire is yours at this moment. And if you cannot lay hold on it now you will never be able to. The difficulty is that it's very hard to convince people of this by talking about it because all talk, all systems of ideas, are in relation to reality itself somewhat like a menu in relation to a dinner. And those who try to get comfort to get wisdom out of books or by believing in various systems of ideas and philosophies. Such people are really devouring the menu instead of eating the dinner.

Now how then is one to divert people's attention from the main you to the dinner itself. There's only one way and that is to point directly at the dinner

to stop talking about it to stop writing about it and to point out it directly. And this is what zen does and most of these stories from the no gate barrier Wu Min Guan, the examples of direct pointing. According to legend the Zen school of Buddhism was introduced into China in about the five hundred twenty seven A.D.. By a sage. From India whose name was Bodhi Dharma. And Bodhidharma is always represented in the art of the Far East as a fierce gentleman with a bushy beard and staring bright eyes. In Japan, at the present time children's toys are made to represent body Dharma their little fellows rather like the American schmoo. Same sort of shape, and their weighted inside you know they're legless figures and they're weighted inside so that you can't knock them over they're always come up right again. And always, there is the fierce stare in the eyes of the bushy beard on the chin and of course there is some reference to body dharmas secret to the teaching which he brought, to the message of Zen in the fact that you can't not was little fella over you can push it in this way you could push him that, but he always bobs up again. The first story I'm going to read from the Wu Min Guan, which incidentally was compiled by a teacher of the Zen school who lived in China between eleven hundred eighty three and twelve sixty. The first story I'm going to read you is the story of the encounter between Bodhi Dharma and his first disciple. Whose name was Aka. Bodhidharma was sitting facing the wall. His future successor a car stands in the snow. And presents his severed arm to Bodhidharma I should explain in parenthesis that. Bodhidharma had very much discouraged from becoming his disciple and this is always the way with Oriental philosophical and spiritual teachers they don't look for disciples. And the reason why. Bodhi Dharma wasn't looking for disciples was his own fundamental feeling that he had nothing to teach the truth of Buddhism was so completely obvious that anyone could see it if he looked and to talk about it and try and teach it was as they say in Zen, only to put legs on a snake. You know, a snake walks very well without legs and if you stuck some on it would only embarrass him. And so he had said repeatedly I have nothing to teach go away. But a guy was so convinced that Bodhidharma had some secret which he could convey to him that at last as a token of sincerity he cut off one of his arms while standing outside the teacher's heart in the freezing snow and presented it to the teacher crying. My mind is not pacified. Master, pacify my mind. Bodhi Dharma says, If you bring me that mind, I will pacify it for you. I said. When I search for my mind, I cannot hold it. Bodhi Dharma

said then your mind is pacified already. And it is said that at this moment a car had a sudden insight into the whole mystery of life, the problem of peace of mind and the essential meaning of Buddhism itself. To each one of these stories, the editor of the book has added a comment and a poem, and I'm going to read the comment which he's put here. 'That broken toothed Hindu Bodhidharma came thousands of miles over the sea from India to China as if he had something wonderful. He is like raising waves without wind. After he remained years in China he had only one disciple and that one lot. Does Armin was deformed alas ever since he has had brainless disciples.' And the poem. Why did Bodhi Dharma come to China. For years monks have discussed this. All the troubles that have followed since came from that teacher and disciple. It's a characteristic convention of zen literature that the masters of the school poke fun at one another. Because insofar as they seem to be masters they all realize that calling themselves masters is kind of a joke because a mass there is after all one who has something to teach and in Zen, there is nothing to teach. The more one teaches them all one tries to explain it the more obscure it becomes just like the more one explains the joke or less funny it becomes. Going back to the story about bodhiDharma and Aka, Aka is expressing a very ordinary, simple human problem. He says, I have no peace of mind what does he mean by mind. We might say so we might say ego or self. I feel that I am happy I need peace.

And so BodhiDharma says very naturally, bring up this soul, this mind of yours and I'll pass if I had. But Aka says you know when I try to find myself. I can't. I look and look. But then I realize that I'm looking for the one who is looking and I can never lay hold on it. But body Dharma said there your mind is pacified already. I feel very diffident, really, about making any comment was story of that kind, but just in the nature of a little bit of a hint. We are all very convinced indeed that we exist as a kind of self or ego. And our selfishness is one of our major problems. It would, wouldn't it, be rather fascinating, to find that when we look for ourselves we are not really there. As if where we expected to find ourselves in the center of all our experience we found only a hole, an empty space. And then the problem of myself, my happiness my peace of mind. Would have disappeared. There is no one whom one has to pacify whom one has to make happy. You're not actually there. But of course one can't discover that

just by hearing about it you have to look and see that's why one of the fundamental questions in oriental philosophy is the simple question Who are you? Look and try to find out who it is that is trying to find out who it is that is trying to find out. This is after all. A parable of what everybody is doing who is engaged in what we in the west call self-seeking. And this is really a stupid as somebody sitting down in a chair and bashing him gnashing away trying to bite his own teeth. Well then here's another story from the no gate area. There was once a teacher called Tozan. And one day when he was weighing some flax, a student came to him and said, What is Buddha? This question can mean, What is reality? Or what is it to be awakened? Tozan answered, This flax weighs three pounds. Period. Then I read your comment. Old tows arms then there's like a clam. The minute the shell opens you see the hole inside. However I want to ask youm Do you see the real Tozan? And then the poem. Three pounds of flax in front of your nose close enough and the mind is still closer. Whoever talks about affirmation and negation lives in the right and wrong region.

Now you must not suppose that there is some symbolism in saying this flax weighs three pounds. Or why I know some commentators have tried to explain that in Buddhism there are three precious jewels the Buddha himself the dharma or his doctrine and the Sangha, or his ordained followers. But the three pounds of flax don't refer to the three jewels turns on answered. This flax weighs three pounds, just as you might answer a very simple question about where are you going to say when I'm going in town to buy groceries. Or, what kind of a day was it yesterday? Where you live only to say it was raining a good deal of the time. And this flax weighs three pounds there's an answer just like that but it seems doesn't that a strange answer to give to a question like What is reality or what is it to be fully awakened? Well, Zen teachers say that they derived this tradition of answering questions in that direct simple way from the Buddha himself, because our book contains a story. That this was the way in which the border passed on. The secret of his own teaching to his principal disciple whose name was Mahaghashaba.

And this is the story: When the Buddha was in the greed Rockwood the mountain he turned a flower in his fingers and held it before his lessons. Everyone was silent. Only Mahaghashaba smiled that this revelation

although he tried to control the lines of his face. The Buddha said. I have the eye of the true teaching. The heart of Nirvana, of awakening, the true aspect of the formless. The ineffable stride of the doctrine. It is not expressed by words, but especially transmitted beyond teaching. This teaching I now give to my how to shop. And then, the very amusing commentary of Wuman, Golden-faced Buddha, thought he could cheat anyone. He made the good listeners as bad and so dog meat under the sign of mutton. And he himself thought it was wonderful whatever the audience had laughed together. How could he have transmitted the teaching? And again if market because shot my shop I had not smiled How could he have transmitted the teaching. If he says that realisation can be transmitted he is like a city slicker that cheats the country dub. And if he says it cannot be transmitted Why does he approve of Mahaghashaba.

And then the poem: At the turning of a flower his disguise was exposed no one in heaven and can surpass my hookah shoppers wrinkled face. There were all those disciples gathered around the Buddha expecting from him the usual daily words of wisdom and instead of that he said nothing. He just picked up a flower and held it in his hand. And this is the same sort of answer. That tones on gave when he was asked what is reality he just said. This lacks weighs three pounds. An ordinary statement just as holding up a flower is an ordinary action. When Zen teaches began to answer questions about reality in this way, they had their imitators. Those who thought that they had got hold of something, that [it] was you know a sort of new cultish fad in the way of religion and they went around imitating these kind of antics in order to seem wise and to collect followers but this is what happened to a person and try that sort of thing is this. Dorie called Gutei. Gutei raised his finger whenever he was asked a question about zen. A boy attendant began to imitate him in this way. When anyone asked the boy what his master had preached about, the boy would raise his finger. Gutei heard about the boy's Mr. He seized him. And asked him the question. What is the fundamental principle of Buddhism the boy raised his finger and at once Gutei cut it off. The boy cried out, and ran away. But Gutei called out and stopped him. When the boy turned his head to good a. Gutei raised up his own finger. In that instant, the boy was enlightened. When Gutei was about to pass from as well he gathered his monks around him. I

attained my fingers and he said from my teacher ten real and in my whole life I could not exhaust it. And he passed away.

So the secret of the thing is not just in being able to do some strange antics in answer to questions, and the fellow who didn't really understand but imitated his understanding got into very serious trouble. But despite of his get into trouble, he realized the thing in the end. Here is a story in which perhaps the point of this great a thing begins to come a little clearer. And it's called The Story of tipping over the pitcher. Heakoto send him out to open a new ministry. He told his pupils that whoever answered a question most ably would be appointed. Placing a water pitcher on the ground he asked. Who can say what this is without calling its name? The chief monk said no one can call it a wooden shoe. But Isan, the cooking monk tipped over the pitcher with his foot and went out. Jaco just smiled and said the chief monk loses. And Isan became the master of the new ministry. Woman comments. Eason was brave enough but he could not escape Iago Joe's trick. After all, he gave up a light job and took a heavy one why can't you see he took off his comfortable hat and placed himself in iron stocks. If I talk all the time, and never listen to what others have to say I shall lose touch with my fellow man. In the same way, if I think all the time which is in a way talking to myself inwardly I shall lose touch with the reality with which words are about, which they're intended to symbolize. It's the fundamental inside of zen that by an excess of thinking men have lost touch with the real world in which they live. The solution to this problem is to be silent in one's mind and to look again at the real world not thinking but seeing it directly this can't be talked about. If I want you to listen to music any advice to do so will drown out the music the directness way is to play music itself. In other words, he had seen that the reality of the picture was not the word or the idea 'picture', but was something non-verbal. And by this action demonstrated that this was his understanding you cannot put what it is into words. And this indeed is a central point of zen and of Buddhist understanding in general. That reality is beyond words. And that one must not confuse the world of things as we think about them and talk about them and name them, with the world as it actually is.

The first story I read was a case in point. Because in the world of ideas and words and conceptions and inherited social notions every one of us is

perfectly convinced that he is a self, an ego. But when we step out of that world of conventional ideas into the clear daylight of reality and with wide open eyes look for ourselves, what do we find?

On GK Chesterton

I want you to have in mind an enormously fat man wearing a black cloak and a rather large, wide-brimmed hat, with pince-nez secured to his nose, and prevented from destruction by a large, black, long ribbon fastened around his neck, who speaks—as fat men do—with a certain luxurious voice rather like Charles Laughton, only with a slightly grieved tone in everything he says. What I would call a humorously grieved tone. And this is G. K. Chesterton: a person whom—I discover—has had an enormous influence on my life. Because when I was a late adolescent—and when I was, for a while, a priest in the episcopal church—I read this man’s works very carefully and I have, by osmosis, imbibed an enormous amount of wisdom from him. The funny thing is: not so much in terms of specific ideas as in basic attitude to life. Because this is a man who, above all virtues, had—I think—what is one of the very greatest virtues, which we don’t usually find catalogued in lists of virtues: he had a sense of wonder.

He knew a truth that was once enunciated by a kind of guru-type who was a friend of mine many years ago, who said that Gnosis—which means... I suppose you’d best call it ‘transcendental knowledge’—Gnosis is to be surprised at everything. Because, you see, if you carry out technology to its final fulfillment, you have technological means of supplying you with every need or wish that you could imagine. So that you have—instead of just the plain little telephone with its dial on it—you have a somewhat more elaborate machine on which you can dial for anything you need at any time and it’ll be supplied instantly. Imagine yourself in that omnipotent position!

And what you will wish for in that final, ultimate push-button world will be a button labeled Surprise! You won’t know what’s going to come when you dial that one. And Chesterton’s fundamental attitude as a poet, as a theologian, was that even God needs a surprise and, of course, for that very reason endowed angels and men with the mystery of free will: so that they would do things that would be surprising and that could not be foretold.

This is why Calvinists are so dreary: that they believe that everything is predestined. And that's why, of course, the Episcopal church is always more interesting than the Presbyterian church, in that they're not Calvinists. There's something always rather depressing about Calvinists, although there are many interesting things about them that I won't go into.

But Chesterton's idea was that the universe is so arranged that it is, basically, the Lord's own way of surprising himself. Because that's what you would do if you were God, if you really think it through. A lot of people never think this through. They think about... I remember a story about a conversation at a dinner party where all—it was in England—and all the people were discussing what they thought was going to happen after death. Whether they would simply be extinguished, or whether they'd be reincarnated, or whatever kind of thing. And present at the dinner there was a very respectable country squire who was on the vestry of the local church. Very pious. And finally the hostess said to him, Sir Roger, you haven't said anything in the conversation this evening! What do you think is going to happen to you when you die? He said, I'm perfectly sure that I shall go to heaven and enjoy everlasting bliss, but I wish you wouldn't raise such a depressing subject.

So, you see, people just don't think it through. It's very fascinating to ask people, deeply, about their theological ideas: what they really do think God is, and what heaven would be like. And not only what it would be like as based on the symbolism of the Bible, but what sort of a heaven they would really want to go to. I mean, do you want to be stuck with the rest of your family forever? The saying: God gives us our relations, but let us thank him we can choose our friends. At what age would you like your resurrected body to be? There are all sorts of fascinating questions of this kind which bring out the great, marvelous problem of what we would really like to happen. And when we follow that through, and through, and through, and through, we must admit in the end that we don't want a situation in which everything is completely controlled. In other words, if everything is rationalized, if everything is perfectly logical and clear, and it all works, and there's no possibility of anybody making a mistake, and we know exactly what's going to happen forever and ever and ever, we'd be bored to death. Nobody wants that kind of heaven. So what kind of heaven would you like?

Supposing, for example, you had the privilege—the power—to dream any dream you wanted every night and have it real vivid. And, of course, you would be able to dream any amount of clock-time in one night that you desired. You would be able to, say, have a hundred years of experience in one night. And when you think that through, what dreams would you dream? It's almost like the question: if you were going to have half an hour's interview with God, and you had the privilege of asking one question, what question would you ask? And you've got a little while to think that one over, see, before you go in for the interview. So, then, the same thing is: what would you dream?

You would dream, of course—at first, I suppose—all possible fulfillments of wishes. Whatever your wishes were, whatever your desires were, you would fulfill them all. And when you've done that for about a month of nights—of a hundred years long, each night of dreams—you would say, Well, let's vary things a bit. Let's let things get out of control. Let's have an adventure. And then, you know, you would rescue a princess from a dragon or something of that kind. And then you would arrange it so that you would forget that you were dreaming, and so the thing would seem as real as real could be. And you would dare yourself like kids dare themselves to do all sorts of dangerous exploits. And finally, you would dare yourself to experience awful situations because you knew it would be wonderful when you woke up; because the contrast would be so fascinating. And finally, in the course of your dreaming, you would dream a dream in which you were sitting in Campbell Hall at Christ's Church in Sausalito listening to me give a lecture—with all your personal lives, and your problems, and whatever it is that's going on, you see? Because that would be the nature of surprise.

Now, in this—when you fully realize that to be surprised at everything is high wisdom you get a new point of view towards the world which gives you almost what could be called a child's vision of life. When Jesus said that unless you be converted and become as a child you cannot enter into the kingdom of heaven. This is the thing that Chesterton understood in a very profound way because, to a child, the world is entirely new and, therefore, all of it is extraordinary. And I hope most of you can remember how you saw things when you were about two years old: as the whole world being quite weird. And when you get used to things... you see a tree

and you say, Oh, well, that's a tree. We're used to trees, we know what trees are. BUt if you can go back to your childhood and remember how it was when you first looked at a tree and you saw the Earth itself reaching up into the sky, extending itself in many branches and waving all these little flags at heaven. Or when you looked at the sun, as a child, and you stared at the sun: it was marvelous. And the sun turned blue, and there was a feeling about everything of being essentially magical.

So there is a most extraordinary passage which occurs in one of the rarer books of Chesterton, called *The Coloured Lands*, where he makes this extraordinary remark:

It is one thing to describe an interview with a gorgon or a griffin, a creature who does not exist. It is another thing to discover that the rhinoceros does exist, and then take pleasure in the fact that he looks as if he doesn't.

And this is the key to this man's wisdom: that he could see all kinds of everyday things and events as if they were completely improbable and magical, and that he could describe the world as an extremely improbable object. This great globe of rock floating in space around a vast fire, covered with green hair that ordinary people call grass, and containing all the extraordinarily odd objects on it. And when he thought about this he realized two things that are not ordinarily realized by religious people. And the two things are this.

He realized that the world created by God is a form of nonsense and that one of the most important features of the divine mind is humor. In one of his essays he says, So often, when I've written the word 'cosmic,' the printer makes a misprint and prints it 'comic.' But he said there's a certain unconscious wisdom in that. The cosmic is the comic. Dante wrote the *Divine Comedy*, an account of Earth, heaven, purgatory, and hell. The *divine comedy*. And one finds, you see, in ordinary people's religious attitudes there is a lack of both these things; of nonsense and of humor.

When I was a boy I was brought up in the church of England. I went to school at The King's School, Canterbury. And, of course, we attended innumerable services in that great cathedral. And one of the cardinal sins which one could commit was to laugh in church. And that is, of course,

because—the same reason judges don't like laughter in court: that laughter is threatening to tyrants. And if you can see God in the image of a tyrant, a monarch, who rules by violence—whatever kind of violence it may be; military violence, moral violence, any kind of violence—all tyrants are afraid. And they sit in courtrooms with their backs to the wall, surrounded by either side by their guards. And everybody who comes in, of course, has to fall flat on their faces because in that position it's more difficult to attack. And so, when a marine sergeant on parade salutes the flag he has a very serious expression in his eyes. That's not a time for laughter.

And therefore, we have associated the word 'solemn'—as when we celebrate, in the catholic church, solemn high mass—solemn... solemn means 'serious.' And one of the great things—one of the fundamental insights that is underlying all Chesterton's work—is that the attitude of heaven is not serious. There's a famous passage in his book *Orthodoxy* where he says:

Things like stones are subject to gravity. They are heavy, they are grave, they are serious. But in all things spiritual there is lightness and, therefore, a kind of frivolity. The angels fly because they take themselves lightly. And if that must be true of the angels, how much more true of the Lord of the angels?

I have said in my funny way that there are four fundamental philosophical questions that human beings have argued about as far back as we can remember. The first question is: Who started it? The second question is: Are we going to make it? The third question is: Where are we going to put it? And the fourth question is: Who's going to clean up? But all those things suggest a fifth question, which is: Is it serious? Like when someone's sick and says to the doctor, Is it serious? Are you serious? But he would say that's quite the wrong question to ask. Not are you serious, because that would mean are you grave, are you heavy, are you ponderous, are you solemn? And in all these senses he would equate that with a kind of lack of spirituality. And it's much better to ask people not are you serious but are you sincere? In other words, are you with it, as we say in more current American slang. So, from his view the world is fundamentally not serious;

it is sincere. And beyond that—to go on to the higher mystery of his insight—the world is basically nonsense. Now, what do we mean by that?

In the Book of Job—which is the most profound book in the Bible so far as I'm concerned—there is raised the problem of the sufferings experienced by those who are just and righteous. And Chesterton has written a great deal on the Book of Job, and without quoting him directly I'm going to summarize what I've learned from him about this book because this is really very important about this whole theme.

The prelude to the Book of Job is in heaven and a conversation ensues between God and one of the angels called Satan, otherwise known as Samael. The word '-el' on the end of a name of an angel—like Gabriel, Rafael, Uriel, and so on—means 'divine being,' 'angel,' 'attendant of the court of heaven.' And the role of Satan in the Old Testament is different from the role of Satan in Christianity. The role of Satan in the Old Testament is: he's the district attorney of heaven; he's the prosecutor. And, as you will see in a court today, it is arranged that the prosecution is always on the left of the judge and the defense is on the right. So at the left hand of God—a situation which is not mentioned in the Creed—there is, of course, the prosecutor. At the right hand of God—for he sitteth at the right hand of the Father—is our only mediator and advocate, Jesus Christ, because he's the council for the defense. And he happens to be the boss' son; puts him in a rather strong position. Because, in the course of time, when you read reports of cases in court and you get very familiar with court procedures, you always start having sympathy with the accused. And, therefore, antipathy towards the prosecution because the prosecution's always putting people down, who are saying nasty things about people. And the defense is always trying to say nice things about people. So, therefore, there's popular enthusiasm for the defense and popular displeasure for the prosecution. And it was for this reason that the particular angel called Samael, or Satan, was in due course of time turned into the devil; the enemy of all things good. Whereas, actually, the devil in the Book of Job is a loyal servant of the court of heaven. It's just his job to do the prosecution. So he proposes that God try Job. He said, You think you've got a virtuous follower in Job, but he's only virtuous so long as he's prosperous. You see what happens when you visit him with suffering, and then see if he's loyal to you. So God does

exactly that and he visits Job with all these plagues. And then the three friends of Job sit around and they try to rationalize why all this is happening. They say, in effect, you must have committed some sort of secret sin, otherwise you wouldn't be suffering.

This is the reasoning of the Book of Deuteronomy: that if you obey the law of God you will prosper. And the Hebrews were eternally puzzled as to why this didn't work out. So the Book of Job highlights this question. And all the advisors of Job—the three men who have this discussion with him while he's covered with sores, and sitting around in some wretched pad with all his property lost and his family in trouble, and so on. And he cannot see any sense in their arguments. And finally, God appears at the end; in the 28—what is it?—28th chapter. And he comes in a whirlwind. And he refutes the advice of all these three friends. Who is this, he says, that darkeneth council with words without knowledge? Now, stand you up like a man and answer like a man! Were you there when I laid the foundations of the Earth? When the morning stars sang together and all the sons of God shouted for joy? And then he goes on to ask Job a series of questions which include such questions as, Why do I send rain on the desert where no man is? Can you catch the leviathan with a hook? Can you bind the influences of the Pleiades and make them work for you? Or Can you loosen the astrological influences of this constellation of Orion? Can you do all this? And what is it all about?

So a series of questions are delivered to Job, none of which have any answer. And the effect of these questions on Job is to solve his problem. And ordinary interpreters of the Book of Job always say that this isn't really the answer. They say the Book of Job raises the question and doesn't answer the question—it does answer the question! It answers the question by asking the questions, all of which seem to reflect that, in some curious way, the universe doesn't make sense. Why do you send rain on the desert where no man is?

Now, what about that? See, our trouble is that, where we really get into difficulty in life is that we expect everything to make sense. And then we get disappointed. We expect, for example, that time is going to solve our problems, that there's going to come a day in the future when we will be

finally satisfied. And so things make sense—we say of something it is sensible, it is satisfactory, it is good, because we feel it has a future, it's going to get somewhere, and we're going to arrive. Our whole education is programmed with the idea that there is a good time coming, when we are going to arrive, we're going to be there. When you're a child, you see, you're not here yet. You're treated as a merely probationary human being. And they get you involved in this system where you go up step by step through the various grades. When you get out of college you go up step by step through the various grades of business, or your profession, or whatever it is. Always with the thought that the thing is ahead of you. See? It's going to make sense. And perhaps the universe doesn't work that way at all. Maybe, instead of that, this world is like music, where the goal of music is certainly not in the future. You don't play a symphony in order to reach the end of the symphony. Because then the best orchestra would be the one that played the fastest. You don't dance in order to arrive at a particular place on the floor. So Chesterton's view of the world is an essentially musical view, a dancing view of the world, in which the object of the creation is not some far-off divine event which is the goal, but the object of the creation is the kind of musicality of it, the very nonsense of it as it unfolds.

And so, when you talk sense your words refer to something else. In other words, if I talk about tables and chairs, these sounds that I'm making—'tables,' 'chairs'—refer to something in the physical world. The sound 'table' is not the table, but it refers to this [Alan knocks on a nearby table]. But then, when we ask What does the world mean? What does the table mean? The word, the noise, 'table' means this: [Alan thumps on the table again]. Now, does this have a meaning? What is the meaning of life? If we ask the question What is the meaning of life? we are treating life as if it were a set of words, a set of symbols. But it isn't. The real great insight is that these things don't have any meaning.

Now, in ordinary way of talking in the West we would say that's terrible! Something that has no meaning is awful! A meaningless life, you see? We say that about the most dreadful kind of life. But Chesterton is trying to say that the meaningless universe, the nonsense universe, is just great just because it doesn't mean anything. It is because God himself is dancing. He's playing. He has a poem of God as a child and he's playing with a

windmill, and the fans of the windmill are the four great winds of heaven. And the balls with which he's playing are the sun and moon. And the whole idea, therefore, then, is that existence itself is a magical play, and it's therefore nonsense in the sense—the special sense of nonsense—that it is something going on which does not refer to anything except itself. When we say 'nonsense' we are saying it for the delight of the words and not for anything that they mean.

'Twas brillig, and the slithy toves

Did gyre and gimble in the wabe:

All mimsy were the borogoves,

And the mome raths outgrabe.

Or better, from Edward Lear, who said of himself—he really drew the portrait of Chesterton:

His body is perfectly spherical,

He weareth a runcible hat.

And so:

There was an old man of Spithead,

Who opened the window, and said,—

“Fil-jomble, fil-jumble, fil-rumble-come-tumble!”

That doubtful old man of Spithead.

Or:

Plumpskin, buffskin, pelican, gee!

We think no bird so happy as we.

Plumpskin, buffskin, pelican jill!

We think so then and we thought so still.

You see? Now, he says that—in this kind of marvelous playing with the voice, and with words—you have something nearer to the nature of reality than you do with statements that make formal sense. Even though this man, Chesterton, was a great believer in reason. And, you know, in the Father Brown stories there is an occasion when Father Brown spies the criminal masquerading as a priest because the man says, Well, we cannot find out God with our reason. Or All the things of divine are beyond reason and we must learn to suspend reason. And at that moment Father Brown knows this man is not a good catholic and not really a priest at all. Because St. Thomas, you see, bases everything in saying there is a consistency between reason and faith. And Chesterton believed in that very strongly. But that didn't prevent him from seeing the deeper mystery that there is a kind of super-reason in unreason. But not just pure unreason, but in something that we recognize as nonsense in the sense that Edward Lear and Lewis Carroll wrote nonsense.

Now, this is an enormously important thing to understand. What is the difference, shall we say, between inspired nonsense and mere bosh? And this is what he's trying to point out. There is a kind of nonsense which we could call 'magical nonsense,' and there's a kind of nonsense, on the other hand, which we should call just 'trivial rubbish.' So it is the nonsense—divine nonsense has this extraordinary humor with it, which he tries to evoke in saying that it is a great thing to look at a rhinoceros or a hippopotamus, creatures who do exist and look as if they don't. A poem in which he brings this out is called The Fish.

Dark the sea was: but I saw him,

One great head with goggle eyes,

Like a diabolic cherub

Flying in those fallen skies.

I have heard the hoarse deniers,
I have known the wordy wars;
I have seen a man, by shouting,
Seek to orphan all the stars.
I have seen a fool half-fashioned
Borrow from the heavens a tongue,
So to curse them more at leisure—
—And I trod him not as dung.
For I saw that finny goblin
Hidden in the abyss untrod;
And I knew there can be laughter
On the secret face of God.
Blow the trumpets, crown the sages,
Bring the age by reason fed!
(He that sitteth in the heavens,
'He shall laugh'—the prophet said.)

So he sees in a goldfish—you know, those kind of Disney goldfishes which have all sorts of tails and fins and complications, with their big goggle eyes—what on Earth are they doing? You ever thought about that, you know? What is this, going on? I mean, does it have a purpose? Goldfish, you know, they eat and they absorb things in, and make more goldfish, and they go on making goldfish, and more goldfish, and we don't

even eat them! Maybe something does that we, finally, eat. But fundamentally, what's the point of a goldfish?

A goldfish is a solemn thing which keeps on going 'round, (you know?)

And it keeps on going 'round and 'round and 'round and 'round and 'round,

Lives beneath the water but is very seldom drowned,

Which is because it keeps on going 'round and 'round and 'round!

Isn't going anywhere at all! It's just going as children like to go Bwee-bdwee-bwee-bdoo-bwee-bdwee-bdoo-boo-bee-bwup! Or fill jumble, fill jumble, fill rumble-come-tumble, that doubtful old man of Spithead. That's what's happening. And so (in very profound theological ideas) it is said, you see, that when we finally go to heaven and we join the choirs of the angels—what are the choirs of angels doing? Well, they're sitting around in heaven—or actually, dancing—singing Alleluia, Alleluia, Alleluia! You know? When you sing on Easter Jesus Christ is risen today, Alleluia! what is this Alleluia? Well, I must assure you, it doesn't mean anything. It is a sound of delight, but of no other meaning. It is an expression like whoopee! You know? When somebody's riding a surfboard and they're going down, heeeeeeoowww! It's just like that, you see? Well, what's the point of that?

The point of it is itself! It has no point beyond itself. It's there. It's arrived. It's in a complete present, it is here and now. And that's what it's all about. We say to swing it. Get with it. And that is, of course, what all those angels are doing. The beatific vision—that means, the word beatus in Latin, we translate it 'blessed,' but that's a rather pious word. It really means 'happy,' 'joyous.' Beatus And so all those angels—as Dante describes it in the Paradiso, when he first hears the song of the angels—he says it sounded as if it were the laughter of the universe. And what? No laughter in church? Well, we're supposed to be a small replica of the beatific vision, and of the angels gathered around heaven, represented by the altar—you know, the throne of God. Why associate all this with solemnity?

You see, Sunday is a very interesting institution. It's a kind of modification of the Jewish idea that, after the six days of creation when God was working, he took a day off. Holy day. That was, as it were, the culmination of the six days of work. In Christianity, of course, the Sunday is the first day of the week and not the seventh day, the Sabbath. But the same idea is involved: that once in every six pulses there is a seventh pulse which is a little space of time to take off. Now, six days of your life—say you're working, and you're being responsible, and you're earning a living, and you're being serious. If you do that all the time you're going to go quite mad. You're going to be like a bridge—a steel bridge—which is so rigid that it has no swing in it and, therefore, it will fall apart in a storm. For in order to be sane, every human being must allow himself a little time in life to be insane, to let go, to stop trying to control everything, to stop trying to be God and just go Bwee-bdwee-bwee-bdoo-bwee-bdwee in whatever way you want, see? So when you go to church on Sunday, that's what you're supposed to do! You're supposed to take off from all this thing of laying it on. We've made the mistake, when we go to church on Sunday—present company excepted—but most preachers lay it on! They say, This is what you ought to do! That's what you ought to do! You haven't been conducting this right! And so on, and so on, and nobody gets a vacation. Nobody gets a holy day, holiday, a Sabbath, time off.

So when you go, the whole idea of church is that this is the place where we can get back to the fundamental sanity of nonsense, and sing Alleluia with the angels around the center of the universe. Which is, actually, manifesting these stars, these galaxies. For what? It's a firework display. It's a celebration. You say, Today there will be at 11 o'clock on Sunday, or whatever other time it is, a celebration of the holy communion. Do you celebrate? Or do you comport yourselves as if you were attending a funeral?

I used to be a chaplain in a university and I used to say, There will be a celebration of the holy communion at such-and-such a time on Sunday and, incidentally, if you come here out of a sense of duty we don't want you. Better be lying in bed or going swimming, or something. Because what this is is: we are going to have celestial whoopee! And we're going to enjoy it! That's what you're supposed to do instead of coming in and saying Ungh!

You know, you're going to go to this thing and you're going to feel how awful you are, how undutiful you've been, how absolutely terrible you've been. And however can you expect to be anything more than terrible if you don't really enjoy your religion? That's what's going to give you the strength and the power to be something other than terrible. But if you just go in and make your religion an occasion of saying, Oh, we've been terrible and we're awful sick, and we need help, and here's the holy communion which is your medicine, and I hope it tastes nasty, you know? That's awful. It doesn't get to the center of the thing, you see, which is: Chesterton put it in another poem where he said—it's called *The Song of the Children*—and it says of Jesus that he taught to the adults:

He taught them laws and watchwords,

To preach and struggle and pray;

But he taught us deep in the hayfield

The games that the angels play.

Had he stayed here for ever,

Their world would be wise as ours—

And the king be cutting capers,

And the priest be picking flowers.

Because that's the sense of the thing, fundamentally. That everything that's going on is a sort of jazz. A ba-doo-ja-daa, ba-hoo-da-daa, je-doo-be-dah, de-bup-ah, de-dup-ah, de-dup-ah, and everything in the world—the flowers, the trees, the mountains—all going ga-joo-de-doo, ga-joo-de-doo, ga-joo-de-doo, ga-joo-de-doo, ga-joo-de-doo, ga-joo-de-doo, ga-joo-de-doo. And we have piped you and you have not danced. We have mourned you and you have not wept. You won't join the game because you human beings think you're so special, and so serious, and you've got to make sense of it all. There isn't any sense to it! Just join in, come on! Make

ba-joo-dee-dah, ba-joo-dee-dah, ba-joo-dee-dah with the whole thing. And finally, you'll be singing Alleluia with the angels.

Fundamentals of Buddhism

I'm continuing this program with talks on some of the fundamental ideas of oriental philosophy. But before going on, I want to refer back to something that I said in the last programme in which I was talking about Hinduism which may possibly have been misunderstood. At the end of the programme, I was referring to certain trends in modern Hinduism which I described as being of a somewhat namby-pamby nature. Perhaps that wasn't quite the right phrase because that suggests weakness what I really wanted to suggest was bloodlessness lack of earthiness, or excessive spirituality. And I think this arises in certain schools of thought. From a wrong interpretation. Of the great commentator Shankara. Shankara and Ramanewja, probably the two of the greatest medieval Indian commentators on the will punish obs. And. The traditional scriptures. And the way some people interpret this is somewhat as follows. That. There is but one reality which is Brahman. Which is without form. Without any quality that the mind can imagine following the usual method of description by negation. And that this, being so, it excludes there being any reality whatsoever to the seeming multiplicity of the physical world. And other words the physical world that we perceive with our senses is in reality simply not of there. And there is even no cause within reality for it seeming to be that and this is rather like the Christian Science doctrine of mortal mind, producing the era of suffering and physical existence. That it has no reality at all, and our seeing of it. Its seeming to be real again has no basis within the divine reality which is the sole thing that exists now this is an interpretation of Shankara which I believe to be fundamentally wrong. I don't believe that Shankara can correctly be interpreted as saying that the world of sensory experience which this to my mind a wrong interpretation of his school identifies with Maya. I don't believe that this is the way he ought to be understood.

Maya, I can think of passages in Shankar where my yard is given a much more positive sense where the world is not to be considered. Identical with Brahman in the sense that it's not really there and Brahman is the only

reality which exists. But rather, that the world is Maya is illusory only in the sense that we do not see it to be one with Brahman just as it is. The seeing of its one this with Brahman does not involve its disappearance and if it does then we've got not a non-dualistic doctrine a tall we've got an extremely dualistic doctrine. Because after all if there is the seeing of an illusion. Supposing you say what you see I. The illusion isn't really there but you can't deny the fact that you see it. And then if that seeing off it has no basis in reality if that in turn is an illusion and the illusion that one sees an illusion is an illusion then you've got a principle that is fundamentally distinct from the Supreme Reality, and in a way stands against it is not explained by it is not grounded in it and therefore this is a highly dualistic form of thought. And as a result all fundamental dualism is lead to. Consequences in feeling and in conduct which are world beating. And this is seems to me why there are trends in modern Hinduism to be excessively spiritual, to regard all sense knowledge as basically evil, in the sense of being fundamentally. And I mean fundamentally unreal.

And this in other words is what I want to educate about these trends in modern Hinduism which I do not feel are representative at all of either Shankaar's doctrine or the doctrine of the punishments upon which the whole tradition of Hinduism is based. Now then today I want to go on to the subject of Buddhism. Buddhism originates in India, somewhere between six and five hundred B.C.. There is always some conjecture about the exact dating of individuals at this time. But it was during this period that there lived a man called Gautama. And Guatama was the son of a king or perhaps tribal chief. Who lived very close to modern Nepal in the north of India. And Buddha is a title given to this man wasn't his proper name just as Christ is not as it were the son name of Jesus as when we say Jesus Christ we should correctly say Jesus the Christ Jesus the anointed one and in the same way one should say not Gautama Buddha but Gautama the but her for blood means an awakened one. A man who woke up. Who In other words, you must understand this term within the whole Hindu tradition a man who is no longer spellbound by Maya, by the seeming separateness of all the things in this world. That's one of the forms of my yard. And so it would have is not a unique historical character. That can be and it is supposed that there have been, innumerable Buddhas.

But, the idea of it is related to the Hindu idea of an avatar. Which means an incarnation of the Godhead in human form. But I don't think of it as an incarnation of the Godhead. Because, they, although not rejecting the idea of a god or gods, relegate all gods to the world of my yard to the world of relative reality. And in this sense, it is felt in some way to be superior even to the gods let's put it in this way perhaps I'm a. You have seen what is a sort of fundamental illustration of the principles of Buddhism a diagram or map like thing called the wheel of life. And into death and versions of the wheel of life you will notice that the wheel is divided into six realms. And these six realms include human beings, gods or perhaps angels would be a better term for Devas. Spirits of Wrath called asuras, personifications of the destructive forces of nature. Animals. Then what are called naraka, or Purgatories. Preta, or tormented frustrated spirits with tiny mouths and immense that is having in other words immense appetite but very little means of satisfying it and then again humans. And the basic idea of Buddhism is that awakening Buddhahood can be attained only from the human state. Deliverance from the vicious circle which the wheel represents. Life considered as a vicious cycle. The gods are too powerful and too happy to concern themselves to be delivered. At the opposite extreme the people in the knockers the tormented souls in purgatory as it were are too miserable at the animals too damn they are sure those too angry the predators too frustrated. You can take this wheel as a matter of fact not as referring to any actual worlds other than ours of ghosts. All gods and Purgatories. But you can take these six realms as representing states of the human mind. And the human state as representing even mindedness what is called in Sanskrit the picture I can imitate. Now when it is said then that one can become a Buddha only from a human state it means you see that it brought us down about the gods as being released from the wheel. In a very popular but as I'm of costs as in popular Hinduism. The idea of the wheel is taken rather literally it is in other words believed. That the individual passes from life to life. And is rather funny if that although Buddhism actually denies the existence of an individual soul as an enduring reality Nevertheless in Buddhist countries it is popularly believed that some sort of equivalent of the soul passes from life to life and that if your present life is miserable it is a result of foolish actions in the former life but if in this life you act wisely your birth in the next life is to be more fortunate and you may get up of cost to the heaven world of the world of the gods.

But human birth is the thing that is always regarded as most fortunate. Because you can be tied to the wheel not only by chains of iron, and that is to say by acting wrongly You can also be bound by chains of gold. That is by acting wisely so as to inherit good fruit. Now, of course very sophisticated Buddhists not only in modern times but in engine Times did not take this idea of reincarnation literally. They looked upon it in quite a different way. And just as they regarded the six worlds as states of the human mind so they regarded reincarnation as something happening in this life. Those of you who've read T.S. Eliot's Four Quartets will remember the passage perhaps where he says. That those who have just left the platform of the station on a railway train are not those who will arrive at any destination. Those who in other words, walked in at the door of the Roman are now sitting down in chairs are not the same people as those who stepped in at the dog. We are in other words, constantly changing. Just as we know physiologically speaking, that our bodies are, in all their molecular structure completely changed every seven years or so so that we are as it were not enduring entities but rather something like a university where the faculty in the students and the very buildings themselves may change completely within a span of years and yet somehow the university or something by way of a pattern, goes on.

And so in this sense, freedom from reincarnation would be by very sophisticated Buddhists interpreted as freedom from the illusion that the person who came in at the door is the same one now sitting in the chair. And that in its turn signifies freedom from an emotional habit the habit of grasping at one's own life. At seeking for continuity. And you see the idea of continuity in Buddhist philosophy is that we desire continuity in order to perpetuate our past. In our past in other words, we have accumulated various things experiences material goods knowledge but use power, so on. The desire for continuity is the desire for the perpetuation of a past self or string of selves with which we identify ourselves. And, Buddhist insight involves the recognition that the past is perpetually vanishing. There really is no past to continue. And therefore to cling to it to identify oneself with it is to perpetuate an illusion resulting in incessant frustration resulting indeed in that very vicious circle which the symbol of the wheel represents.

Now Guatama made it very easy to summarize his teaching. He was really quite an addict in what we call name on ix in putting things in simple form so that they could easily be remembered. And he summed up the whole of his doctrine and what is called The Fourth noble truths. And although it becomes sometimes awfully boring to read fundamental. Text on but isn't much you just go over these things again and again I think it's only boring if one goes over them in a very formal way that these texts adopt really it's a very skilful outline of the nature of but as I'm and it's based on an old medical formula in ancient India, as in almost all ancient cultures. Every activity was ceremonial lives and when a physician came to pay his call he gave his diagnosis in a ceremonial way he made for pronouncements. The first pronouncement was the name of the disease. The second, the cause of the disease. The third, the curability of the deed to the disease. Can it be cured yes or no? And if it can be cured the fourth pronouncement is the giving of the prescription. And that's exactly the form of go to most summary of his doctrine. He said in other words the first principle is that mankind and indeed all forms of life suffer from a disease which is called in Sanskrit Dukha. And the most general translation of that word is suffering. To come in suffering in all its forms. Moral physical spiritual. But Western interpreters of Buddhism have sometimes represented him as saying that life is suffering period. In other words of enunciating a highly pessimistic and world hating doctrine that to be alive is to suffer and that in other words the amount of joy of positive pleasure in life. It is after all so negligible that the game is not worth the candle. Now, if one study is the method of teaching of sages in ancient India, you have to realize that one of their fundamental pedagogical gambits. Is. To arrive at their point of view they wish to inculcate. By is exact method, when we walk you know we put down maybe first the left foot then we shift to the right foot then the left foot then the right foot and in this way we go along neither to the left not of the right but straight ahead. And you find to that in thought. That the human mind tends to go from position to position but it always when it settles on any fixed position we can always point out that that position is an extreme. For example, in scholastic philosophy in the Middle Ages whence and Thomas Aquinas fastened on the idea that God is fundamentally of being, a Buddhist philosophy would point out that he had settled upon an extreme that has an opposite nonbeing. And that therefore his position needs to be corrected by the opposite position somebody else will get up and say No no

God is not being God is nonbeing. And from this facing of opposites with each other, we arrive at what Buddhism is sometimes called the middle way doesn't mean the compromise position. The middle way is the doctrine of relativity. Of showing that all positions or experiences which we can formulate, must always be perceived on known. By contrast with opposites.

So in other words, Buddhist doctrine that life is fundamentally do cause of suffering. Is an antithesis. Directed towards those people who believe that the object of life is to attain sukha, or sweetness, pleasure. He is saying in other words. You cannot experience pleasure except in reference to non pleasure. And therefore the more you pursue pleasure the more non pleasure will arise to frustrate you. The more you pursue permanence the more you will feel the empowerment of things. And so it is for after all when we are bent on enjoying ourselves we become at that very moment curiously aware of how rapidly time is slipping by when on the other hand we are not enjoying ourselves we become curiously aware of how time is dragging. So then Dukha, arising from an exaggerated pursuit of sukha, its opposite, becomes the basic characteristic of life. And he goes on to say in his second principle that the cause of this. Is Krishna or grasping sometimes translated desire and indeed I believe the word Trishna does underlie Etymologically the English word thirst. But Trishna is not quite desire for example one's appetite when your haven't eaten for some time and you get hungry this is not Trishna. It's a perfectly natural occurrence. Trishna is based in turn on. Which means unwisdom. Which is the way the Tibetan scholars around here Alex women like to translate it. It's good translation and wisdom of. A simple lack of insight, lack of consciousness, lack of well a special sense of ignorance not the ordinary sense of ignorance of not being informed but ignoring us. Action based on ignoring something. And ignorance is not realizing the relativity of experience is not realizing the inseparability of pleasure and pain existence and non existence life and death up and down good and bad. So that as a result of such ignorance, or unwisdom, people try to separate these opposites from each other. To corral, to gain the good ones and to exclude and I have laid the bad ones. And as a result of that because these opposites are exist mutually. They go around in circles and that mutual existence of these opposites is a really seems to me the basic meaning of the doctrine of karma which is involved in Buddhism the doctrine of conditioned action. Which put a miser in the phrase this

arises that becomes. In other words, without this on the one hand this on the one hand always implies that on the other good on the one hand implies bad on the other and so on example. And so, if a person a person becomes involved in karma involved in conditioned action leading to a vicious circle if he is ignored of the into dependence of all states of experience.

So then the third truth the cure of this do cause. Suffering is the truth about Nirvana. Nirvana is most grossly mistranslated word in all foreign languages it's probably. Because we early scholars of Buddhism translated as annihilation and nowadays Nirvana means the state of being doped up to most people popularly used as being. In ecstasy in a kind of dreamy bliss. And your vomit doesn't mean not at all it's a state of being very, very wide awake. State of being completely aware. But the etymology of the word is disputed. There are several etymologies that you can offer and so I just choose the one I like. And that stew blowout. As when, having tried to hold one's breath you discover that you can't hold it you lose your breath by holding it therefore you expire you D. spy rate. And so you he have a sigh of relief. And so only advantage is the side of relief the expiration or despiration. In other words, the giving up of the attempt to clutch at life. To hold it in a fixed form to resist change to separate the good side of things from the bad side and I hate the bad side it is the giving up of that fundamentally contradictory self contradictory kind of conduct.

And so then in the fourth truth there is, set up the Noble Eightfold Path. But as prescription for to cause. And the Noble Eightfold Path is really in three divisions one of which concerns itself with understanding might almost say intellectual understanding of the doctrine. That one is concerned with conduct. And the third part of it is concerned with the state of consciousness or meditation. Now, to summarize them briefly one of the first stages of the path as a right view. Or I prefer to translate the word samyak, not so much as right. But as perfect in the Greek sense as telos or complete. And, thus, to have a complete view, is a view which does not take sides, which takes the middle path. Which in other words, does not go off to extremes. And so, on the part of the eightfold path that is concerned with conduct of Buddhism is often represented as having a very exalted ethical system and this is true in a way it does. But also one must recognize the difference between Buddhism and Christianity as any rate as Christianity is

ordinarily taught is that these ethical ideas are not commandments. They are really, forms of expedient conduct. The Buddha counseled his followers to take upon themselves sudden obligations they have not killing not stealing, and not exploiting the senses of not getting drunk or intoxicated with poisons, not lying. Because, not because these were against the will of God or against the fundamental laws of the universe but the. As they are inexpedient forms of conduct for a person who wants to wake up call if you get thought only doped up you're not liable to be very wide awake.

And then finally, the end of the path the last stages of it are concerned with one state of consciousness. With the being...the with the process of what is sometimes called meditation. Or of bringing one's mind to its maximum awareness through clear recollection. And then finally the attainment of what is called somebody which means integrated consciousness consciousness no longer under the influence of avidya. No longer bamboozled and fooled by the apparent separateness of things which are really inseparably interlinked. And thus samadhi could be called Integrated a unified consciousness in which it is seen that the subject of the now is inseparable from the object the known that man is inseparable from the totality of life and so on and so forth so that somebody at the end of the eightfold path might be described as being the entry to all realization the making real of the state of nirvana, which constitutes in time being a Buddha.

Daylight Savings Time and God

The last Sunday in September is the day when we go through the amusing ritual of putting our clocks back, and to revert what some people might call God's time. I say amusing. Because the practice of altering our clocks for saving daylight has always 'jiggled my funny bone just a little.' It seems a kind of way of fooling ourselves into getting up an hour earlier. Why don't we just get up an hour earlier and let it go at that? Well I suppose in practice the idea of putting the clocks back has something to be said for it in the way of saving a reprinting of all the airline and railroad time tables. But it's very illustrative of ways in which human beings fool themselves. And it offers what I feel to be a very instructive parallel to a lot of argument that is going on these days about going back to the old time religion.

I've speculated a good deal about this, and I'm not at all sure why, in certain circles, there is so much talk going on about God. And there is a kind of flavor in this revival of the idea of God which I don't like, it's sort of sinister. People want to write into all sorts of documents that this country is under God. And in this idea of God of course there speaks the projection upon the cosmos of the benevolent despot, the great patriarch. Because of course, it's very convenient for people who want to play the part of benevolent despots and authoritative patriarchs to feel that they have some backing.

It is as I suppose. You feel a greater sense of authorization if you get up an hour earlier by doing so at the usual time through altering the clock. But the practice of changing the clock illustrative of another phase of this whole recrudescence of the idea of God. The patriarchal God. Because in going through all the various reasons which in the past twenty five or thirty years theologians have been advancing for reasons why God should be believed in, this kind of God should be believed in, I come across only one really dominant argument. That is to say, I've never found anybody yet in writing in modern times who has advanced what seemed to be any new simply logical reasons or metaphysical reasons for the belief in God. Most of these are simply repetitions of things that have been said hundreds of years ago.

Most of the reasons that are now advanced have to do with what an advantage it would be to human life and human society to believe in God. In other words, we have problems with juvenile delinquency. What a pity, if outside the Roman Catholic Church we cannot scare these children into good behavior by frightening them with ideas of hell and judgment. Or appeal to that sentiment by saying for example, look what your sins have cost to Jesus Christ, you put another nail in the cross. But it's a strange thing isn't it that sin has been running around in the world for an awful long time and people did desperate depraved and horrible things. When the old time religion was in full swing. And one of the reasons why it nowadays we think the world is going to the dogs. Is that everything happens not only on a much larger scale, that everything happens within the sight of everybody that is to say there's so much news, there's so much communication. And you just slug someone in a back alley in San Francisco one night and it's all over the headlines in the morning. And therefore, the presence of evil is

perhaps drawn to our attention more than it ever was before. But people very frequently say that the belief in God is necessary for preserving the dignity of man. In other words, if a man, say in the conception of the nature which is held by people we might call mechanists, if man is simply a piece of machinery. Of very complicated machinery which emerged as a result of the blind. Changes and processes of nature then he is qualitatively no more than a cow. Or any other domestic animal. He's just more complicated that's all. And therefore the argument goes, if human beings are only a mechanical cattle, and cattle are only very complicated chemical mechanisms, just as we exploit cattle, breed them impersonally, kill them when we want to eat them, and generally push them around. So also, if man is just this kind of thing there's no reason why we shouldn't just push him around there's no reason why we shouldn't gas millions of Jews if we find them inconvenient, and so on.

In other words, that the basis of the argument is, if man does not have some sort of guarantee beyond himself for his dignity, for the rights of his personality, then all chaos can break loose. And the Human being can be simply degraded, as indeed he has been degraded in modern times. But it seems to me a very very false and perhaps dangerous argument to say that the foundation for this dignity must be a belief in God. Because the believer in God will say no you must not humiliate human beings in this way. You must not despise human dignity, because man is a child of God. Every individual human being is the object of the love of God, has a special destiny planned for him by God, and therefore for this reason and on this authority, you must not treat human beings as if they were just machines are just animals.

This is similar to the argument frequently produced by Roman Catholics in commending the superiority of their form of Christianity to the various forms of Protestantism. They always say, well, what you believe as a Protestant is simply a matter of opinion, and it's your own private judgment whereas a Catholic suspends his private judgment and believes because he also believes that he is bound to believe, it is an act of obedience. And this is an equally silly argument. Because it simply conceals the fact that to believe that you are bound to believe in something that you believe it's a matter of personal opinion and private judgment. It's an act of private

judgment to accept the authority of the church. And in the same way, if we say the guarantee for the dignity of human personality is the existence of God, I'm going to ask then what is the guarantee for the existence of God? I suppose this is a know sort of sophisticated form of the child's question, if God made the world, who made God? But it really is rather a good question because you can answer nobody made God. God isn't made, and then the child can come back if he's smart enough well why couldn't you say the same thing about the world.

And so in the same way, when we say only God can be the guarantee only belief in God can be the guarantee for the proper treatment of human beings then we must ask again what is the guarantee for belief in God. And it's simply, in other words, a way in which we can kid ourselves into a certain forms of conduct by laying down a premise just as we kid ourselves into getting up early about changing the clocks. And while as I said, changing the clocks may be actually a practical idea because of the time tables and all the reprinting of stuff, it's very important to know what you're doing when you're doing it it's very important to know that you're just changing your standard of measurement and that you made the standard of measurement that the clock is your invention. And so in the same way, it should be important to realize that when people start talking about the need for belief in God again, this is just a gambit in the art of ruling. A gambit in the art of preserving law and order. Only, it seems to me in this case to be not so useful and in many ways to confuse the issue profoundly. Because it gets us into the strange state of mind which you find so often in discussing the problems of human conduct and thought, that people want to base their actions and their ideas upon some sort of authority. And it's strange this, for a Christian, because it said of Jesus that He spoke as one having authority and not as the scribes. And to have authority is a very different thing from following authority. The scribes, you know, were the sort of people who never said anything unless they could quote somebody else as having said it before some great and Rabbi of the past to whom time had given the kind of distance of divinity.

And in the same way, when we nowadays in our academic world get what is called an authoritative text, you may be sure that the author Orotate of text is absolutely jammed with footnotes nobody dared say anything without

documenting it. But, in a deeper sense than that, people want to feel that certain forms of conduct, certain ways of life, are not things upon which they can safely embark unless they are in some way authorized. That is to say, unless they feel that this is in accord with the will of God, or if they don't believe in God In that sense they want to feel that it's in accordance with what is natural with what is in accordance with the laws of nature, or else it's perhaps with what is in accord with the opinions of a very celebrated person or with some other forceful and successful group of people. There's always this curious desire to found what one does and thinks on authority. To get, as it were some basis outside one's own judgement and one's own will for doing what you're going to do. And then of course, when it what you do is challenge either by other people or by life itself you can say well I, really I wasn't responsible I acted on authority, but without authority.

And so we can see how in this sense we kid ourselves by invoking and inventing reasons for what perhaps deeply we are going through what we want to do and we're going to do anyhow reasons which somehow seem to pass the buck, to shelve the responsibility on a higher shelf. At the same time, you might think that an argument of this kind would Come on naturally from a person who is simply an atheist. Who believes that the universe is a drifting process that is absolutely without any sort of authority behind it. And that man finds himself in this process and has to make the best of it that he can make. And this is the difficulty which I think today, very very many thoughtful people find themselves in. The notion of God, as presented by tradition whether Hebrew or Christian is utterly distasteful. But mechanistic atheism is equally distasteful. Because as a matter of fact both of them rest upon the same premises. The atheists, mechanistic universe, of course, not all atheists would be mechanists but very often they are. But that universe is based on the same premises as the universe of the theist. Atheist and theist seem so often to be heads and tails of the same coin, acknowledging the same premises because both of them naturally look upon the universe as an artifact, a machine as an artifact only in the case of the atheist or what we might call the moon mystic naturalist the architect has disappeared and there is just left the machine. It's all part of this thing which I've mentioned occasionally our attitude of regarding the world as a collection of objects.

And we of course have justification for this in so far as looking at the world as object has been such a successful way of dealing with it we don't pray to the wind anymore. We don't speak to the rain or to the sun as if they were people we look upon them as objects, that is to say, just as not people. And of course as time goes on we know more and more objectively and scientifically about ourselves in our own minds we can regard ourselves as objects. And so indeed, we do get the depersonalization of man which the people who call for a return to belief in God or at least some of them are afraid of and we get this feeling of the Universe being hollow, empty, a rattling shell. An altogether impoverished affair, with no more any life in it it's all just hurrying atoms, as Whitehead said. Now, it's always seemed to me that the difficulty or one of the main difficulties with the Hebrew Christian idea of God is that it's much too specific. In fact, it's strange isn't it that many apologists for Orthodox Judaism or Catholicism or some sort of neoorthodox Protestantism, rather pride themselves on the specific character of their god and make fun of say Christian Scientists or new thought followers or liberal Protestants who have a very vague idea of God and they say oh these people are so we're really and so vague and so sort of the implication is that timid and haven't got the guts. Whereas we have a good strong definite belief. And they laugh about it and make jokes and have a great time, not realizing that it's precisely this specific idea of God as something not just unimaginable but having a nature which has been revealed, say through the character of Christ, or through the Scriptures or through the church, which is intelligible to man even if man can't know everything about it. But the difficulty you see with all these specific accounts of God is that on the very terms of a Jewish or Christian attitude to life then I don't address. They pretend to knowledge which nobody has the right to pretend to. They form a specific image in the mind of what God is. And that specific image in the mind is far more idolatrous than a specific image sitting on an altar, because it is more persuasive. And therefore, it seems to me at the same time, that while we cannot lose while I cannot utterly reject every meaning that the word god has ever had. I at the same time feel still. That I want to be able to have at least a symbol. Which will embrace the concept of the totality. Or worlds. By that, I don't mean simply an additive concept, world plus world plus world, just the total collection. Because I don't think this world is a collection it's only a collection of things if in the first instance you have split it up into things in order to think

about it. But if you think of the what a physicist might call the total field of phenomena, there's something that we can think about because we can't get our minds round it we can analyze it and measure it and so on and so forth but all we have is various projected systems of measures which we use in just the same way that we use the measure of time to chart the movements of life.

But time isn't up there. There isn't a kind of cosmic clock with calibrations on it. We invented it. But at the same time, the, I think of almost anybody of any sensitivity at all finds it hard to regard the total realm of physical nature as something which he can sort of shrug off and say well radioactive gas and machinery. Because it always makes us wonder there are various ways of wondering one way of wondering is to ask well, what explains it all? And that creates that kind of question in the mind which we call wonder. But that's not the only ground to wonder, Supposing I say well, perhaps to ask for an explanation of it all is the wrong question. That's only after all translating the history of what has happened into words. This is what we mean by an explanation. And explanations never fully explain because there's always more explanation that can be done more words that can be said, more events behind the events of history and so on and on forever and ever and ever.

What is also at the root of wonder is something perhaps more aesthetic is simply the admiration. The astonishment. That a world exists at all. And the realization that a great deal of it in fact, almost all of it, is something which influences us, rather than something which we influence. Now of course, if that is then something of which the world as an expression which we will just call X. Or, if we say energy like a physicist might say energy is a kind of devitalized word Strangely enough it means something mechanical like electricity. But we don't know what it is. And part of our difficulty is that wherever we look, with our eyes, with our instruments, we find only the surfaces of things and the surfaces it within surfaces so that there's only one place where we as it were have a very intimate acquaintance with what existence is, and that is in us.

But it's a strange thing that at the very point where we have the most intimate acquaintance with existence it is the least susceptible to objective

study, because it is too close it's the very middle of us. And it is there, in the unknown. and ultimately it unfathomable springs, of our life our action and our thought. That we are linked with. Whatever this X is, of which all the world is a manifestation. I don't want to say man... Manifestation is a curious word, because it sometimes suggests that. What is manifested. It's very different from that which is manifested. In other words, that while on the outside in the manifestation we see all the multiple and glorious variety of this world. What's on the inside must be somehow one instead of many, and therefore sort of an interesting live shapeless, something like wasn't it C.S. Lewis said tapioca pudding. Or Jell-O. or something like that. No, I only say manifested in the sense that there is a way, and we experience this way when we experience our own existence. In which the world is not accessible to our examination and our control in a very intimate deep way. And I would say it's there you see that our ingenuity stops. Not it doesn't stop at a dead halt it's slows down gradually as it penetrates deeper and deeper. And it's at this point that we could exclaim God, more perhaps as an exclamation of wonder than an affirmation of a theological proposition.

And I feel that it's profoundly important, not just to put out of mind the illimitable mystery from which we spring and from which we act. As something that just can be neglected. Because then indeed we do become what the theologians writely fear. We become inebriated with pride, we become cocky we become people who think that they can push the whole universe around and arrange everything just so and then we get into these enormous difficulties, like the Sorcerer's Apprentice who got hold of the magic, and didn't know how to keep it under control because he didn't have respect. He didn't proceed with a certain caution. And so, if anything it seems to me that the future of the idea of God will involve less definition and much more vagueness. And in this wakeness of clear delineation will lie this strength and the difficulty to exploit it by people who just want to rule human beings.

Constitution of Nature

As I think it over it seems to me that the high civilisations of the world have produced exactly three different views of the constitution of nature, of the physical universe. And to enumerate them I would call them respectively,

nature as a construct, nature as a drama, and nature as an organism. The first two, nature of the construct, has until very recently been characteristic of the Western world. The view of nature as a drama has been largely characteristic of India. And finally of nature, as an organism, has been characteristic of the Far East. I'd like to compare these three views and point out the certain of their advantages, disadvantages, and the ways in which they complement each other. And I think that was part of the interest of this is that our thinking more and more I've been fascinated by this, that are thinking about the world is strongly influenced by analogies. By, sometimes analogies that are almost hidden, so far back in the history of the thought of any given civilization or culture. That they have taken as something more than analogies, they are taken out almost you could say as logical patterns. And they are basic to our grammar, to our common sense, and to our attitudes, in ways that often go unsuspected.

Why don't we start with the Western view of the world as a construct? By this I mean, the the the physical world has historically in the west been looked upon as a created or manufactured article. The work of a creator external to the world, and this view has continued in many ways even after the rise of deism in the eighteenth century and the general tendency of the scientist to dispense with the hypothesis of the Creator, the idea still remains that the world is a construct analogous to a machine, and indeed obeying laws all plans in the same way as a machine obeys a blueprint. Even though the law giver and the planner himself seems to have disappeared. The basic metaphor though, underlying this is not so much the machine. As the work of clay the pot or the sculpture, of the modeled figure. For as you know it is said in the book of Genesis that the lord God created Adam out of the dust of the ground and breathed the breath of life into his nostrils.

And so our language, our poetry is full of all of allusions to the fact that we are really after all clay. Imperial Caesar dead, and turned to clay. Might stop a hole to keep the window away. And because of this figure, it is as I have often said come to mental to our common sense. But the world is formed matter. The forming the shape of the pot, the matter being the clay. And thus, we think of life as being basically. Something done to a medium the medium is stuff, a kind of ominous and inert self in out and unintelligent

goo, which requires an external agency to give it form and intelligence and life. And naturally because we have thought this way for so long it's a terribly difficult idea to abandon to get out of I had the notion. That, in the same way that tables are made of wood and houses of stone.

So we tend to think that trees made of wood and mountains of stone and people are flesh and all of it eventually reducing itself to the primordial goo that the universal Clay the primal matter, the formless original water over which the Spirit of God is said to have moved in the beginning of all time. Now, beyond the idea of the world as a work of pottery lies the most sophisticated idea of the world as a mechanism. In this western view of the world as a construct. As soon as men began to understand mechanical principles, it became extraordinarily convenient to make analogies between various types of machinery, and things to be found in the world. And it is really upon this analogy, that the great achievements of Western technology have hitherto been based. And, it's really very difficult to think that we could have devised our technology and that our practical sciences could have made such progress. Without the idea of the analogy between the world and a constructed machine. You see, one of the most fundamental things about a machine is that it is an assemblage of parts. And, the successful measurement and description of nature depends upon the calculus, upon reducing it to parts. You know the word calculus originally meant pebbles, and pebbles were one of the oldest methods of calculating. Counting pebbles. In a funny, kind of association of words, calculus is also calculating, in the sense of having a calculating attitude. Scheming. And scheming is associated with turning things to calculate. It is a sort of killing the world, reducing it from the living to the dead, from the organism to the machine. But nevertheless, it has had the most marvelous consequences so far as we are concerned and the cultures which thought of nature by analogy with drama and by analogy with the organism did not produce the technology that we in the West produced. Let me just for a moment, contrast the attitudes. The Indian attitude of the world as a drama. In Hindu thought, the world is not thought of as being made or constructed by God, but as being actually God himself playing a game. The idea of one single divine actor who is playing all the parts of all the creatures in the world imagining himself to be them. To see me as it were, myriads of masks behind which there is simply one where of the mask.

In a forthcoming book, the second volume of the masks of God is not published yet but I've seen a copy of Joseph Campbell. Contrasts the way in which the myth of the one who became to the one that became many, has gone into quite different directions beginning in ancient Sumeria, which constitutes as it were a sort of cultural watershed. It has flowed eastwards in one way and westwards and another to the east the idea that the one the Godhead in other words split itself. And dismembered itself into many parts quite voluntarily, and thus became the world as a play. To the west, the theme of the one who became many is different because, as he points out in the book of Genesis it is not the divine who becomes male and female it is the creature. In the Upanishads say the breed had the long ago punishment of the divine self. Is. Described as have a saying in the beginning of time let me become two and he splits into male and female and thus generates the world but in the book of end of Genesis it is not the Godhead who splits it is man the creature who is split into Adam and then into Eve.

But thus in the Eastern world we have the dramatic view, in India in particular. And although it's interesting to note that in say in the writings of the great philosopher Shankara and others the or very often encounter the analogy of the potter, or of pots as representing the world the roles are reversed. The it is the clay is used as the symbol, for the divine reality. Just as pots are all made of clay or as jewels or all made of gold. So, all things in the world are of one divine substance which is of the nature of the Godhead, or Brahman. Is interesting, the different use of the simile. And so, from the standpoint of the dramatic view of the universe, all the divisions and distinctions of the world are looked upon as being a kind of as if. They are in play, they are not quite serious. And this contrasts very sharply with what has been the characteristic Western view the distinctions in the world are the most important things about it. That they are deeply serious. The distinction for good and evil is an eternal distinction as is the distinction between the creator and the creature. The world in this view is not a drama. It is played not by actors, but by what we call real individuals even real persons although funnily enough as I suppose you know the word person is originally persona. The megaphone mask worn by actors in classical Greek drama.

Then thirdly, there is the organic view characteristic of China. In this there is no real thought of there being a divine creator or a divine actor behind the world. But rather the world is thought of as being self-moving and self-creating. The word for nature in Chinese means what is of itself so. When, in the West, a child asks its mother. Who made me? And she replies darling God made you and the child asked But who made god. She has to say nobody made God. And that is a great puzzle to the child who thinks of the world as a construct. And, it may be explained to the child if you like, that god makes himself, he exists off him self because he is existence. To put it in more theological language, he has the attribute called Say it. From the Latin OS A by himself.

Perhaps, some kind of off on telly but would ask the question well if that's true of God Why couldn't it be true of the world in the first place? Why did you have to make that additional step in the first place? If he did so he would be thinking more or less in the Chinese way. Which does not think of the world either as an artifact of some make all as a mosque or appearance warm by some sort of deeper reality. He doesn't, in other words, have a two level view of nature, as an appearance underneath which there is something else to explain it. He sees it all rather as self evident. As being something which regulates itself. And indeed alters itself. There is a sudden sense you see in which the Chinese view is fundamentally Or you could almost call it anarchical. Or if you don't like that word, you could call it democratic. A world which is self-governing. Not even through a president. But self-governing in every way a great and colossal an it because which moves itself in the same way as you and I move our fingers. Without directing them in the sense that we know exactly what we are doing and how we move them. We don't.

Now, I've said that the Western view is probably what made it possible for us to develop our highly advanced technology. By thinking about the world as a construct. We could think about the laws or principles, or plans, or regularities upon which it was based. We could think for example, of the calculus, of number, as the basic characteristic of the law upon which nature is based. By doing that, we caught on to the idea of thinking of all things as reducible to atoms to parts, to bits. And then by thinking of bits, we found

that we could measure the world very accurately, describe its regularities very accurately. And that gave us an astonishing degree of control over it.

But this is a point of view which is successful to a certain degree. It goes well up to a certain level after which it begins to develop complications. One thing, you could say, it has complications which of psychological on the one hand and practical and technical on another. From a psychological point of view, it's complication is that when it becomes common sensical to us to look at the world as a mechanism, we begin as humans, as people capable of feeling and love, to feel the external world rather alien to us. Yes, it's a machine. It's a great big automatic mechanical arrangement. Which, in essence, is simply stupid energy. We thereupon feel that it has nothing in common with ourselves, and perhaps even though we try to give the same sort of account of ourselves, and try to reduce our brains and emotions to some kind of neurological computer mechanism, that makes us in a way hate ourselves. Because soon as we start thinking of ourselves as automata, we begin ethically and psychologically treating ourselves as automata. We lose respect for ourselves and thereupon feel that what is central to us the feeling center of the person is trapped in a cosmos that is a mechanical night to match foreign and strange. We can see ourselves as a kind of ghastly accident. And I don't wonder that this engender has certain kinds of suicidal tendencies in our culture. So much for the psychological point of view. From the technical point of view, the analogy of nature with mechanism develops its own disadvantages after a certain point. That is to say, the disadvantage of trying to manage the physical universe as if it were indeed a an assemblage of separate parts or separable parts. The first sort of person to notice this mistake would be the extreme subject law medical specialist. Who knows for example. All about hearts or about stomachs but they're little about brains or lungs. And who treats one or going at a time and becomes unaware of the imbalances inflicted upon other organs by what he's done to the organ in which he specializes. Also in the same way, the specialist always tends to see the units of nature and to be unaware of that connection is all relationships, which are after all inseparable relationships with all the other parts.

There is you might say also, another technical disadvantage again which develops them in the course of time to this particular mechanical analogy.

And that is, that when you begin to rely more and more upon minute and careful description of the world. For dealing with it, and that of course involves the reduction of the world to describable units. The world then becomes terribly complicated, and it becomes increasingly difficult to keep track of all the minute units that you've described. Hence the difficulty of specialists in the various sciences communicating with each other and the difficulty of the scientific specialist in communicating with the layman. The whole thing becomes much too complicated to manage. And this then means that. The more we know, the greater our skill in managing the world as a mechanical construct, the more difficult it becomes to control because it becomes increasingly complex. We talk endlessly about the increasing complexity of political, social and economic affairs which makes the problems of the world increasingly unintelligible to even the average well-educated citizen.

Now, it has been suggested that the Western view, nature as a construct, has in some ways done its job. And that from here on we need to explore to a greater degree, other views, perhaps the organic view of the Chinese where in we get a became really a harmony of points of view with our own sciences biology, ecology, and so forth. As if somehow this view had been tucked away in a store cupboard, waiting for us to be available at just the time when we needed it. The problem here is an entirely new one, because we're so used to thinking of our problems of controlling and understanding the world in terms of the methods of mechanical science.

Not so long ago, I was talking to Lyn White, who used to be president of Mills College, and he was saying that our academic world, values only three kinds of intelligence whereas it is said there are many more that at least seven I don't remember what all the seven were but he said that the kinds of intelligence that we value our first of all mnemonic. Which is the ability to remember. Computational intelligence, the ability to figure. And verbal intelligence the ability to read write and talk. But he said there is also social intelligence. And that is also kinesthetic intelligence. A kind of intelligence, kinesthetic, in which we learn as children to walk to run and throw and catch balls and to do all kinds of acts dreamily complex and very subtle actions without being able to describe, or counts what we are doing. Perhaps, in handling far more complex matters, and catching balls, or

skiing, or riding bicycles we may have unknown resources of kinesthetic intelligence for dealing with some of the problems that now face us. Here is the germ of an idea, which Chinese culture and Far Eastern culture in general suggest to us. Perhaps they themselves have only dimly begun to explore these things, but I think that it's in that direction that the future of practical philosophy and government of the world may lie.

Buddhist Mysticism

Just this month a new book has been published by Dr D.T. Suzuki called *Mysticism, Christian and Buddhist*. I'm not intending to devote this program to in review of this book as such but I call attention to it. Incidentally, it's published by Harper's in New York for three dollars and fifty cents. But I rather want to call attention to a particular theme, with which the book deals with will seem of a peculiar type of Japanese mysticism I suppose you'd call it, associated primarily with the title put design which is caution Shinju. Should issue are to know it by another name God of our land but isn't is one of the most popular forms of Buddhism in the Far East.

Spreading over China Japan found Tibet, originally had some following in India. But has undergone a very marked and special type of development in Japan. And what makes it so popular is that in contrast, or apparent contrast I should say with other forms of Buddhism, it stands as a kind of easy way, as distinct from a difficult way. In Japanese technical terms the two types of Buddhism are respectively called Jiriki and Tariki. Now Ji means one's own are self and means other and Riki means power and so the schools of Buddhism which call themselves Gili. Are ways of Deliverance which one follows by one's own will one's own power one's own strength. Whereas on the other hand the, type of Buddhism called tariki, is where you rely on the power of another and this other is usually speaking. If I may put it in somewhat mythological terms. A great supra-mundane Buddha. Known as M E Tara in Japanese as Amidha. And the story goes that in incalculable ages in the most distant past this great Buddha made a vow. That he would not enter into the state of complete Buddhahood. Until. Any human being upon the face of the earth who pronounced his name in phase would after his death be reborn in the Western paradise of which we target presides.

And find Larry in. Far greater ease of spiritual development of awakening of the coming of border than is to be found on the face of this difficult earth.

And all this of course to rise from the ancient India Indian idea that the present the park of the world's unfoldment is the darkest of dark ages, called the Kali Yuga. And in the Kali Yuga, or the Mapol is scholars it is peculiar only difficult. To advance towards any kind of spiritual development because it's an age of decadence the end of which will witness the total destruction of the world prior to its remaining manifestation and some future time. And therefore, the story goes on to say that this great Buddha, did, in course of time, attain to complete put up with. Signifying fact that his vow is fulfilled and that any. One who simply repeats the formula Namita higher in Sanskrit or in Japanese now. Which is roughly translatable in English as the name of Amitabha Buddha. Or Namu who is used in the formula is used in Sanskrit or Japanese somewhat as the French say Nandan Nandan are they just same name. Meaning hail I suppose in English we have no real equivalent of it.

And the idea is that anybody who repeats the name of the Buddha Amitabha in perfect faith. Will without any other effort, any other kind of spiritual endeavor on his own part. However evil however it prayed he may be. He will be reborn after death in this spiritual state in which the task of becoming a Buddha is rendered so easy as to be as we should say in perfect cinch. And of course all commentators on Buddhism say Well this of course is how religions degenerate. They become popular, pie-in-the-sky selling organizations. Where absolutely nothing is required of the faithful except an occasional contribution and the easier you make it in contrast to the other sects which make it more difficult for more people of luck to your following out of the contributions will be and it all ends up with the pressure we all well all you have to do is make the thing revalue don't even have to think about it and incalculable supernatural merits all start up on your behalf.

But it's very dangerous to jump to conclusions of the sky about this type of. Religious or spiritual manifestation, because in practice the Shin school of Buddhism has had some of the most remarkable adherents. And produces a

type of personality which is known in Japan as a Miokonen. Literally translated Miokonen means a wonderful and fine man. That's just a literal translation which doesn't at all convey the sense of this kind of personality of them are common. But the Miokonen A man likes in run him self cool found in the shins school of brothers and in Japan is a man who has in a way, understood the profounder meaning of the doctrine of the school. And perhaps before I talk about the personal characteristics of the Miokonen. I should try and indicate. What may underlie what may be the deeper meaning, of this seemingly, decadent highly popular and easy form of Buddhism.

Perhaps the best way to do this is by means of the critique, which this particular school uses against those who follow the other way will follow the way of Jiriki or self power. The followers of the sions coom would say, that a person who attempts to make spiritual progress by his own efforts is betting against the worst possible obstacle to any progress at all. And that is that in thinking that he can do it himself he is like a person trying to lift himself up by his own bootstraps Or to put it in another way, he suffers from the pride of imagining that his own will, his own energy is sufficient to change himself. After all, if he needs changing at all, it is precisely the character in the motivation of his own will and his own energy that needs changing. And how is this change going to be achieved by that very will win so stands in need of change. To put it in the more usual language of the school of thought, they say that the average human being is so weighted down by karma. That is if we put it into more modern terminology we would say, he is so fundamentally conditioned by his upbringing, by his social environment, by the temptations of the world, the flesh and the devil, there's really nothing he couldn't do to make himself any better and everything that he does do is simply a manifestation of the same conditioning masquerading like a wolf in sheep's clothing. Therefore, if the human being cannot transform himself. If used to be transformed at all, he must rely on some power greater than his own.

Now of course, this other power may be represented, figuratively speaking, like we represent God in the Christian tradition as a spiritual entity off force or intelligence quite out of them and apart from man or it may be represented on the other hand as other than us in just the same way look at

the functioning of our own bodies the beating of the heart of the operation of the lungs goes on quite independently of the conscious will and his other in that sense although in another sense those unconscious and automatic or spontaneous functioning of our organism could be understood as Ma fundamentally and truly ourselves than the things that go on in our other superficial consciousness and if you interpret it in that latter way, the idea of how to keep our reliance on the power of another is really a reliance on something deeper in yourself than yourself is consciousness, and that I think is the sense in which the profound the followers of the school of Buddhistic thought to understand doctrine. So the Miokone, As I said literally the wonderful fine fellow, is the kind of personality which this doctrine in Genesis Now what is he he's the kind of person, who has realized through and through the fallibility of his own humanity is the kind of person who knows himself far away who has a rather wry and humorous view of his own own, shall we say his own high motivations and ideals. He knows himself thoroughly for the rascal that he is and doesn't pretend to be anything.

And this. If that were all the word to it is a very likable former fellow from my point of view. I always feel uncomfortable with people who don't have this realization of their own inherent rascality the people at pretensions to holiness and righteousness, who are so deceived as not to know that in their heart of hearts they are after all rapacious and selfish human beings. But the Miokonen makes no bones about this. He knows that's what he is and he knows that by the exercise of his own will and his own intention and his own conscious effort, he can't be anything else. And so there is in him a kind of fundamental honesty and sincerity from the start.

And, what he goes on to be beyond this is something a little different. Because a Miokonen is called a marvelous fine fellow, because somehow or other he does seem to transcend the ordinary kind of human rascality to become. A truly unselfish. A truly human being loving others, understanding others, sympathizing with others, a wonderful compassionate man. Because he has been unable to love himself, to accept himself in the profoundest possible way. For if you translate it into more modern and less symbolic language this idea. That by the mere repetition of a formula, by the mere act of faith in the power, a transcendent Divine Being, one is able

to be saved or made a Buddha or perfected just as you are by an act of magic which lifts you up and transfers you to another realm.

If you were to translate that as I said, into a more contemporary way of talking. It would be to say something like this. That the intent of the symbology is to say that the condition of growing, psychologically and spiritually, is to let yourself and alone, and not to fight against what you are. The more you try to make yourself great. To make yourself unselfish, to make yourself loving, you are simply tying yourself psychically into a knot, a kind of paralyzed state, which makes it impossible for you to be anything except as we might say all balled up. But if on the other hand, you let go of yourself and do not try to change yourself, you relieve yourself from this inattention, you as it were, unblock the conduits of psychic energy within yourself by not straining on and are therefore enabled to grow naturally like a tree or a plant. And this is exactly the attitude of the Miokonon.

I think that one of the most fascinating of these characters as one who as a matter of fact did not actually belong to the Shin school of Buddhism. Although he as in many ways entire. The same spirit because of room there is not so much difference between this profound understanding of the Shin school and other types of Buddhism such as Zen. Zen is ordinarily understood to represent the extreme of the jiriki way, of fighting along by one's own strength. But the intent of the jiriki emphasis of Zen, the self-powered, the willful, driving sense is something like this. To exert one's will to the utmost in order to realize its futility to make the most desperate attempts to change one's motivation and once conditioning in order to discover that in the last analysis it can't be done and it is this and that it is merely the futile struggle to lift yourself up by your own bootstraps.

And so, as a result of this, the jiriki form but as I'm producing very often the same type of personality as the Tariki. And one of the most marvelous examples of the Spirit is a monk or I'd rather call him a hermit and poet by the name of Riokan, who lived between seventeen fifty eight and eight hundred thirty one. A man who is extraordinary in all the annals of sainthood and sanctity. For the reason that everybody loved him I don't think he had any enemies at all, and this is really a very remarkable achievement. After all, it's so easy to be so holy that you are a challenge to

the world, and everybody feels uncomfortable in your presence feels an accused by your sanctity and given a bad conscience and result the result of that you get loathed, you make all sorts of enemies and finally you get crucified.

But it's really a very remarkable achievement indeed to be all that and lovable and top. To be without enemies, the friend of everybody, and yet. Involving absolutely no compromise with one's integrity and honesty. Such a man was Riokan, really marvelous. And many, many stories are told about him and I think these anecdotes about him describe his personality more delightful than anything I could say by way of a character analysis or comment in that fashion. First of all it was to be understood that the Miokonen, or the type of person like real can is one who has truly become again as a child. He's not seen a whole he's not in second childhood in that sense but a person who is really full of a genuine wonderful life. Who has some accepted himself some let go of him self is so you're not pretending to be anything gives himself, no airs and graces that he can relax and be perfectly natural and so the story is told. That one day in Riokan was going along baking is food and he met friend invited him to spend the night at his home. Well, in the room where he stayed it was a picture of a tiger egging on the wall. And real can look for a long time in the picture and was so intrigued by it that after a while he came to feel that he himself was a tiger and he fell to the floor and all running around on all fours he growled at the tiger in the picture he said and the Tiger seemed to look at him and answer him you know can again shout. And the Tiger seemed to answer and appeared to be going to approach him. And Riokan getting a great deal of fun out of this game repeated it many times. But just then a maid of the house. Appeared. And was quite astonished when she saw the priest on the spot. For a moment she didn't understand what had happened and was very frightened and then she recognised him oh Rio comes up so it is you who frighten me so much what are you doing there. Startled by I have voice real can't stop his game of imitation and shamefacedly spoke to her on his knees. Did you see what I was doing he asked you did oh that annoys me very much about good mate please keep it a secret otherwise I would not to do will know what to do for people will think I'm crazy.

And then there's another story which tells of. A certain party who came to the little hermitage where he lived in the mountains. Bringing a letter from one of his friends. And just at that moment real count was absorbed. And trying to juggle his big bowl on the top of the pole. When the messenger called out and delivered his letter real can stop his juggling for a brief interval glanced over the letter and wrote his answer. The Baron made his departure. And Riokan resumed his play his bone time after time slipped down to the floor but again and again and set it up on top of the pole many hundred times that he struggled to accomplish this feat. And after some time the messenger returned Riokan was so engrossed in his play that he felt annoyed at this interruption and did not pay any attention to his visitor. While the boy waited for some time and finally called out in a large voice real grandson I look here what does this answer mean my master is angry with me and has ordered me to ask you to take back the letter you wrote before and give me your real answer please do. Riokan had pity on the intruder and opened the letter he had written only a short time before and what was his surprise when he read. The bone turns round round. He broke into laughter, Oh dear me excuse me I made a mistake exclaimed. He then wrote another letter. But as his mind was filled with thoughts of the bowl and into play the answer didn't come easily. The great delight of real was playing with children in the village when he went down to make his food. And one fine autumn day when he was going quietly through the village he was suddenly disturbed by the sound of a voice. Apparently coming from a persistent tree. And turning his eyes to the place where the sound came from he's discovered a boy clinging in great fright to the top most branches and crying for help. Oh wait a moment my boy he said I'll help you down and then I'll pick some of the fruit for him. Riokan brought the boy safely to the ground and then began to pick the coveted fruit. He plucked one percent when Mom was about to hand it to the child when he decided that it would do well to taste it first, in order to give away the very best the first persimmon was therefore thrust into his own mouth. How sweet he exclaimed he picked another and again stuffed it into his mouth. Good and again and again Simmons found their way into his mouth accompanied by the exclamation. Sweet our sweet. Meanwhile, the boy was waiting with open mouth at the foot of the tree, growing more desperate every moment. Riokan, last in rapture over the percent had entirely forgotten. Only when the boy shouted out in. Riokan to him selfe. Oh dear me he said Pardon me

do forgive me I shall pick the best for you now the very best of all and as many as you like. Saying this Riokan dropped persimmons to the boy one by one all red and very sweet.

And then there was once someone told him that if you picked up money on the road it made you feel very happy. So, one day as he was traveling back to his home it if you thought he would try it and see what it was like. Accordingly, took some of the kindness which he had begged from the villagers and let them drop to the ground he didn't pick them up one by one but though he did this many times, he didn't experience any particular feeling of driveway I can't understand it he said They tell me that it is pleasant. Surely they wouldn't deceive me. He tried it again and again but always without and it was out. In the process of dropping and picking up his money he gradually lost all you had in the grass kind of a long time he had to search for the money, but he found it at last, and then when the crowd joy he exclaimed. Ah understand now to find money is certainly a delight. And once, when he was invited to stay in the home of some friends, they had to go out. And they asked him to watch the house and he got kind of sleepy. Cap was going to sleep on. Suddenly heard a funny noise, he thought it was a cat but there was the cannot sleep on his lap What was that Sam. You still need to the paper screen which separated the verandah from his run and peeped through it with childish curiosity. And there in his room, he saw a shabbily dressed man searching in a chest of drawers and taking clothes out of it. All he's a sneak thief thought really count. Of course Riokan didn't want a thief to take clothes from his friend's house. So he made up his mind to frighten the robber and drive him away. And therefore crash into the room and stand behind the thief. And the robber, utterly ignorant of this, went out of the WRONG with a packet of clothes and hastened into another room to look for Mott and Riokan follow stealth any stepping always about ten feet behind him and when the robber turned to the left he also quickly went to the left and if the thief turned of the right real can do the same always just behind him another slight turn brought the robber almost in Riokan's direction but the priest was so quick that the thief didn't see him. It seemed a real count as if you were playing a game plan and, so absorbed had he become in the game, and before he knew it the thief had slipped away with a stolen package increased suddenly came to himself and realized what a serious mistake you made.

But his concern was not so much over the last thing his heart was full of pity for the feet. As he thought of his shabby clothes sad face. Late in the evening when the family returned they are full of dismay and they saw what happened but you can't just. Sat in silence and smile as usual. And among his written effects was found as curious little document. It just said, favorite things, cotton cap, how paper than money ball and marbles. Necessities: bamboo hat, gloves, stick, well. Things for travel some clothes and oil cake a bowl in the back don't forget to read this before stuff. Otherwise you will suffer from want.

He liked to smoke too. He was very fond of tobacco. And he always had a shabby old skin tobacco pouch which he kept his tobacco in very often it was empty and he would go out on the streets with his tobacco pouch tied at the end of a long stream down his back. People knew at once what he meant when they saw the power dangling behind him he would hasten to finish the tobacco. Among other things Riokan very famous as it can be great for years and writing was great it promised. And it was a bar to who used to go to be a. Very much wanted a specimen of his writing to hang on a crack in one of the hanging scroll as was not real congress wouldn't get that. Well one day. In the middle of shaving his head in the bar stopped and left him and said Now I want to go on finish saving unless you give me the piece of writing I want so immediately real can write it for him. And then the barber finish shaving him the mother couldn't read and some days later when somebody who could read came into his shop said Why this inscription is incomplete there's a well missing so next time we'll count came by. The Bible said but you didn't write the full inscription or no I know he said I didn't write the full inscription because you didn't shave all of my hand the missing work you'll find I've written the same inscription to put the missing word in twice at the home of an old widow who always gives me extra bean curd when I needed. Such, by anecdotes, is the temper of a man who is profoundly at home in the world. And difficult to think about, difficult to talk about. Because, to praise such a character is to tempt one, to imitate him. And one can only imitate him by not doing so at all, but by being just completely oneself.

Gateless Gate

When I originally planned [this] series of talks, I had not intended to include what to me is one of the most remarkable books in the world. And the reason I hadn't originally intended to include it in the series, is that, to the average person who is not acquainted with these matters it's a book of extraordinary difficulty, despite the fact that from another point of view, it's a very simple book. But in any rate, I thought I'd have a shot at it. This book is called in its Chinese title Wu Min Guan. And literally translated that means no-gate barrier. Or you might call it the gateless gate, or the gate which is no gate. The book is representative of an extremely important school of Buddhism known as a Zen in Japanese and as Chan in Chinese. And this particular school of Buddhism has been one of the most potent influences. In the history of Far Eastern culture, in the shaping of its arts and such a wide range of Arts, going from painting and calligraphy at one extreme to the art of Jujutsu at the other. Including in between, landscape architecture ordinary house architecture ceramics archery, fencing, all kinds of things as well as daily life itself. And because of them has been of such great influence in forming the cultures of the Far East is one of the most important types of oriental philosophy for us to understand.

But when one comes to the literature of Zen, the beginner is faced with a very strange problem. And the problem is that the great majority of this literature consists of anecdotes some of which are technically called Mondo or question and answer. And these stories are somewhat like jokes. Because a joke strikes you as funny only if you get the punchline see the point and laugh at once. If somebody has to draw a diagram and explain the joke to you and tell you just why it's funny, well, it falls flat. And it's the same with these stories. There is a meaning to them, but this meaning is not a symbolic meaning as I will try and explain in a little while you don't really have to be in the know about a kind of subtle and obscure system of symbols in order to be able to interpret them. The strange thing about these stories is that the point which they convey is so obvious, that it's difficult to see. And the problem about explaining a book of this kind is that the more I might succeed in giving you what would seem to you like a convincing and satisfactory explanation, the more I should be fooling you why would that be well for exactly the same reason. As if I were explaining jokes. If I explain a joke and draw a diagram of it I cheat you out of the laugh. You will never have a belly laugh over it, you will at most have a rather polite

throaty laugh but if I do not explain the point of a joke to you, even if you do not see the point immediately it is told some time later while you're ruminating over it the point may suddenly occurred to you and then you may get the benefit of laughter. However the point of these then stories is not so much to make you laugh. But to create a state of mind which in some respects is rather similar to laughter in that it is a state of profound feeling it's not just a state of understanding words. And that profound feeling is called in the technical language of zen Buddhism, Satori. And Satori is more literally, a sudden awakening. I think when I was talking about the Diamond Sutra. I tried to give some explanation of what is meant in Buddhism by awakening. I'm not going to try and give a further definition of what it means, except by agency of the stories themselves and some comments about them. But awakening, is the goal of all Buddhist endeavor. It is a kind of psychotherapy a kind of transformation of the consciousness of the everyday person which is held to be a sleep, into a state of awakening, in which you might say he is so clearly conscious of reality. That he is never fooled anymore by the illusions of life.

Before I turn to the actual story is contained in our book *The no-gate barrier*, I think I should say something by way of introduction about Zen itself because then it is really an extraordinary phenomena in the history of philosophy and religion. The reason why Zen is so peculiar is that it has to begin with no doctrines that can be stated in words nothing that it requires anybody to believe. It has no system of formulated philosophy. In fact, it doesn't really have anything to say at all. What is remarkable about zen is that it endeavors to convey its message. The realisation which constitutes awakening in Buddhism, without the intermediary of words and ideas. There are four statements which sum up the character of Zen Buddhism and they are as follows. A direct transmission of awakening outside the Scriptures. No dependence on words and letters. Direct pointing. And finally, seeing into one's own nature and becoming a Buddha, which is to say, an awakened one. I particularly want to concentrate on what is meant for the moment by direct pointing, because this is the technique in which Zen excels. Zen feels that all that human beings are seeking all that they really fundamentally desire. Whether it be complete contentment of the heart, understanding why this universe exists and what our place in it is all this understanding is not something obscure and far off, but something

completely obvious. And lying open for us to anybody who cares to look at it in this immediate moment which we are living now it does as if to say. The whole secret of life everything that you could possibly desire is yours at this moment. And if you cannot lay hold on it now you will never be able to. The difficulty is that it's very hard to convince people of this by talking about it because all talk, all systems of ideas, are in relation to reality itself somewhat like a menu in relation to a dinner. And those who try to get comfort to get wisdom out of books or by believing in various systems of ideas and philosophies. Such people are really devouring the menu instead of eating the dinner.

Now how then is one to divert people's attention from the main you to the dinner itself. There's only one way and that is to point directly at the dinner to stop talking about it to stop writing about it and to point out it directly. And this is what zen does and most of these stories from the no gate barrier Wu Min Guan, the examples of direct pointing. According to legend the Zen school of Buddhism was introduced into China in about the five hundred twenty seven A.D.. By a sage. From India whose name was Bodhi Dharma. And Bodhidharma is always represented in the art of the Far East as a fierce gentleman with a bushy beard and staring bright eyes. In Japan, at the present time children's toys are made to represent body Dharma their little fellows rather like the American schmoo. Same sort of shape, and their weighted inside you know they're legless figures and they're weighted inside so that you can't knock them over they're always come up right again. And always, there is the fierce stare in the eyes of the bushy beard on the chin and of course there is some reference to body dharmas secret to the teaching which he brought, to the message of Zen in the fact that you can't not was little fella over you can push it in this way you could push him that, but he always bobs up again. The first story I'm going to read from the Wu Min Guan, which incidentally was compiled by a teacher of the Zen school who lived in China between eleven hundred eighty three and twelve sixty. The first story I'm going to read you is the story of the encounter between Bodhi Dharma and his first disciple. Whose name was Aka. Bodhidharma was sitting facing the wall. His future successor a car stands in the snow. And presents his severed arm to Bodhidharma I should explain in parenthesis that. Bodhidharma had very much discouraged from becoming his disciple and this is always the way with Oriental philosophical and

spiritual teachers they don't look for disciples. And the reason why. Bodhi Dharma wasn't looking for disciples was his own fundamental feeling that he had nothing to teach the truth of Buddhism was so completely obvious that anyone could see it if he looked and to talk about it and try and teach it was as they say in Zen, only to put legs on a snake. You know, a snake walks very well without legs and if you stuck some on it would only embarrass him. And so he had said repeatedly I have nothing to teach go away. But a guy was so convinced that Bodhidharma had some secret which he could convey to him that at last as a token of sincerity he cut off one of his arms while standing outside the teacher's heart in the freezing snow and presented it to the teacher crying. My mind is not pacified. Master, pacify my mind. Bodhi Dharma says, If you bring me that mind, I will pacify it for you. I said. When I search for my mind, I cannot hold it. Bodhi Dharma said then your mind is pacified already. And it is said that at this moment a car had a sudden insight into the whole mystery of life, the problem of peace of mind and the essential meaning of Buddhism itself. To each one of these stories, the editor of the book has added a comment and a poem, and I'm going to read the comment which he's put here. 'That broken toothed Hindu Bodhidharma came thousands of miles over the sea from India to China as if he had something wonderful. He is like raising waves without wind. After he remained years in China he had only one disciple and that one lot. Does Armin was deformed alas ever since he has had brainless disciples.' And the poem. Why did Bodhi Dharma come to China. For years monks have discussed this. All the troubles that have followed since came from that teacher and disciple. It's a characteristic convention of zen literature that the masters of the school poke fun at one another. Because insofar as they seem to be masters they all realize that calling themselves masters is kind of a joke because a mass there is after all one who has something to teach and in Zen, there is nothing to teach. The more one teaches them all one tries to explain it the more obscure it becomes just like the more one explains the joke or less funny it becomes. Going back to the story about bodhiDharma and Aka, Aka is expressing a very ordinary, simple human problem. He says, I have no peace of mind what does he mean by mind. We might say so we might say ego or self. I feel that I am happy I need peace.

And so BodhiDharma says very naturally, bring up this soul, this mind of yours and I'll pass if I had. But Aka says you know when I try to find myself. I can't. I look and look. But then I realize that I'm looking for the one who is looking and I can never lay hold on it. But body Dharma said there your mind is pacified already. I feel very diffident, really, about making any comment was story of that kind, but just in the nature of a little bit of a hint. We are all very convinced indeed that we exist as a kind of self or ego. And our selfishness is one of our major problems. It would, wouldn't it, be rather fascinating, to find that when we look for ourselves we are not really there. As if where we expected to find ourselves in the center of all our experience we found only a hole, an empty space. And then the problem of myself, my happiness my peace of mind. Would have disappeared. There is no one whom one has to pacify whom one has to make happy. You're not actually there. But of course one can't discover that just by hearing about it you have to look and see that's why one of the fundamental questions in oriental philosophy is the simple question Who are you? Look and try to find out who it is that is trying to find out who it is that is trying to find out. This is after all. A parable of what everybody is doing who is engaged in what we in the west call self-seeking. And this is really a stupid as somebody sitting down in a chair and bashing him gnashing away trying to bite his own teeth. Well then here's another story from the no gate area. There was once a teacher called Tozan. And one day when he was weighing some flax, a student came to him and said, What is Buddha? This question can mean, What is reality? Or what is it to be awakened? Tozan answered, This flax weighs three pounds. Period. Then I read your comment. Old tows arms then there's like a clam. The minute the shell opens you see the hole inside. However I want to ask youm Do you see the real Tozan? And then the poem. Three pounds of flax in front of your nose close enough and the mind is still closer. Whoever talks about affirmation and negation lives in the right and wrong region.

Now you must not suppose that there is some symbolism in saying this flax weighs three pounds. Or why I know some commentators have tried to explain that in Buddhism there are three precious jewels the Buddha himself the dharma or his doctrine and the Sangha, or his ordained followers. But the three pounds of flax don't refer to the three jewels turns on answered. This flax weighs three pounds, just as you might answer a

very simple question about where are you going to say when I'm going in town to buy groceries. Or, what kind of a day was it yesterday? Where you live only to say it was raining a good deal of the time. And this flax weighs three pounds there's an answer just like that but it seems doesn't that a strange answer to give to a question like What is reality or what is it to be fully awakened? Well, Zen teachers say that they derived this tradition of answering questions in that direct simple way from the Buddha himself, because our book contains a story. That this was the way in which the border passed on. The secret of his own teaching to his principal disciple whose name was Mahaghashaba.

And this is the story: When the Buddha was in the greed Rockwood the mountain he turned a flower in his fingers and held it before his lessons. Everyone was silent. Only Mahaghashaba smiled that this revelation although he tried to control the lines of his face. The Buddha said. I have the eye of the true teaching. The heart of Nirvana, of awakening, the true aspect of the formless. The ineffable stride of the doctrine. It is not expressed by words, but especially transmitted beyond teaching. This teaching I now give to my how to shop. And then, the very amusing commentary of Wuman, Golden-faced Buddha, thought he could cheat anyone. He made the good listeners as bad and so dog meat under the sign of mutton. And he himself thought it was wonderful whatever the audience had laughed together. How could he have transmitted the teaching? And again if market because shot my shop I had not smiled How could he have transmitted the teaching. If he says that realisation can be transmitted he is like a city slicker that cheats the country dub. And if he says it cannot be transmitted Why does he approve of Mahaghashaba.

And then the poem: At the turning of a flower his disguise was exposed no one in heaven and can surpass my hookah shoppers wrinkled face. There were all those disciples gathered around the Buddha expecting from him the usual daily words of wisdom and instead of that he said nothing. He just picked up a flower and held it in his hand. And this is the same sort of answer. That tones on gave when he was asked what is reality he just said. This lacks weighs three pounds. An ordinary statement just as holding up a flower is an ordinary action. When Zen teaches began to answer questions about reality in this way, they had their imitators. Those who thought that

they had got hold of something, that [it] was you know a sort of new cultish fad in the way of religion and they went around imitating these kind of antics in order to seem wise and to collect followers but this is what happened to a person and try that sort of thing is this. Dorie called Gutei. Gutei raised his finger whenever he was asked a question about zen. A boy attendant began to imitate him in this way. When anyone asked the boy what his master had preached about, the boy would raise his finger. Gutei heard about the boy's Mr. He seized him. And asked him the question. What is the fundamental principle of Buddhism the boy raised his finger and at once Gutei cut it off. The boy cried out, and ran away. But Gutei called out and stopped him. When the boy turned his head to good a. Gutei raised up his own finger. In that instant, the boy was enlightened. When Gutei was about to pass from as well he gathered his monks around him. I attained my fingers and he said from my teacher ten real and in my whole life I could not exhaust it. And he passed away.

So the secret of the thing is not just in being able to do some strange antics in answer to questions, and the fellow who didn't really understand but imitated his understanding got into very serious trouble. But despite of his get into trouble, he realized the thing in the end. Here is a story in which perhaps the point of this great a thing begins to come a little clearer. And it's called The Story of tipping over the pitcher. Heakoto send him out to open a new ministry. He told his pupils that whoever answered a question most ably would be appointed. Placing a water pitcher on the ground he asked. Who can say what this is without calling its name? The chief monk said no one can call it a wooden shoe. But Isan, the cooking monk tipped over the pitcher with his foot and went out. Jaco just smiled and said the chief monk loses. And Isan became the master of the new ministry. Woman comments. Eason was brave enough but he could not escape Iago Joe's trick. After all, he gave up a light job and took a heavy one why can't you see he took off his comfortable hat and placed himself in iron stocks. If I talk all the time, and never listen to what others have to say I shall lose touch with my fellow man. In the same way, if I think all the time which is in a way talking to myself inwardly I shall lose touch with the reality with which words are about, which they're intended to symbolize. It's the fundamental inside of zen that by an excess of thinking men have lost touch with the real world in which they live. The solution to this problem is to be

silent in one's mind and to look again at the real world not thinking but seeing it directly this can't be talked about. If I want you to listen to music any advice to do so will drown out the music the directness way is to play music itself. In other words, he had seen that the reality of the picture was not the word or the idea 'picture', but was something non-verbal. And by this action demonstrated that this was his understanding you cannot put what it is into words. And this indeed is a central point of zen and of Buddhist understanding in general. That reality is beyond words. And that one must not confuse the world of things as we think about them and talk about them and name them, with the world as it actually is.

The first story I read was a case in point. Because in the world of ideas and words and conceptions and inherited social notions every one of us is perfectly convinced that he is a self, an ego. But when we step out of that world of conventional ideas into the clear daylight of reality and with wide open eyes look for ourselves, what do we find?

On GK Chesterton

I want you to have in mind an enormously fat man wearing a black cloak and a rather large, wide-brimmed hat, with pince-nez secured to his nose, and prevented from destruction by a large, black, long ribbon fastened around his neck, who speaks—as fat men do—with a certain luxurious voice rather like Charles Laughton, only with a slightly grieved tone in everything he says. What I would call a humorously grieved tone. And this is G. K. Chesterton: a person whom—I discover—has had an enormous influence on my life. Because when I was a late adolescent—and when I was, for a while, a priest in the episcopal church—I read this man's works very carefully and I have, by osmosis, imbibed an enormous amount of wisdom from him. The funny thing is: not so much in terms of specific ideas as in basic attitude to life. Because this is a man who, above all virtues, had—I think—what is one of the very greatest virtues, which we don't usually find catalogued in lists of virtues: he had a sense of wonder.

He knew a truth that was once enunciated by a kind of guru-type who was a friend of mine many years ago, who said that Gnosis—which means... I suppose you'd best call it 'transcendental knowledge'—Gnosis is to be

surprised at everything. Because, you see, if you carry out technology to its final fulfillment, you have technological means of supplying you with every need or wish that you could imagine. So that you have—instead of just the plain little telephone with its dial on it—you have a somewhat more elaborate machine on which you can dial for anything you need at any time and it'll be supplied instantly. Imagine yourself in that omnipotent position!

And what you will wish for in that final, ultimate push-button world will be a button labeled Surprise! You won't know what's going to come when you dial that one. And Chesterton's fundamental attitude as a poet, as a theologian, was that even God needs a surprise and, of course, for that very reason endowed angels and men with the mystery of free will: so that they would do things that would be surprising and that could not be foretold.

This is why Calvinists are so dreary: that they believe that everything is predestined. And that's why, of course, the Episcopal church is always more interesting than the Presbyterian church, in that they're not Calvinists. There's something always rather depressing about Calvinists, although there are many interesting things about them that I won't go into.

But Chesterton's idea was that the universe is so arranged that it is, basically, the Lord's own way of surprising himself. Because that's what you would do if you were God, if you really think it through. A lot of people never think this through. They think about... I remember a story about a conversation at a dinner party where all—it was in England—and all the people were discussing what they thought was going to happen after death. Whether they would simply be extinguished, or whether they'd be reincarnated, or whatever kind of thing. And present at the dinner there was a very respectable country squire who was on the vestry of the local church. Very pious. And finally the hostess said to him, Sir Roger, you haven't said anything in the conversation this evening! What do you think is going to happen to you when you die? He said, I'm perfectly sure that I shall go to heaven and enjoy everlasting bliss, but I wish you wouldn't raise such a depressing subject.

So, you see, people just don't think it through. It's very fascinating to ask people, deeply, about their theological ideas: what they really do think God is, and what heaven would be like. And not only what it would be like as

based on the symbolism of the Bible, but what sort of a heaven they would really want to go to. I mean, do you want to be stuck with the rest of your family forever? The saying: God gives us our relations, but let us thank him we can choose our friends. At what age would you like your resurrected body to be? There are all sorts of fascinating questions of this kind which bring out the great, marvelous problem of what we would really like to happen. And when we follow that through, and through, and through, and through, we must admit in the end that we don't want a situation in which everything is completely controlled. In other words, if everything is rationalized, if everything is perfectly logical and clear, and it all works, and there's no possibility of anybody making a mistake, and we know exactly what's going to happen forever and ever and ever, we'd be bored to death. Nobody wants that kind of heaven. So what kind of heaven would you like?

Supposing, for example, you had the privilege—the power—to dream any dream you wanted every night and have it real vivid. And, of course, you would be able to dream any amount of clock-time in one night that you desired. You would be able to, say, have a hundred years of experience in one night. And when you think that through, what dreams would you dream? It's almost like the question: if you were going to have half an hour's interview with God, and you had the privilege of asking one question, what question would you ask? And you've got a little while to think that one over, see, before you go in for the interview. So, then, the same thing is: what would you dream?

You would dream, of course—at first, I suppose—all possible fulfillments of wishes. Whatever your wishes were, whatever your desires were, you would fulfill them all. And when you've done that for about a month of nights—of a hundred years long, each night of dreams—you would say, Well, let's vary things a bit. Let's let things get out of control. Let's have an adventure. And then, you know, you would rescue a princess from a dragon or something of that kind. And then you would arrange it so that you would forget that you were dreaming, and so the thing would seem as real as real could be. And you would dare yourself like kids dare themselves to do all sorts of dangerous exploits. And finally, you would dare yourself to experience awful situations because you knew it would be wonderful when you woke up; because the contrast would be so fascinating. And finally, in

the course of your dreaming, you would dream a dream in which you were sitting in Campbell Hall at Christ's Church in Sausalito listening to me give a lecture—with all your personal lives, and your problems, and whatever it is that's going on, you see? Because that would be the nature of surprise.

Now, in this—when you fully realize that to be surprised at everything is high wisdom you get a new point of view towards the world which gives you almost what could be called a child's vision of life. When Jesus said that unless you be converted and become as a child you cannot enter into the kingdom of heaven. This is the thing that Chesterton understood in a very profound way because, to a child, the world is entirely new and, therefore, all of it is extraordinary. And I hope most of you can remember how you saw things when you were about two years old: as the whole world being quite weird. And when you get used to things... you see a tree and you say, Oh, well, that's a tree. We're used to trees, we know what trees are. BUt if you can go back to your childhood and remember how it was when you first looked at a tree and you saw the Earth itself reaching up into the sky, extending itself in many branches and waving all these little flags at heaven. Or when you looked at the sun, as a child, and you stared at the sun: it was marvelous. And the sun turned blue, and there was a feeling about everything of being essentially magical.

So there is a most extraordinary passage which occurs in one of the rarer books of Chesterton, called *The Coloured Lands*, where he makes this extraordinary remark:

It is one thing to describe an interview with a gorgon or a griffin, a creature who does not exist. It is another thing to discover that the rhinoceros does exist, and then take pleasure in the fact that he looks as if he doesn't.

And this is the key to this man's wisdom: that he could see all kinds of everyday things and events as if they were completely improbable and magical, and that he could describe the world as an extremely improbable object. This great globe of rock floating in space around a vast fire, covered with green hair that ordinary people call grass, and containing all the extraordinarily odd objects on it. And when he thought about this he realized two things that are not ordinarily realized by religious people. And the two things are this.

He realized that the world created by God is a form of nonsense and that one of the most important features of the divine mind is humor. In one of his essays he says, So often, when I've written the word 'cosmic,' the printer makes a misprint and prints it 'comic.' But he said there's a certain unconscious wisdom in that. The cosmic is the comic. Dante wrote the Divine Comedy, an account of Earth, heaven, purgatory, and hell. The divine comedy. And one finds, you see, in ordinary people's religious attitudes there is a lack of both these things; of nonsense and of humor.

When I was a boy I was brought up in the church of England. I went to school at The King's School, Canterbury. And, of course, we attended innumerable services in that great cathedral. And one of the cardinal sins which one could commit was to laugh in church. And that is, of course, because—the same reason judges don't like laughter in court: that laughter is threatening to tyrants. And if you can see God in the image of a tyrant, a monarch, who rules by violence—whatever kind of violence it may be; military violence, moral violence, any kind of violence—all tyrants are afraid. And they sit in courtrooms with their backs to the wall, surrounded by either side by their guards. And everybody who comes in, of course, has to fall flat on their faces because in that position it's more difficult to attack. And so, when a marine sergeant on parade salutes the flag he has a very serious expression in his eyes. That's not a time for laughter.

And therefore, we have associated the word 'solemn'—as when we celebrate, in the catholic church, solemn high mass—solemn... solemn means 'serious.' And one of the great things—one of the fundamental insights that is underlying all Chesterton's work—is that the attitude of heaven is not serious. There's a famous passage in his book Orthodoxy where he says:

Things like stones are subject to gravity. They are heavy, they are grave, they are serious. But in all things spiritual there is lightness and, therefore, a kind of frivolity. The angels fly because they take themselves lightly. And if that must be true of the angels, how much more true of the Lord of the angels?

I have said in my funny way that there are four fundamental philosophical questions that human beings have argued about as far back as we can

remember. The first question is: Who started it? The second question is: Are we going to make it? The third question is: Where are we going to put it? And the fourth question is: Who's going to clean up? But all those things suggest a fifth question, which is: Is it serious? Like when someone's sick and says to the doctor, Is it serious? Are you serious? But he would say that's quite the wrong question to ask. Not are you serious, because that would mean are you grave, are you heavy, are you ponderous, are you solemn? And in all these senses he would equate that with a kind of lack of spirituality. And it's much better to ask people not are you serious but are you sincere? In other words, are you with it, as we say in more current American slang. So, from his view the world is fundamentally not serious; it is sincere. And beyond that—to go on to the higher mystery of his insight—the world is basically nonsense. Now, what do we mean by that?

In the Book of Job—which is the most profound book in the Bible so far as I'm concerned—there is raised the problem of the sufferings experienced by those who are just and righteous. And Chesterton has written a great deal on the Book of Job, and without quoting him directly I'm going to summarize what I've learned from him about this book because this is really very important about this whole theme.

The prelude to the Book of Job is in heaven and a conversation ensues between God and one of the angels called Satan, otherwise known as Samael. The word '-el' on the end of a name of an angel—like Gabriel, Rafael, Uriel, and so on—means 'divine being,' 'angel,' 'attendant of the court of heaven.' And the role of Satan in the Old Testament is different from the role of Satan in Christianity. The role of Satan in the Old Testament is: he's the district attorney of heaven; he's the prosecutor. And, as you will see in a court today, it is arranged that the prosecution is always on the left of the judge and the defense is on the right. So at the left hand of God—a situation which is not mentioned in the Creed—there is, of course, the prosecutor. At the right hand of God—for he sitteth at the right hand of the Father—is our only mediator and advocate, Jesus Christ, because he's the council for the defense. And he happens to be the boss' son; puts him in a rather strong position. Because, in the course of time, when you read reports of cases in court and you get very familiar with court procedures, you always start having sympathy with the accused. And, therefore,

antipathy towards the prosecution because the prosecution's always putting people down, who are saying nasty things about people. And the defense is always trying to say nice things about people. So, therefore, there's popular enthusiasm for the defense and popular displeasure for the prosecution. And it was for this reason that the particular angel called Samael, or Satan, was in due course of time turned into the devil; the enemy of all things good. Whereas, actually, the devil in the Book of Job is a loyal servant of the court of heaven. It's just his job to do the prosecution. So he proposes that God try Job. He said, You think you've got a virtuous follower in Job, but he's only virtuous so long as he's prosperous. You see what happens when you visit him with suffering, and then see if he's loyal to you. So God does exactly that and he visits Job with all these plagues. And then the three friends of Job sit around and they try to rationalize why all this is happening. They say, in effect, you must have committed some sort of secret sin, otherwise you wouldn't be suffering.

This is the reasoning of the Book of Deuteronomy: that if you obey the law of God you will prosper. And the Hebrews were eternally puzzled as to why this didn't work out. So the Book of Job highlights this question. And all the advisors of Job—the three men who have this discussion with him while he's covered with sores, and sitting around in some wretched pad with all his property lost and his family in trouble, and so on. And he cannot see any sense in their arguments. And finally, God appears at the end; in the 28—what is it?—28th chapter. And he comes in a whirlwind. And he refutes the advice of all these three friends. Who is this, he says, that darkeneth council with words without knowledge? Now, stand you up like a man and answer like a man! Were you there when I laid the foundations of the Earth? When the morning stars sang together and all the sons of God shouted for joy? And then he goes on to ask Job a series of questions which include such questions as, Why do I send rain on the desert where no man is? Can you catch the leviathan with a hook? Can you bind the influences of the Pleiades and make them work for you? Or Can you loosen the astrological influences of this constellation of Orion? Can you do all this? And what is it all about?

So a series of questions are delivered to Job, none of which have any answer. And the effect of these questions on Job is to solve his problem.

And ordinary interpreters of the Book of Job always say that this isn't really the answer. They say the Book of Job raises the question and doesn't answer the question—it does answer the question! It answers the question by asking the questions, all of which seem to reflect that, in some curious way, the universe doesn't make sense. Why do you send rain on the desert where no man is?

Now, what about that? See, our trouble is that, where we really get into difficulty in life is that we expect everything to make sense. And then we get disappointed. We expect, for example, that time is going to solve our problems, that there's going to come a day in the future when we will be finally satisfied. And so things make sense—we say of something it is sensible, it is satisfactory, it is good, because we feel it has a future, it's going to get somewhere, and we're going to arrive. Our whole education is programmed with the idea that there is a good time coming, when we are going to arrive, we're going to be there. When you're a child, you see, you're not here yet. You're treated as a merely probationary human being. And they get you involved in this system where you go up step by step through the various grades. When you get out of college you go up step by step through the various grades of business, or your profession, or whatever it is. Always with the thought that the thing is ahead of you. See? It's going to make sense. And perhaps the universe doesn't work that way at all. Maybe, instead of that, this world is like music, where the goal of music is certainly not in the future. You don't play a symphony in order to reach the end of the symphony. Because then the best orchestra would be the one that played the fastest. You don't dance in order to arrive at a particular place on the floor. So Chesterton's view of the world is an essentially musical view, a dancing view of the world, in which the object of the creation is not some far-off divine event which is the goal, but the object of the creation is the kind of musicality of it, the very nonsense of it as it unfolds.

And so, when you talk sense your words refer to something else. In other words, if I talk about tables and chairs, these sounds that I'm making—'tables,' 'chairs'—refer to something in the physical world. The sound 'table' is not the table, but it refers to this [Alan knocks on a nearby table]. But then, when we ask What does the world mean? What does the table mean? The word, the noise, 'table' means this: [Alan thumps on the table

again]. Now, does this have a meaning? What is the meaning of life? If we ask the question What is the meaning of life? we are treating life as if it were a set of words, a set of symbols. But it isn't. The real great insight is that these things don't have any meaning.

Now, in ordinary way of talking in the West we would say that's terrible! Something that has no meaning is awful! A meaningless life, you see? We say that about the most dreadful kind of life. But Chesterton is trying to say that the meaningless universe, the nonsense universe, is just great just because it doesn't mean anything. It is because God himself is dancing. He's playing. He has a poem of God as a child and he's playing with a windmill, and the fans of the windmill are the four great winds of heaven. And the balls with which he's playing are the sun and moon. And the whole idea, therefore, then, is that existence itself is a magical play, and it's therefore nonsense in the sense—the special sense of nonsense—that it is something going on which does not refer to anything except itself. When we say 'nonsense' we are saying it for the delight of the words and not for anything that they mean.

'Twas brillig, and the slithy toves

Did gyre and gimble in the wabe:

All mimsy were the borogoves,

And the mome raths outgrabe.

Or better, from Edward Lear, who said of himself—he really drew the portrait of Chesterton:

His body is perfectly spherical,

He weareth a runcible hat.

And so:

There was an old man of Spithead,

Who opened the window, and said,—

“Fil-jomble, fil-jumble, fil-rumble-come-tumble!”

That doubtful old man of Spithead.

Or:

Plumpskin, buffskin, pelican, gee!

We think no bird so happy as we.

Plumpskin, buffskin, pelican jill!

We think so then and we thought so still.

You see? Now, he says that—in this kind of marvelous playing with the voice, and with words—you have something nearer to the nature of reality than you do with statements that make formal sense. Even though this man, Chesterton, was a great believer in reason. And, you know, in the Father Brown stories there is an occasion when Father Brown spies the criminal masquerading as a priest because the man says, Well, we cannot find out God with our reason. Or All the things of divine are beyond reason and we must learn to suspend reason. And at that moment Father Brown knows this man is not a good catholic and not really a priest at all. Because St. Thomas, you see, bases everything in saying there is a consistency between reason and faith. And Chesterton believed in that very strongly. But that didn't prevent him from seeing the deeper mystery that there is a kind of super-reason in unreason. But not just pure unreason, but in something that we recognize as nonsense in the sense that Edward Lear and Lewis Carroll wrote nonsense.

Now, this is an enormously important thing to understand. What is the difference, shall we say, between inspired nonsense and mere bosh? And this is what he's trying to point out. There is a kind of nonsense which we could call 'magical nonsense,' and there's a kind of nonsense, on the other hand, which we should call just 'trivial rubbish.' So it is the nonsense—divine nonsense has this extraordinary humor with it, which he tries to evoke in saying that it is a great thing to look at a rhinoceros or a

hippopotamus, creatures who do exist and look as if they don't. A poem in which he brings this out is called *The Fish*.

Dark the sea was: but I saw him,
One great head with goggle eyes,
Like a diabolic cherub
Flying in those fallen skies.
I have heard the hoarse deniers,
I have known the wordy wars;
I have seen a man, by shouting,
Seek to orphan all the stars.
I have seen a fool half-fashioned
Borrow from the heavens a tongue,
So to curse them more at leisure—
—And I trod him not as dung.
For I saw that finny goblin
Hidden in the abyss untrod;
And I knew there can be laughter
On the secret face of God.
Blow the trumpets, crown the sages,
Bring the age by reason fed!
(He that sitteth in the heavens,

‘He shall laugh’—the prophet said.)

So he sees in a goldfish—you know, those kind of Disney goldfishes which have all sorts of tails and fins and complications, with their big goggle eyes—what on Earth are they doing? You ever thought about that, you know? What is this, going on? I mean, does it have a purpose? Goldfish, you know, they eat and they absorb things in, and make more goldfish, and they go on making goldfish, and more goldfish, and we don’t even eat them! Maybe something does that we, finally, eat. But fundamentally, what’s the point of a goldfish?

A goldfish is a solemn thing which keeps on going ’round, (you know?)

And it keeps on going ’round and ’round and ’round and ’round and ’round,

Lives beneath the water but is very seldom drowned,

Which is because it keeps on going ’round and ’round and ’round!

Isn’t going anywhere at all! It’s just going as children like to go Bwee-bdwee-bwee-bdoo-bwee-bdwee-bdwee-bdoo-boo-bee-bwup! Or fill jumble, fill jumble, fill rumble-come-tumble, that doubtful old man of Spithead. That’s what’s happening. And so (in very profound theological ideas) it is said, you see, that when we finally go to heaven and we join the choirs of the angels—what are the choirs of angels doing? Well, they’re sitting around in heaven—or actually, dancing—singing Alleluia, Alleluia, Alleluia! You know? When you sing on Easter Jesus Christ is risen today, Alleluia! what is this Alleluia? Well, I must assure you, it doesn’t mean anything. It is a sound of delight, but of no other meaning. It is an expression like whoopee! You know? When somebody’s riding a surfboard and they’re going down, heeeeeooooooooowww! It’s just like that, you see? Well, what’s the point of that?

The point of it is itself! It has no point beyond itself. It’s there. It’s arrived. It’s in a complete present, it is here and now. And that’s what it’s all about. We say to swing it. Get with it. And that is, of course, what all those angels are doing. The beatific vision—that means, the word beatus in Latin, we translate it ‘blessed,’ but that’s a rather pious word. It really means ‘happy,’

‘joyous.’ Beatus And so all those angels—as Dante describes it in the *Paradiso*, when he first hears the song of the angels—he says it sounded as if it were the laughter of the universe. And what? No laughter in church? Well, we’re supposed to be a small replica of the beatific vision, and of the angels gathered around heaven, represented by the altar—you know, the throne of God. Why associate all this with solemnity?

You see, Sunday is a very interesting institution. It’s a kind of modification of the Jewish idea that, after the six days of creation when God was working, he took a day off. Holy day. That was, as it were, the culmination of the six days of work. In Christianity, of course, the Sunday is the first day of the week and not the seventh day, the Sabbath. But the same idea is involved: that once in every six pulses there is a seventh pulse which is a little space of time to take off. Now, six days of your life—say you’re working, and you’re being responsible, and you’re earning a living, and you’re being serious. If you do that all the time you’re going to go quite mad. You’re going to be like a bridge—a steel bridge—which is so rigid that it has no swing in it and, therefore, it will fall apart in a storm. For in order to be sane, every human being must allow himself a little time in life to be insane, to let go, to stop trying to control everything, to stop trying to be God and just go Bwee-bdwee-bwee-bdoo-bwee-bdwee in whatever way you want, see? So when you go to church on Sunday, that’s what you’re supposed to do! You’re supposed to take off from all this thing of laying it on. We’ve made the mistake, when we go to church on Sunday—present company excepted—but most preachers lay it on! They say, This is what you ought to do! That’s what you ought to do! You haven’t been conducting this right! And so on, and so on, and nobody gets a vacation. Nobody gets a holy day, holiday, a Sabbath, time off.

So when you go, the whole idea of church is that this is the place where we can get back to the fundamental sanity of nonsense, and sing Alleluia with the angels around the center of the universe. Which is, actually, manifesting these stars, these galaxies. For what? It’s a firework display. It’s a celebration. You say, Today there will be at 11 o’clock on Sunday, or whatever other time it is, a celebration of the holy communion. Do you celebrate? Or do you comport yourselves as if you were attending a funeral?

I used to be a chaplain in a university and I used to say, There will be a celebration of the holy communion at such-and-such a time on Sunday and, incidentally, if you come here out of a sense of duty we don't want you. Better be lying in bed or going swimming, or something. Because what this is: we are going to have celestial whoopee! And we're going to enjoy it! That's what you're supposed to do instead of coming in and saying Ungh! You know, you're going to go to this thing and you're going to feel how awful you are, how undutiful you've been, how absolutely terrible you've been. And however can you expect to be anything more than terrible if you don't really enjoy your religion? That's what's going to give you the strength and the power to be something other than terrible. But if you just go in and make your religion an occasion of saying, Oh, we've been terrible and we're awful sick, and we need help, and here's the holy communion which is your medicine, and I hope it tastes nasty, you know? That's awful. It doesn't get to the center of the thing, you see, which is: Chesterton put it in another poem where he said—it's called The Song of the Children—and it says of Jesus that he taught to the adults:

He taught them laws and watchwords,

To preach and struggle and pray;

But he taught us deep in the hayfield

The games that the angels play.

Had he stayed here for ever,

Their world would be wise as ours—

And the king be cutting capers,

And the priest be picking flowers.

Because that's the sense of the thing, fundamentally. That everything that's going on is a sort of jazz. A ba-doo-ja-daa, ba-hoo-da-daa, je-doo-be-dah, de-bup-ah, de-dup-ah, de-dup-ah, and everything in the world—the flowers, the trees, the mountains—all going ga-joo-de-doo, ga-joo-de-doo, ga-joo-

de-doo, ga-joo-de-doo, ga-joo-de-doo, ga-joo-de-doo, ga-joo-de-doo, ga-joo-de-doo. And we have piped you and you have not danced. We have mourned you and you have not wept. You won't join the game because you human beings think you're so special, and so serious, and you've got to make sense of it all. There isn't any sense to it! Just join in, come on! Make ba-joo-dee-dah, ba-joo-dee-dah, ba-joo-dee-dah with the whole thing. And finally, you'll be singing Alleluia with the angels.

Fundamentals of Buddhism

I'm continuing this program with talks on some of the fundamental ideas of oriental philosophy. But before going on, I want to refer back to something that I said in the last programme in which I was talking about Hinduism which may possibly have been misunderstood. At the end of the programme, I was referring to certain trends in modern Hinduism which I described as being of a somewhat namby-pamby nature. Perhaps that wasn't quite the right phrase because that suggests weakness what I really wanted to suggest was bloodlessness lack of earthiness, or excessive spirituality. And I think this arises in certain schools of thought. From a wrong interpretation. Of the great commentator Shankara. Shankara and Ramanewja, probably the two of the greatest medieval Indian commentators on the will punish obs. And. The traditional scriptures. And the way some people interpret this is somewhat as follows. That. There is but one reality which is Brahman. Which is without form. Without any quality that the mind can imagine following the usual method of description by negation. And that this, being so, it excludes there being any reality whatsoever to the seeming multiplicity of the physical world. And other words the physical world that we perceive with our senses is in reality simply not of there. And there is even no cause within reality for it seeming to be that and this is rather like the Christian Science doctrine of mortal mind, producing the era of suffering and physical existence. That it has no reality at all, and our seeing of it. Its seeming to be real again has no basis within the divine reality which is the sole thing that exists now this is an interpretation of Shankara which I believe to be fundamentally wrong. I don't believe that Shankara can correctly be interpreted as saying that the world of sensory experience which this to my mind a wrong interpretation

of his school identifies with Maya. I don't believe that this is the way he ought to be understood.

Maya, I can think of passages in Shankar where my yard is given a much more positive sense where the world is not to be considered. Identical with Brahman in the sense that it's not really there and Brahman is the only reality which exists. But rather, that the world is Maya is illusory only in the sense that we do not see it to be one with Brahman just as it is. The seeing of its one this with Brahman does not involve its disappearance and if it does then we've got not a non-dualistic doctrine a tall we've got an extremely dualistic doctrine. Because after all if there is the seeing of an illusion. Supposing you say what you see I. The illusion isn't really there but you can't deny the fact that you see it. And then if that seeing off it has no basis in reality if that in turn is an illusion and the illusion that one sees an illusion is an illusion then you've got a principle that is fundamentally distinct from the Supreme Reality, and in a way stands against it is not explained by it is not grounded in it and therefore this is a highly dualistic form of thought. And as a result all fundamental dualism is lead to. Consequences in feeling and in conduct which are world beating. And this is seems to me why there are trends in modern Hinduism to be excessively spiritual, to regard all sense knowledge as basically evil, in the sense of being fundamentally. And I mean fundamentally unreal.

And this in other words is what I want to educate about these trends in modern Hinduism which I do not feel are representative at all of either Shankaar's doctrine or the doctrine of the punishments upon which the whole tradition of Hinduism is based. Now then today I want to go on to the subject of Buddhism. Buddhism originates in India, somewhere between six and five hundred B.C.. There is always some conjecture about the exact dating of individuals at this time. But it was during this period that there lived a man called Gautama. And Guatama was the son of a king or perhaps tribal chief. Who lived very close to modern Nepal in the north of India. And Buddha is a title given to this man wasn't his proper name just as Christ is not as it were the son name of Jesus as when we say Jesus Christ we should correctly say Jesus the Christ Jesus the anointed one and in the same way one should say not Gautama Buddha but Gautama the but her for blood means an awakened one. A man who woke up. Who In other words,

you must understand this term within the whole Hindu tradition a man who is no longer spellbound by Maya, by the seeming separateness of all the things in this world. That's one of the forms of my yard. And so it would have is not a unique historical character. That can be and it is supposed that there have been, innumerable Buddhas.

But, the idea of it is related to the Hindu idea of an avatar. Which means an incarnation of the Godhead in human form. But is don't think of it as an incarnation of the Godhead. Because, they, although not rejecting the idea of a god or gods, relegate all gods to the world of my yard to the world of relative reality. And in this sense, it is felt in some way to be superior even to the gods let's put it in this way perhaps I'm a. You have seen what is a sort of fundamental illustration of the principles of Buddhism a diagram or map like thing called the wheel of life. And into death and versions of the wheel of life you will notice that the wheel is divided into six realms. And these six realms include human beings, gods or perhaps angels would be a better term for Devas. Spirits of Wrath called asuras, personifications of the destructive forces of nature. Animals. Then what are called naraka, or Purgatories. Preta, or tormented frustrated spirits with tiny mouths and immense that is having in other words immense appetite but very little means of satisfying it and then again humans. And the basic idea of Buddhism is that awakening Buddhahood can be attained only from the human state. Deliverance from the vicious circle which the wheel represents. Life considered as a vicious cycle. The gods are too powerful and too happy to concern themselves to be delivered. At the opposite extreme the people in the knockers the tormented souls in purgatory as it were are too miserable at the animals too damn they are sure those too angry the predators too frustrated. You can take this wheel as a matter of fact not as referring to any actual worlds other than ours of ghosts. All gods and Purgatories. But you can take these six realms as representing states of the human mind. And the human state as representing even mindedness what is called in Sanskrit the picture I can imitate. Now when it is said then that one can become a Buddha only from a human state it means you see that it brought us downs about the gods as being released from the wheel. In a very popular but as I'm of costs as in popular Hinduism. The idea of the wheel is taken rather literally it is in other words believed. That the individual passes from life to life. And is rather funny if that although

Buddhism actually denies the existence of an individual soul as an enduring reality. Nevertheless in Buddhist countries it is popularly believed that some sort of equivalent of the soul passes from life to life and that if your present life is miserable it is a result of foolish actions in the former life but if in this life you act wisely your birth in the next life is to be more fortunate and you may get up of cost to the heaven world of the world of the gods.

But human birth is the thing that is always regarded as most fortunate. Because you can be tied to the wheel not only by chains of iron, and that is to say by acting wrongly. You can also be bound by chains of gold. That is by acting wisely so as to inherit good fruit. Now, of course very sophisticated Buddhists not only in modern times but in ancient times did not take this idea of reincarnation literally. They looked upon it in quite a different way. And just as they regarded the six worlds as states of the human mind so they regarded reincarnation as something happening in this life. Those of you who've read T.S. Eliot's Four Quartets will remember the passage perhaps where he says. That those who have just left the platform of the station on a railway train are not those who will arrive at any destination. Those who in other words, walked in at the door of the Roman are now sitting down in chairs are not the same people as those who stepped in at the door. We are in other words, constantly changing. Just as we know physiologically speaking, that our bodies are, in all their molecular structure completely changed every seven years or so so that we are as it were not enduring entities but rather something like a university where the faculty in the students and the very buildings themselves may change completely within a span of years and yet somehow the university or something by way of a pattern, goes on.

And so in this sense, freedom from reincarnation would be by very sophisticated Buddhists interpreted as freedom from the illusion that the person who came in at the door is the same one now sitting in the chair. And that in its turn signifies freedom from an emotional habit the habit of grasping at one's own life. At seeking for continuity. And you see the idea of continuity in Buddhist philosophy is that we desire continuity in order to perpetuate our past. In our past in other words, we have accumulated various things experiences material goods knowledge but use power, so on. The desire for continuity is the desire for the perpetuation of a past self or

string of selves with which we identify ourselves. And, Buddhist insight involves the recognition that the past is perpetually vanishing. There really is no past to continue. And therefore to cling to it to identify oneself with it is to perpetuate an illusion resulting in incessant frustration resulting indeed in that very vicious circle which the symbol of the wheel represents.

Now Guatama made it very easy to summarize his teaching. He was really quite an addict in what we call name on ix in putting things in simple form so that they could easily be remembered. And he summed up the whole of his doctrine and what is called The Fourth noble truths. And although it becomes sometimes awfully boring to read fundamental. Text on but isn't much you just go over these things again and again I think it's only boring if one goes over them in a very formal way that these texts adopt really it's a very skilful outline of the nature of but as I'm and it's based on an old medical formula in ancient India, as in almost all ancient cultures. Every activity was ceremonial lives and when a physician came to pay his call he gave his diagnosis in a ceremonial way he made for pronouncements. The first pronouncement was the name of the disease. The second, the cause of the disease. The third, the curability of the deed to the disease. Can it be cured yes or no? And if it can be cured the fourth pronouncement is the giving of the prescription. And that's exactly the form of go to most summary of his doctrine. He said in other words the first principle is that mankind and indeed all forms of life suffer from a disease which is called in Sanskrit Dukha. And the most general translation of that word is suffering. To come in suffering in all its forms. Moral physical spiritual. But Western interpreters of Buddhism have sometimes represented him as saying that life is suffering period. In other words of enunciating a highly pessimistic and world hating doctrine that to be alive is to suffer and that in other words the amount of joy of positive pleasure in life. It is after all so negligible that the game is not worth the candle. Now, if one study is the method of teaching of sages in ancient India, you have to realize that one of their fundamental pedagogical gambits. Is. To arrive at their point of view they wish to inculcate. By is exact method, when we walk you know we put down maybe first the left foot then we shift to the right foot then the left foot then the right foot and in this way we go along neither to the left not of the right but straight ahead. And you find to that in thought. That the human mind tends to go from position to position but it always when it settles on

any fixed position we can always point out that that position is an extreme. For example, in scholastic philosophy in the Middle Ages whence and Thomas Aquinas fastened on the idea that God is fundamentally of being, a Buddhist philosophy would point out that he had settled upon an extreme that has an opposite nonbeing. And that therefore his position needs to be corrected by the opposite position somebody else will get up and say No no God is not being God is nonbeing. And from this facing of opposites with each other, we arrive at what Buddhism is sometimes called the middle way doesn't mean the compromise position. The middle way is the doctrine of relativity. Of showing that all positions or experiences which we can formulate, must always be perceived on known. By contrast with opposites.

So in other words, Buddhist doctrine that life is fundamentally do cause of suffering. Is an antithesis. Directed towards those people who believe that the object of life is to attain sukha, or sweetness, pleasure. He is saying in other words. You cannot experience pleasure except in reference to non pleasure. And therefore the more you pursue pleasure the more non pleasure will arise to frustrate you. The more you pursue permanence the more you will feel the empowerment of things. And so it is for after all when we are bent on enjoying ourselves we become at that very moment curiously aware of how rapidly time is slipping by when on the other hand we are not enjoying ourselves we become curiously aware of how time is dragging. So then Dukha, arising from an exaggerated pursuit of sukha, its opposite, becomes the basic characteristic of life. And he goes on to say in his second principle that the cause of this. Is Krishna or grasping sometimes translated desire and indeed I believe the word Trishna does underlie Etymologically the English word thirst. But Trishna is not quite desire for example one's appetite when your haven't eaten for some time and you get hungry this is not Trishna. It's a perfectly natural occurrence. Trishna is based in turn on. Which means unwisdom. Which is the way the Tibetan scholars around here Alex women like to translate it. It's good translation and wisdom of. A simple lack of insight, lack of consciousness, lack of well a special sense of ignorance not the ordinary sense of ignorance of not being informed but ignoring us. Action based on ignoring something. And ignorance is not realizing the relativity of experience is not realizing the inseparability of pleasure and pain existence and non existence life and death up and down good and bad. So that as a result of such ignorance, or

unwisdom, people try to separate these opposites from each other. To corral, to gain the good ones and to exclude and I have laid the bad ones. And as a result of that because these opposites exist mutually. They go around in circles and that mutual existence of these opposites is a really seems to me the basic meaning of the doctrine of karma which is involved in Buddhism the doctrine of conditioned action. Which put a miser in the phrase this arises that becomes. In other words, without this on the one hand this on the one hand always implies that on the other good on the one hand implies bad on the other and so on example. And so, if a person a person becomes involved in karma involved in conditioned action leading to a vicious circle if he is ignored of the into dependence of all states of experience.

So then the third truth the cure of this do cause. Suffering is the truth about Nirvana. Nirvana is most grossly mistranslated word in all foreign languages it's probably. Because we early scholars of Buddhism translated as annihilation and nowadays Nirvana means the state of being doped up to most people popularly used as being. In ecstasy in a kind of dreamy bliss. And your vomit doesn't mean not at all it's a state of being very, very wide awake. State of being completely aware. But the etymology of the word is disputed. There are several etymologies that you can offer and so I just choose the one I like. And that stew blowout. As when, having tried to hold one's breath you discover that you can't hold it you lose your breath by holding it therefore you expire you D. spy rate. And so you he have a sigh of relief. And so only advantage is the side of relief the expiration or desperation. In other words, the giving up of the attempt to clutch at life. To hold it in a fixed form to resist change to separate the good side of things from the bad side and I hate the bad side it is the giving up of that fundamentally contradictory self contradictory kind of conduct.

And so then in the fourth truth there is, set up the Noble Eightfold Path. But as prescription for to cause. And the Noble Eightfold Path is really in three divisions one of which concerns itself with understanding might almost say intellectual understanding of the doctrine. That one is concerned with conduct. And the third part of it is concerned with the state of consciousness or meditation. Now, to summarize them briefly one of the first stages of the path as a right view. Or I prefer to translate the word samyak, not so much as right. But as perfect in the Greek sense as telos or

complete. And, thus, to have a complete view, is a view which does not take sides, which takes the middle path. Which in other words, does not go off to extremes. And so, on the part of the eightfold path that is concerned with conduct of Buddhism is often represented as having a very exalted ethical system and this is true in a way it does. But also one must recognize the difference between Buddhism and Christianity as any rate as Christianity is ordinarily taught is that these ethical ideas are not commandments. They are really, forms of expedient conduct. The Buddha counseled his followers to take upon themselves sudden obligations they have not killing not stealing, and not exploiting the senses of not getting drunk or intoxicated with poisons, not lying. Because, not because these were against the will of God or against the fundamental laws of the universe but the. As they are inexpedient forms of conduct for a person who wants to wake up call if you get thought only doped up you're not liable to be very wide awake.

And then finally, the end of the path the last stages of it are concerned with one state of consciousness. With the being...the with the process of what is sometimes called meditation. Or of bringing one's mind to its maximum awareness through clear recollection. And then finally the attainment of what is called somebody which means integrated consciousness consciousness no longer under the influence of avidya. No longer bamboozled and fooled by the apparent separateness of things which are really inseparably interlinked. And thus samadhi could be called Integrated a unified consciousness in which it is seen that the subject of the now is inseparable from the object the known that man is inseparable from the totality of life and so on and so forth so that somebody at the end of the eightfold path might be described as being the entry to all realization the making real of the state of nirvana, which constitutes in time being a Buddha.

Daylight Savings Time and God

The last Sunday in September is the day when we go through the amusing ritual of putting our clocks back, and to revert what some people might call God's time. I say amusing. Because the practice of altering our clocks for saving daylight has always 'jiggled my funny bone just a little.' It seems a kind of way of fooling ourselves into getting up an hour earlier. Why don't

we just get up an hour earlier and let it go at that? Well I suppose in practice the idea of putting the clocks back has something to be said for it in the way of saving a reprinting of all the airline and railroad time tables. But it's very illustrative of ways in which human beings fool themselves. And it offers what I feel to be a very instructive parallel to a lot of argument that is going on these days about going back to the old time religion.

I've speculated a good deal about this, and I'm not at all sure why, in certain circles, there is so much talk going on about God. And there is a kind of flavor in this revival of the idea of God which I don't like, it's sort of sinister. People want to write into all sorts of documents that this country is under God. And in this idea of God of course there speaks the projection upon the cosmos of the benevolent despot, the great patriarch. Because of course, it's very convenient for people who want to play the part of benevolent despots and authoritative patriarchs to feel that they have some backing.

It is as I suppose. You feel a greater sense of authorization if you get up an hour earlier by doing so at the usual time through altering the clock. But the practice of changing the clock illustrative of another phase of this whole recrudescence of the idea of God. The patriarchal God. Because in going through all the various reasons which in the past twenty five or thirty years theologians have been advancing for reasons why God should be believed in, this kind of God should be believed in, I come across only one really dominant argument. That is to say, I've never found anybody yet in writing in modern times who has advanced what seemed to be any new simply logical reasons or metaphysical reasons for the belief in God. Most of these are simply repetitions of things that have been said hundreds of years ago.

Most of the reasons that are now advanced have to do with what an advantage it would be to human life and human society to believe in God. In other words, we have problems with juvenile delinquency. What a pity, if outside the Roman Catholic Church we cannot scare these children into good behavior by frightening them with ideas of hell and judgment. Or appeal to that sentiment by saying for example, look what your sins have cost to Jesus Christ, you put another nail in the cross. But it's a strange thing isn't it that sin has been running around in the world for an awful long

time and people did desperate depraved and horrible things. When the old time religion was in full swing. And one of the reasons why it nowadays we think the world is going to the dogs. Is that everything happens not only on a much larger scale, that everything happens within the sight of everybody that is to say there's so much news, there's so much communication. And you just slug someone in a back alley in San Francisco one night and it's all over the headlines in the morning. And therefore, the presence of evil is perhaps drawn to our attention more than it ever was before. But people very frequently say that the belief in God is necessary for preserving the dignity of man. In other words, if a man, say in the conception of the nature which is held by people we might call mechanists, if man is simply a piece of machinery. Of very complicated machinery which emerged as a result of the blind. Changes and processes of nature then he is qualitatively no more than a cow. Or any other domestic animal. He's just more complicated that's all. And therefore the argument goes, if human beings are only a mechanical cattle, and cattle are only very complicated chemical mechanisms, just as we exploit cattle, breed them impersonally, kill them when we want to eat them, and generally push them around. So also, if man is just this kind of thing there's no reason why we shouldn't just push him around there's no reason why we shouldn't gas millions of Jews if we find them inconvenient, and so on.

In other words, that the basis of the argument is, if man does not have some sort of guarantee beyond himself for his dignity, for the rights of his personality, then all chaos can break loose. And the Human being can be simply degraded, as indeed he has been degraded in modern times. But it seems to me a very very false and perhaps dangerous argument to say that the foundation for this dignity must be a belief in God. Because the believer in God will say no you must not humiliate human beings in this way. You must not despise human dignity, because man is a child of God. Every individual human being is the object of the love of God, has a special destiny planned for him by God, and therefore for this reason and on this authority, you must not treat human beings as if they were just machines are just animals.

This is similar to the argument frequently produced by Roman Catholics in commending the superiority of their form of Christianity to the various

forms of Protestantism. They always say, well, what you believe as a Protestant is simply a matter of opinion, and it's your own private judgment whereas a Catholic suspends his private judgment and believes because he also believes that he is bound to believe, it is an act of obedience. And this is an equally silly argument. Because it simply conceals the fact that to believe that you are bound to believe in something that you believe it's a matter of personal opinion and private judgment. It's an act of private judgment to accept the authority of the church. And in the same way, if we say the guarantee for the dignity of human personality is the existence of God, I'm going to ask then what is the guarantee for the existence of God? I suppose this is a know sort of sophisticated form of the child's question, if God made the world, who made God? But it really is rather a good question because you can answer nobody made God. God isn't made, and then the child can come back if he's smart enough well why couldn't you say the same thing about the world.

And so in the same way, when we say only God can be the guarantee only belief in God can be the guarantee for the proper treatment of human beings then we must ask again what is the guarantee for belief in God. And it's simply, in other words, a way in which we can kid ourselves into a certain forms of conduct by laying down a premise just as we kid ourselves into getting up early about changing the clocks. And while as I said, changing the clocks may be actually a practical idea because of the time tables and all the reprinting of stuff, it's very important to know what you're doing when you're doing it it's very important to know that you're just changing your standard of measurement and that you made the standard of measurement that the clock is your invention. And so in the same way, it should be important to realize that when people start talking about the need for belief in God again, this is just a gambit in the art of ruling. A gambit in the art of preserving law and order. Only, it seems to me in this case to be not so useful and in many ways to confuse the issue profoundly. Because it gets us into the strange state of mind which you find so often in discussing the problems of human conduct and thought, that people want to base their actions and their ideas upon some sort of authority. And it's strange this, for a Christian, because it said of Jesus that He spoke as one having authority and not as the scribes. And to have authority is a very different thing from following authority. The scribes, you know, were the sort of people who

never said anything unless they could quote somebody else as having said it before some great and Rabbi of the past to whom time had given the kind of distance of divinity.

And in the same way, when we nowadays in our academic world get what is called an authoritative text, you may be sure that the author Orotate of text is absolutely jammed with footnotes nobody dared say anything without documenting it. But, in a deeper sense than that, people want to feel that certain forms of conduct, certain ways of life, are not things upon which they can safely embark unless they are in some way authorized. That is to say, unless they feel that this is in accord with the will of God, or if they don't believe in God In that sense they want to feel that it's in accordance with what is natural with what is in accordance with the laws of nature, or else it's perhaps with what is in accord with the opinions of a very celebrated person or with some other forceful and successful group of people. There's always this curious desire to found what one does and thinks on authority. To get, as it were some basis outside one's own judgement and one's own will for doing what you're going to do. And then of course, when it what you do is challenge either by other people or by life itself you can say well I, really I wasn't responsible I acted on authority, but without authority.

And so we can see how in this sense we kid ourselves by invoking and inventing reasons for what perhaps deeply we are going through what we want to do and we're going to do anyhow reasons which somehow seem to pass the buck, to shelve the responsibility on a higher shelf. At the same time, you might think that an argument of this kind would Come on naturally from a person who is simply an atheist. Who believes that the universe is a drifting process that is absolutely without any sort of authority behind it. And that man finds himself in this process and has to make the best of it that he can make. And this is the difficulty which I think today, very very many thoughtful people find themselves in. The notion of God, as presented by tradition whether Hebrew or Christian is utterly distasteful. But mechanistic atheism is equally distasteful. Because as a matter of fact both of them rest upon the same premises. The atheists, mechanistic universe, of course, not all atheists would be mechanists but very often they are. But that universe is based on the same premises as the universe of the

theist. Atheist and theist seem so often to be heads and tails of the same coin, acknowledging the same premises because both of them naturally look upon the universe as an artifact, a machine as an artifact only in the case of the atheist or what we might call the moon mystic naturalist the architect has disappeared and there is just left the machine. It's all part of this thing which I've mentioned occasionally our attitude of regarding the world as a collection of objects.

And we of course have justification for this in so far as looking at the world as object has been such a successful way of dealing with it we don't pray to the wind anymore. We don't speak to the rain or to the sun as if they were people we look upon them as objects, that is to say, just as not people. And of course as time goes on we know more and more objectively and scientifically about ourselves in our own minds we can regard ourselves as objects. And so indeed, we do get the depersonalization of man which the people who call for a return to belief in God or at least some of them are afraid of and we get this feeling of the Universe being hollow, empty, a rattling shell. An altogether impoverished affair, with no more any life in it it's all just hurrying atoms, as Whitehead said. Now, it's always seemed to me that the difficulty or one of the main difficulties with the Hebrew Christian idea of God is that it's much too specific. In fact, it's strange isn't it that many apologists for Orthodox Judaism or Catholicism or some sort of neoorthodox Protestantism, rather pride themselves on the specific character of their god and make fun of say Christian Scientists or new thought followers or liberal Protestants who have a very vague idea of God and they say oh these people are so we're really and so vague and so sort of the implication is that timid and haven't got the guts. Whereas we have a good strong definite belief. And they laugh about it and make jokes and have a great time, not realizing that it's precisely this specific idea of God as something not just unimaginable but having a nature which has been revealed, say through the character of Christ, or through the Scriptures or through the church, which is intelligible to man even if man can't know everything about it. But the difficulty you see with all these specific accounts of God is that on the very terms of a Jewish or Christian attitude to life then I don't address. They pretend to knowledge which nobody has the right to pretend to. They form a specific image in the mind of what God is. And that specific image in the mind is far more idolatrous than a specific

image sitting on an altar, because it is more persuasive. And therefore, it seems to me at the same time, that while we cannot lose while I cannot utterly reject every meaning that the word god has ever had. I at the same time feel still. That I want to be able to have at least a symbol. Which will embrace the concept of the totality. Or worlds. By that, I don't mean simply an additive concept, world plus world plus world, just the total collection. Because I don't think this world is a collection it's only a collection of things if in the first instance you have split it up into things in order to think about it. But if you think of the what a physicist might call the total field of phenomena, there's something that we can think about because we can't get our minds round it we can analyze it and measure it and so on and so forth but all we have is various projected systems of measures which we use in just the same way that we use the measure of time to chart the movements of life.

But time isn't up there. There isn't a kind of cosmic clock with calibrations on it. We invented it. But at the same time, the, I think of almost anybody of any sensitivity at all finds it hard to regard the total realm of physical nature as something which he can sort of shrug off and say well radioactive gas and machinery. Because it always makes us wonder there are various ways of wondering one way of wondering is to ask well, what explains it all? And that creates that kind of question in the mind which we call wonder. But that's not the only ground to wonder, Supposing I say well, perhaps to ask for an explanation of it all is the wrong question. That's only after all translating the history of what has happened into words. This is what we mean by an explanation. And explanations never fully explain because there's always more explanation that can be done more words that can be said, more events behind the events of history and so on and on forever and ever and ever.

What is also at the root of wonder is something perhaps more aesthetic is simply the admiration. The astonishment. That a world exists at all. And the realization that a great deal of it in fact, almost all of it, is something which influences us, rather than something which we influence. Now of course, if that is then something of which the world as an expression which we will just call X. Or, if we say energy like a physicist might say energy is a kind of devitalized word Strangely enough it means something mechanical like

electricity. But we don't know what it is. And part of our difficulty is that wherever we look, with our eyes, with our instruments, we find only the surfaces of things and the surfaces it within surfaces so that there's only one place where we as it were have a very intimate acquaintance with what existence is, and that is in us.

But it's a strange thing that at the very point where we have the most intimate acquaintance with existence it is the least susceptible to objective study, because it is too close it's the very middle of us. And it is there, in the unknown. and ultimately it unfathomable springs, of our life our action and our thought. That we are linked with. Whatever this X is, of which all the world is a manifestation. I don't want to say man... Manifestation is a curious word, because it sometimes suggests that. What is manifested. It's very different from that which is manifested. In other words, that while on the outside in the manifestation we see all the multiple and glorious variety of this world. What's on the inside must be somehow one instead of many, and therefore sort of an interesting live shapeless, something like wasn't it C.S. Lewis said tapioca pudding. Or Jell-O. or something like that. No, I only say manifested in the sense that there is a way, and we experience this way when we experience our own existence. In which the world is not accessible to our examination and our control in a very intimate deep way. And I would say it's there you see that our ingenuity stops. Not it doesn't stop at a dead halt it's slows down gradually as it penetrates deeper and deeper. And it's at this point that we could exclaim God, more perhaps as an exclamation of wonder than an affirmation of a theological proposition.

And I feel that it's profoundly important, not just to put out of mind the illimitable mystery from which we spring and from which we act. As something that just can be neglected. Because then indeed we do become what the theologians writely fear. We become inebriated with pride, we become cocky we become people who think that they can push the whole universe around and arrange everything just so and then we get into these enormous difficulties, like the Sorcerer's Apprentice who got hold of the magic, and didn't know how to keep it under control because he didn't have respect. He didn't proceed with a certain caution. And so, if anything it seems to me that the future of the idea of God will involve less definition and much more vagueness. And in this wakeness of clear delineation will

lie this strength and the difficulty to exploit it by people who just want to rule human beings.

Constitution of Nature

As I think it over it seems to me that the high civilisations of the world have produced exactly three different views of the constitution of nature, of the physical universe. And to enumerate them I would call them respectively, nature as a construct, nature as a drama, and nature as an organism. The first two, nature of the construct, has until very recently been characteristic of the Western world. The view of nature as a drama has been largely characteristic of India. And finally of nature, as an organism, has been characteristic of the Far East. I'd like to compare these three views and point out the certain of their advantages, disadvantages, and the ways in which they complement each other. And I think that was part of the interest of this is that our thinking more and more I've been fascinated by this, that are thinking about the world is strongly influenced by analogies. By, sometimes analogies that are almost hidden, so far back in the history of the thought of any given civilization or culture. That they have taken as something more than analogies, they are taken out almost you could say as logical patterns. And they are basic to our grammar, to our common sense, and to our attitudes, in ways that often go unsuspected.

Why don't we start with the Western view of the world as a construct? By this I mean, the the the physical world has historically in the west been looked upon as a created or manufactured article. The work of a creator external to the world, and this view has continued in many ways even after the rise of deism in the eighteenth century and the general tendency of the scientist to dispense with the hypothesis of the Creator, the idea still remains that the world is a construct analogous to a machine, and indeed obeying laws all plans in the same way as a machine obeys a blueprint. Even though the law giver and the planner himself seems to have disappeared. The basic metaphor though, underlying this is not so much the machine. As the work of clay the pot or the sculpture, of the modeled figure. For as you know it is said in the book of Genesis that the lord God created Adam out of the dust of the ground and breathed the breath of life into his nostrils.

And so our language, our poetry is full of all of allusions to the fact that we are really after all clay. Imperial Caesar dead, and turned to clay. Might stop a hole to keep the window away. And because of this figure, it is as I have often said come to mental to our common sense. But the world is formed matter. The forming the shape of the pot, the matter being the clay. And thus, we think of life as being basically. Something done to a medium the medium is stuff, a kind of ominous and inert self in out and unintelligent goo, which requires an external agency to give it form and intelligence and life. And naturally because we have thought this way for so long it's a terribly difficult idea to abandon to get out of I had the notion. That, in the same way that tables are made of wood and houses of stone.

So we tend to think that trees made of wood and mountains of stone and people are flesh and all of it eventually reducing itself to the primordial goo that the universal Clay the primal matter, the formless original water over which the Spirit of God is said to have moved in the beginning of all time. Now, beyond the idea of the world as a work of pottery lies the most sophisticated idea of the world as a mechanism. In this western view of the world as a construct. As soon as men began to understand mechanical principles, it became extraordinarily convenient to make analogies between various types of machinery, and things to be found in the world. And it is really upon this analogy, that the great achievements of Western technology have hitherto been based. And, it's really very difficult to think that we could have devised our technology and that our practical sciences could have made such progress. Without the idea of the analogy between the world and a constructed machine. You see, one of the most fundamental things about a machine is that it is an assemblage of parts. And, the successful measurement and description of nature depends upon the calculus, upon reducing it to parts. You know the word calculus originally meant pebbles, and pebbles were one of the oldest methods of calculating. Counting pebbles. In a funny, kind of association of words, calculus is also calculating, in the sense of having a calculating attitude. Scheming. And scheming is associated with turning things to calculate. It is a sort of killing the world, reducing it from the living to the dead, from the organism to the machine. But nevertheless, it has had the most marvelous consequences so far as we are concerned and the cultures which thought of nature by analogy with drama and by analogy with the organism did not produce the

technology that we in the West produced. Let me just for a moment, contrast the attitudes. The Indian attitude of the world as a drama. In Hindu thought, the world is not thought of as being made or constructed by God, but as being actually God himself playing a game. The idea of one single divine actor who is playing all the parts of all the creatures in the world imagining himself to be them. To see me as it were, myriads of masks behind which there is simply one where of the mask.

In a forthcoming book, the second volume of the masks of God is not published yet but I've seen a copy of Joseph Campbell. Contrasts the way in which the myth of the one who became to the one that became many, has gone into quite different directions beginning in ancient Sumeria, which constitutes as it were a sort of cultural watershed. It has flowed eastwards in one way and westwards and another to the east the idea that the one the Godhead in other words split itself. And dismembered itself into many parts quite voluntarily, and thus became the world as a play. To the west, the theme of the one who became many is different because, as he points out in the book of Genesis it is not the divine who becomes male and female it is the creature. In the Upanishads say the breed had the long ago punishment of the divine self. Is. Described as have a saying in the beginning of time let me become two and he splits into male and female and thus generates the world but in the book of end of Genesis it is not the Godhead who splits it is man the creature who is split into Adam and then into Eve.

But thus in the Eastern world we have the dramatic view, in India in particular. And although it's interesting to note that in say in the writings of the great philosopher Shankara and others the or very often encounter the analogy of the potter, or of pots as representing the world the roles are reversed. The it is the clay is used as the symbol, for the divine reality. Just as pots are all made of clay or as jewels or all made of gold. So, all things in the world are of one divine substance which is of the nature of the Godhead, or Brahman. Is interesting, the different use of the simile. And so, from the standpoint of the dramatic view of the universe, all the divisions and distinctions of the world are looked upon as being a kind of as if. They are in play, they are not quite serious. And this contrasts very sharply with what has been the characteristic Western view the distinctions in the world are the most important things about it. That they are deeply serious. The

distinction for good and evil is an eternal distinction as is the distinction between the creator and the creature. The world in this view is not a drama. It is played not by actors, but by what we call real individuals even real persons although funnily enough as I suppose you know the word person is originally persona. The megaphone mask worn by actors in classical Greek drama.

Then thirdly, there is the organic view characteristic of China. In this there is no real thought of there being a divine creator or a divine actor behind the world. But rather the world is thought of as being self-moving and self-creating. The word for nature in Chinese means what is of itself so. When, in the West, a child asks its mother. Who made me? And she replies darling God made you and the child asked But who made god. She has to say nobody made God. And that is a great puzzle to the child who thinks of the world as a construct. And, it may be explained to the child if you like, that god makes himself, he exists off him self because he is existence. To put it in more theological language, he has the attribute called Say it. From the Latin OS A by himself.

Perhaps, some kind of off on telly but would ask the question well if that's true of God Why couldn't it be true of the world in the first place? Why did you have to make that additional step in the first place? If he did so he would be thinking more or less in the Chinese way. Which does not think of the world either as an artifact of some make all as a mosque or appearance warm by some sort of deeper reality. He doesn't, in other words, have a two level view of nature, as an appearance underneath which there is something else to explain it. He sees it all rather as self evident. As being something which regulates itself. And indeed alters itself. There is a sudden sense you see in which the Chinese view is fundamentally Or you could almost call it anarchical. Or if you don't like that word, you could call it democratic. A world which is self-governing. Not even through a president. But self-governing in every way a great and colossal an it because which moves itself in the same way as you and I move our fingers. Without directing them in the sense that we know exactly what we are doing and how we move them. We don't.

Now, I've said that the Western view is probably what made it possible for us to develop our highly advanced technology. By thinking about the world as a construct. We could think about the laws or principles, or plans, or regularities upon which it was based. We could think for example, of the calculus, of number, as the basic characteristic of the law upon which nature is based. By doing that, we caught on to the idea of thinking of all things as reducible to atoms to parts, to bits. And then by thinking of bits, we found that we could measure the world very accurately, describe its regularities very accurately. And that gave us an astonishing degree of control over it.

But this is a point of view which is successful to a certain degree. It goes well up to a certain level after which it begins to develop complications. One thing, you could say, it has complications which of psychological on the one hand and practical and technical on another. From a psychological point of view, it's complication is that when it becomes common sensical to us to look at the world as a mechanism, we begin as humans, as people capable of feeling and love, to feel the external world rather alien to us. Yes, it's a machine. It's a great big automatic mechanical arrangement. Which, in essence, is simply stupid energy. We thereupon feel that it has nothing in common with ourselves, and perhaps even though we try to give the same sort of account of ourselves, and try to reduce our brains and emotions to some kind of neurological computer mechanism, that makes us in a way hate ourselves. Because soon as we start thinking of ourselves as automata, we begin ethically and psychologically treating ourselves as automata. We lose respect for ourselves and thereupon feel that what is central to us the feeling center of the person is trapped in a cosmos that is a mechanical night to match foreign and strange. We can see ourselves as a kind of ghastly accident. And I don't wonder that this engender has certain kinds of suicidal tendencies in our culture. So much for the psychological point of view. From the technical point of view, the analogy of nature with mechanism develops its own disadvantages after a certain point. That is to say, the disadvantage of trying to manage the physical universe as if it were indeed a an assemblage of separate parts or separable parts. The first sort of person to notice this mistake would be the extreme subject law medical specialist. Who knows for example. All about hearts or about stomachs but they're little about brains or lungs. And who treats one or going at a time and becomes unaware of the imbalances inflicted upon other organs by

what he's done to the organ in which he specializes. Also in the same way, the specialist always tends to see the units of nature and to be unaware of that connection is all relationships, which are after all inseparable relationships with all the other parts.

There is you might say also, another technical disadvantage again which develops them in the course of time to this particular mechanical analogy. And that is, that when you begin to rely more on more upon minute and careful description of the world. For dealing with it, and that of course involves the reduction of the world to describable units it. The world then becomes terribly complicated, and it becomes increasingly difficult to keep track of all the minute units that you've described. Hence the difficulty of specialists in the various sciences communicating with each other and the difficulty of the scientific specialist in communicating with the layman. The whole thing becomes much too complicated to manage. And this then means that. The more we know, the greater our skill in managing the world as a mechanical construct, the more difficult it becomes to control because it becomes increasingly complex. We talk endlessly about the increasing complexity of political, social and economic affairs which makes the problems of the world increasingly unintelligible to even the average well-educated citizen.

Now, it has been suggested that the Western view, nature as a construct, has in some ways done its job. And that from here on we need to explore to a greater degree, other views, perhaps the organic view of the Chinese where in we get a became really a harmony of points of view with our own sciences biology, ecology, and so forth. As if somehow this view had been tucked away in a store cupboard, waiting for us to be available at just the time when we needed it. The problem here is an entirely new one, because we're so used to thinking of our problems of controlling and understanding the world in terms of the methods of mechanical science.

Not so long ago, I was talking to Lyn White, who used to be president of Mills College, and he was saying that our academic world, values only three kinds of intelligence whereas it is said there are many more that at least seven I don't remember what all the seven were but he said that the kinds of intelligence that we value our first of all mnemonic. Which is the

ability to remember. Computational intelligence, the ability to figure. And verbal intelligence the ability to read write and talk. But he said there is also social intelligence. And that is also kinesthetic intelligence. A kind of intelligence, kinesthetic, in which we learn as children to walk to run and throw and catch balls and to do all kinds of acts dreamily complex and very subtle actions without being able to describe, or counts what we are doing. Perhaps, in handling far more complex matters, and catching balls, or skiing, or riding bicycles we may have unknown resources of kinesthetic intelligence for dealing with some of the problems that now face us. Here is the germ of an idea, which Chinese culture and Far Eastern culture in general suggest to us. Perhaps they themselves have only dimly begun to explore these things, but I think that it's in that direction that the future of practical philosophy and government of the world may lie.

Buddhist Mysticism

Just this month a new book has been published by Dr D.T. Suzuki called *Mysticism, Christian and Buddhist*. I'm not intending to devote this program to in review of this book as such but I call attention to it. Incidentally, it's published by Harper's in New York for three dollars and fifty cents. But I rather want to call attention to a particular theme, with which the book deals with will seem of a peculiar type of Japanese mysticism I suppose you'd call it, associated primarily with the title put design which is caution Shinju. Should issue are to know it by another name God of our land but isn't is one of the most popular forms of Buddhism in the Far East.

Spreading over China Japan found Tibet, originally had some following in India. But has undergone a very marked and special type of development in Japan. And what makes it so popular is that in contrast, or apparent contrast I should say with other forms of Buddhism, it stands as a kind of easy way, as distinct from a difficult way. In Japanese technical terms the two types of Buddhism are respectively called Jiriki and Tariki. Now Ji means one's own are self and means other and Riki means power and so the schools of Buddhism which call themselves Gili. Are ways of Deliverance which one follows by one's own will one's own power one's own strength. Whereas on the other hand the, type of Buddhism called tariki, is where you rely on the

power of another and this other is usually speaking. If I may put it in somewhat mythological terms. A great supra-mundane Buddha. Known as M E Tara in Japanese as Amidha. And the story goes that in incalculable ages in the most distant past this great Buddha made a vow. That he would not enter into the state of complete Buddhahood. Until. Any human being upon the face of the earth who pronounced his name in phase would after his death be reborn in the Western paradise of which we target presides. And find Larry in. Far greater ease of spiritual development of awakening of the coming of border than is to be found on the face of this difficult earth.

And all this of course to rise from the ancient India Indian idea that the present the park of the world's unfoldment is the darkest of dark ages, called the Kali Yuga. And in the Kali Yuga, or the Mapol is scholars it is peculiar only difficult. To advance towards any kind of spiritual development because it's an age of decadence the end of which will witness the total destruction of the world prior to its remaining manifestation and some future time. And therefore, the story goes on to say that this great Buddha, did, in course of time, attain to complete put up with. Signifying fact that his vow is fulfilled and that any. One who simply repeats the formula Namita higher in Sanskrit or in Japanese now. Which is roughly translatable in English as the name of Amitabha Buddha. Or Namu who is used in the formula is used in Sanskrit or Japanese somewhat as the French say Nandan Nandan are they just same name. Meaning hail I suppose in English we have no real equivalent of it.

And the idea is that anybody who repeats the name of the Buddha Amitabha in perfect faith. Will without any other effort, any other kind of spiritual endeavor on his own part. However evil however it prayed he may be. He will be reborn after death in this spiritual state in which the task of becoming a Buddha is rendered so easy as to be as we should say in perfect cinch. And of course all commentators on Buddhism say Well this of course is how religions degenerate. They become popular, pie-in-the-sky selling organizations. Where absolutely nothing is required of the faithful except an occasional contribution and the easier you make it in contrast to the other sects which make it more difficult for more people of luck to your following out of the contributions will be and it all ends up with the

pressure we all well all you have to do is make the thing revalue don't even have to think about it and incalculable supernatural merits all start up on your behalf.

But it's very dangerous to jump to conclusions of the sky about this type of Religious or spiritual manifestation, because in practice the Shin school of Buddhism has had some of the most remarkable adherents. And produces a type of personality which is known in Japan as a Miokonen. Literally translated Miokonen means a wonderful and fine man. That's just a literal translation with doesn't at all convey the sense of this kind of personality of them are common. But the Miokonen A man likes in run him self cool found in the shins school of brothers and in Japan is a man who has in a way, understood the profounder meaning of the doctrine of the school. And perhaps before I talk about the personal characteristics of the Miokonen. I should try and indicate. What may underlie what may be the deeper meaning, of this seemingly, decadent highly popular and easy form of Buddhism.

Perhaps the best way to do this is by means of the critique, which this particular school uses against those who follow the other way will follow the way of Jiriki or self power. The followers of the sions coom would say, that a person who attempts to make spiritual progress by his own efforts is betting against the worst possible obstacle to any progress at all. And that is that in thinking that he can do it himself he is like a person trying to lift himself up by his own bootstraps Or to put it in another way, he suffers from the pride of imagining that his own will, his own energy is sufficient to change himself. After all, if he needs changing at all, it is precisely the character in the motivation of his own will and his own energy that needs changing. And how is this change going to be achieved by that very will win so stands in need of change. To put it in the more usual language of the school of thought, they say that the average human being is so weighted down by karma. That is if we put it into more modern terminology we would say, he is so fundamentally conditioned by his upbringing, by his social environment, by the temptations of the world, the flesh and the devil, there's really nothing he couldn't do to make himself any better and everything that he does do is simply a manifestation of the same conditioning masquerading like a wolf in sheep's clothing. Therefore, if the

human being cannot transform himself. If used to be transformed at all, he must rely on some power greater than his own.

Now of course, this other power may be represented, figuratively speaking, like we represent God in the Christian tradition as a spiritual entity off force or intelligence quite out of them and apart from man or it may be represented on the other hand as other than us in just the same way look at the functioning of our own bodies the beating of the heart of the operation of the lungs goes on quite independently of the conscious will and his other in that sense although in another sense those unconscious and automatic or spontaneous functioning of our organism could be understood as Ma fundamentally and truly ourselves than the things that go on in our other superficial consciousness and if you interpret it in that latter way, the idea of how to keep our reliance on the power of another is really a reliance on something deeper in yourself than yourself is consciousness, and that I think is the sense in which the profound the followers of the school of Buddhistic thought to understand doctrine. So the Miokone, As I said literally the wonderful fine fellow, is the kind of personality which this doctrine in Genesis Now what is he he's the kind of person, who has realized through and through the fallibility of his own humanity is the kind of person who knows himself far away who has a rather wry and humorous view of his own own, shall we say his own high motivations and ideals. He knows himself thoroughly for the rascal that he is and doesn't pretend to be anything.

And this. If that were all the word to it is a very likable former fellow from my point of view. I always feel uncomfortable with people who don't have this realization of their own inherent rascality the people at pretensions to holiness and righteousness, who are so deceived as not to know that in their heart of hearts they are after all rapacious and selfish human beings. But the Miokonen makes no bones about this. He knows that's what he is and he knows that by the exercise of his own will and his own intention and his own conscious effort, he can't be anything else. And so there is in him a kind of fundamental honesty and sincerity from the start.

And, what he goes on to be beyond this is something a little different. Because a Miokonen is called a marvelous fine fellow, because somehow or

other he does seem to transcend the ordinary kind of human rascality to become. A truly unselfish. A truly human being loving others, understanding others, sympathizing with others, a wonderful compassionate man. Because he has been unable to love himself, to accept himself in the profoundest possible way. For if you translate it into more modern and less symbolic language this idea. That by the mere repetition of a formula, by the mere act of faith in the power, a transcendent Divine Being, one is able to be saved or made a Buddha or perfected just as you are by an act of magic which lifts you up and transfers you to another realm.

If you were to translate that as I said, into a more contemporary way of talking. It would be to say something like this. That the intent of the symbology is to say that the condition of growing, psychologically and spiritually, is to let yourself and alone, and not to fight against what you are. The more you try to make yourself great. To make yourself unselfish, to make yourself loving, you are simply tying yourself psychically into a knot, a kind of paralyzed state, which makes it impossible for you to be anything except as we might say all balled up. But if on the other hand, you let go of yourself and do not try to change yourself, you relieve yourself from this inattention, you as it were, unblock the conduits of psychic energy within yourself by not straining on and are therefore enabled to grow naturally like a tree or a plant. And this is exactly the attitude of the Miokonen.

I think that one of the most fascinating of these characters as one who as a matter of fact did not actually belong to the Shin school of Buddhism. Although he as in many ways entire. The same spirit because of room there is not so much difference between this profound understanding of the Shin school and other types of Buddhism such as Zen. Zen is ordinarily understood to represent the extreme of the jiriki way, of fighting along by one's own strength. But the intent of the jiriki emphasis of Zen, the self-powered, the willful, driving sense is something like this. To exert one's will to the utmost in order to realize its futility to make the most desperate attempts to change one's motivation and once conditioning in order to discover that in the last analysis it can't be done and it is this and that it is merely the futile struggle to lift yourself up by your own bootstraps.

And so, as a result of this, the jiriki form but as I'm producing very often the same type of personality as the Tariki. And one of the most marvelous examples of the Spirit is a monk or I'd rather call him a hermit and poet by the name of Riokan, who lived between seventeen fifty eight and eight hundred thirty one. A man who is extraordinary in all the annals of sainthood and sanctity. For the reason that everybody loved him I don't think he had any enemies at all, and this is really a very remarkable achievement. After all, it's so easy to be so holy that you are a challenge to the world, and everybody feels uncomfortable in your presence feels an accused by your sanctity and given a bad conscience and result the result of that you get loathed, you make all sorts of enemies and finally you get crucified.

But it's really a very remarkable achievement indeed to be all that and lovable and top. To be without enemies, the friend of everybody, and yet. Involving absolutely no compromise with one's integrity and honesty. Such a man was Riokan, really marvelous. And many, many stories are told about him and I think these anecdotes about him describe his personality more delightful than anything I could say by way of a character analysis or comment in that fashion. First of all it was to be understood that the Miokonen, or the type of person like real can is one who has truly become again as a child. He's not seen a whole he's not in second childhood in that sense but a person who is really full of a genuine wonderful life. Who has some accepted himself some let go of him self is so you're not pretending to be anything gives himself, no airs and graces that he can relax and be perfectly natural and so the story is told. That one day in Riokan was going along baking is food and he met friend invited him to spend the night at his home. Well, in the room where he stayed it was a picture of a tiger egging on the wall. And real can look for a long time in the picture and was so intrigued by it that after a while he came to feel that he himself was a tiger and he fell to the floor and all running around on all fours he growled at the tiger in the picture he said and the Tiger seemed to look at him and answer him you know can again shout. And the Tiger seemed to answer and appeared to be going to approach him. And Riokan getting a great deal of fun out of this game repeated it many times. But just then a maid of the house. Appeared. And was quite astonished when she saw the priest on the spot. For a moment she didn't understand what had happened and was very

frightened and then she recognised him oh Rio comes up so it is you who frighten me so much what are you doing there. Startled by I have voice real can't stop his game of imitation and shamefacedly spoke to her on his knees. Did you see what I was doing he asked you did oh that annoys me very much about good mate please keep it a secret otherwise I would not to do will know what to do for people will think I'm crazy.

And then there's another story which tells of. A certain party who came to the little hermitage where he lived in the mountains. Bringing a letter from one of his friends. And just at that moment real count was absorbed. And trying to juggle his big bowl on the top of the pole. When the messenger called out and delivered his letter real can stop his juggling for a brief interval glanced over the letter and wrote his answer. The Baron made his departure. And Riokan resumed his play his bone time after time slipped down to the floor but again and again and set it up on top of the pole many hundred times that he struggled to accomplish this feat. And after some time the messenger returned Riokan was so engrossed in his play that he felt annoyed at this interruption and did not pay any attention to his visitor. While the boy waited for some time and finally called out in a large voice real grandson I look here what does this answer mean my master is angry with me and has ordered me to ask you to take back the letter you wrote before and give me your real answer please do. Riokan had pity on the intruder and opened the letter he had written only a short time before and what was his surprise when he read. The bone turns round round. He broke into laughter, Oh dear me excuse me I made a mistake exclaimed. He then wrote another letter. But as his mind was filled with thoughts of the bowl and into play the answer didn't come easily. The great delight of real was playing with children in the village when he went down to make his food. And one fine autumn day when he was going quietly through the village he was suddenly disturbed by the sound of a voice. Apparently coming from a persistent tree. And turning his eyes to the place where the sound came from he's discovered a boy clinging in great fright to the top most branches and crying for help. Oh wait a moment my boy he said I'll help you down and then I'll pick some of the fruit for him. Riokan brought the boy safely to the ground and then began to pick the coveted fruit. He plucked one percent when Mom was about to hand it to the child when he decided that it would do well to taste it first, in order to give away the very best the first

persimmon was therefore thrust into his own mouth. How sweet he exclaimed he picked another and again stuffed it into his mouth. Good and again and again Simmons found their way into his mouth accompanied by the exclamation. Sweet our sweet. Meanwhile, the boy was waiting with open mouth at the foot of the tree, growing more desperate every moment. Riokan, last in rapture over the percent had entirely forgotten. Only when the boy shouted out in. Riokan to him selfe. Oh dear me he said Pardon me do forgive me I shall pick the best for you now the very best of all and as many as you like. Saying this Riokan dropped persimmons to the boy one by one all red am very sweet.

And then there was once someone told him that if you picked up money on the road it made you feel very happy. So, one day as he was traveling back to his home it if you thought he would try it and see what it was like. Accordingly, took some of the kindness which he had begged from the villagers and let them drop to the ground he didn't pick them up one by one but though he did this many times, he didn't experience any particular feeling of driveway I can't understand it he said They tell me that it is pleasant. Surely they wouldn't deceive me. He tried it again and again but always without and it was out. In the process of dropping and picking up his money he gradually lost all you had in the grass kind of a long time he had to search for the money, but he found it at last, and then when the crowd joy he exclaimed. Ah understand now to find money is certainly a delight. And once, when he was invited to stay in the home of some friends, they had to go out. And they asked him to watch the house and he got kind of sleepy. Cap was going to sleep on. Suddenly heard a funny noise, he thought it was a cat but there was the cannot sleep on his lap What was that Sam. You still need to the paper screen which separated the verandah from his run and peeped through it with childish curiosity. And there in his room, he saw a shabbily dressed man searching in a chest of drawers and taking clothes out of it. All he's a sneak thief thought really count. Of course Riokan didn't want a thief to take clothes from his friend's house. So he made up his mind to frighten the robber and drive him away. And therefore crash into the room and stand behind the thief. And the robber, utterly ignorant of this, went out of the WRONG with a packet of clothes and hastened into another room to look for Mott and Riokan follow stealth any stepping always about ten feet behind him and when the robber turned to the left he also quickly

went to the left and if the thief turned of the right real can do the same always just behind him another slight turn brought the robber almost in Riokan's direction but the priest was so quick that the thief didn't see him. It seemed a real count as if you were playing a game plan and, so absorbed had he become in the game, and before he knew it the thief had slipped away with a stolen package increased suddenly came to himself and realized what a serious mistake you made.

But his concern was not so much over the last thing his heart was full of pity for the feet. As he thought of his shabby clothes sad face. Late in the evening when the family returned them are full of dismay and they saw what happened but you can't just. Sat in silence and smile as usual. And among his written effects was found as curious little document. It just said, favorite things, cotton cap, how paper than money ball and marbles. Necessities: bamboo hat, gloves, stick, well. Things for travel some clothes and oil cake a bowl in the back don't forget to read this before stuff. Otherwise you will suffer from want.

He liked to smoke too. He was very fond of tobacco. And he always had a shabby old skin tobacco pouch which he kept his tobacco in very often it was empty and he would go out on the streets with his tobacco pouch tired at the end of a long stream down his back. People knew at once what he meant when they saw the power dangling behind him he would hasten to finish the tobacco. Among other things Riokan very famous as it can be great for years and writing was great it promised. And it was a bar to who used to go to be a. Very much wanted a specimen of his writing to hang on a crack in one of the hanging scroll as was not real congress wouldn't get that. Well one day. In the middle of shaving his head in the bar stopped and left him and said Now I want to go on finish saving unless you give me the piece of writing I want so immediately real can write it for him. And then the barber finish shaving him the mother couldn't read and some days later when somebody who could read came into his shop said Why this inscription is incomplete there's a well missing so next time we'll count came by. The Bible said but you didn't write the full inscription or no I know he said I didn't write the full inscription because you didn't shave all of my hand the missing work you'll find I've written the same inscription to put the missing word in twice at the home of an old widow who always

gives me extra bean curd when I needed. Such, by anecdotes, is the temper of a man who is profoundly at home in the world. And difficult to think about, difficult to talk about. Because, to praise such a character is to tempt one, to imitate him. And one can only imitate him by not doing so at all, but by being just completely oneself.
